Algorithms Laboratory

Heuristic  
Optimization in  
Production and  
Logistics

# Instructor Biographies

- Stefan Wagner
  - Full professor for complex software systems (since 2009)  
University of Applied Sciences Upper Austria
  - Co-founder of the HEAL research group
  - Project manager and chief architect of HeuristicLab
  - PhD in technical sciences (2009)  
Johannes Kepler University Linz, Austria
  - Associate professor (2005 – 2009)  
University of Applied Sciences Upper Austria
  - <http://heal.heuristiclab.com/team/wagner>
- Gabriel Kronberger
  - Full professor for business intelligence (since 2011)  
University of Applied Sciences Upper Austria
  - Member of the HEAL research group
  - Architect of HeuristicLab
  - PhD in technical sciences (2010)  
Johannes Kepler University Linz, Austria
  - Research assistant (2005 – 2011)  
University of Applied Sciences Upper Austria
  - <http://heal.heuristiclab.com/team/kronberger>

# Agenda

- Objectives of the Tutorial
- Introduction
- Where to get HeuristicLab?
- Plugin Infrastructure
- Graphical User Interface
- Available Algorithms & Problems
- **Demonstration Part I: Working with HeuristicLab**
- **Demonstration Part II: Data-based Modeling**
- Some Additional Features
- Planned Features
- Team
- Suggested Readings
- Bibliography
- Questions & Answers

# Objectives of the Tutorial

- Introduce general motivation and design principles of HeuristicLab
- Show where to get HeuristicLab
- Explain basic GUI usability concepts
- Demonstrate basic features
- Demonstrate editing and analysis of optimization experiments
- Demonstrate custom algorithms and graphical algorithm designer
- Demonstrate data-based modeling features
- Outline some additional features

# Introduction

- Motivation and Goals
  - graphical user interface
  - paradigm independence
  - multiple algorithms and problems
  - large scale experiments and analyses
  - parallelization
  - extensibility, flexibility and reusability
  - visual and interactive algorithm development
  - multiple layers of abstraction
  
- Facts
  - development of HeuristicLab started in 2002
  - based on Microsoft .NET and C#
  - used in research and education
  - second place at the *Microsoft Innovation Award 2009*
  - open source (GNU General Public License)
  - version 3.3.0 released on May 18th, 2010
  - latest version 3.3.10 "Vancouver" released on July 10th, 2014

# Where to get HeuristicLab?

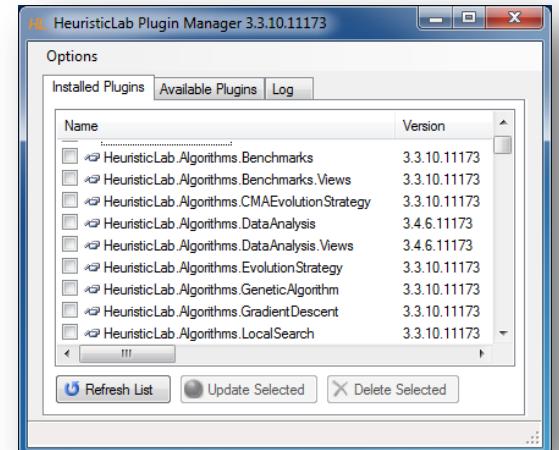

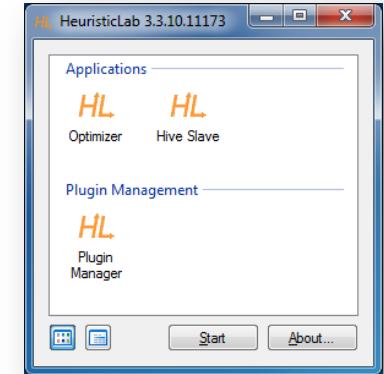

- Download binaries
  - deployed as ZIP archives
  - latest stable version 3.3.10 "Vancouver"
    - released on July 10th, 2014
  - daily trunk builds
  - <http://dev.heuristiclab.com/download>
- Check out sources
  - SVN repository
  - HeuristicLab 3.3.10 tag
    - <http://svn.heuristiclab.com/svn/core/tags/3.3.10>
  - Stable development version
    - <http://svn.heuristiclab.com/svn/core/stable>
- License
  - GNU General Public License (Version 3)
- System requirements
  - Microsoft .NET Framework 4.0 Full Version
  - enough RAM and CPU power ;-)

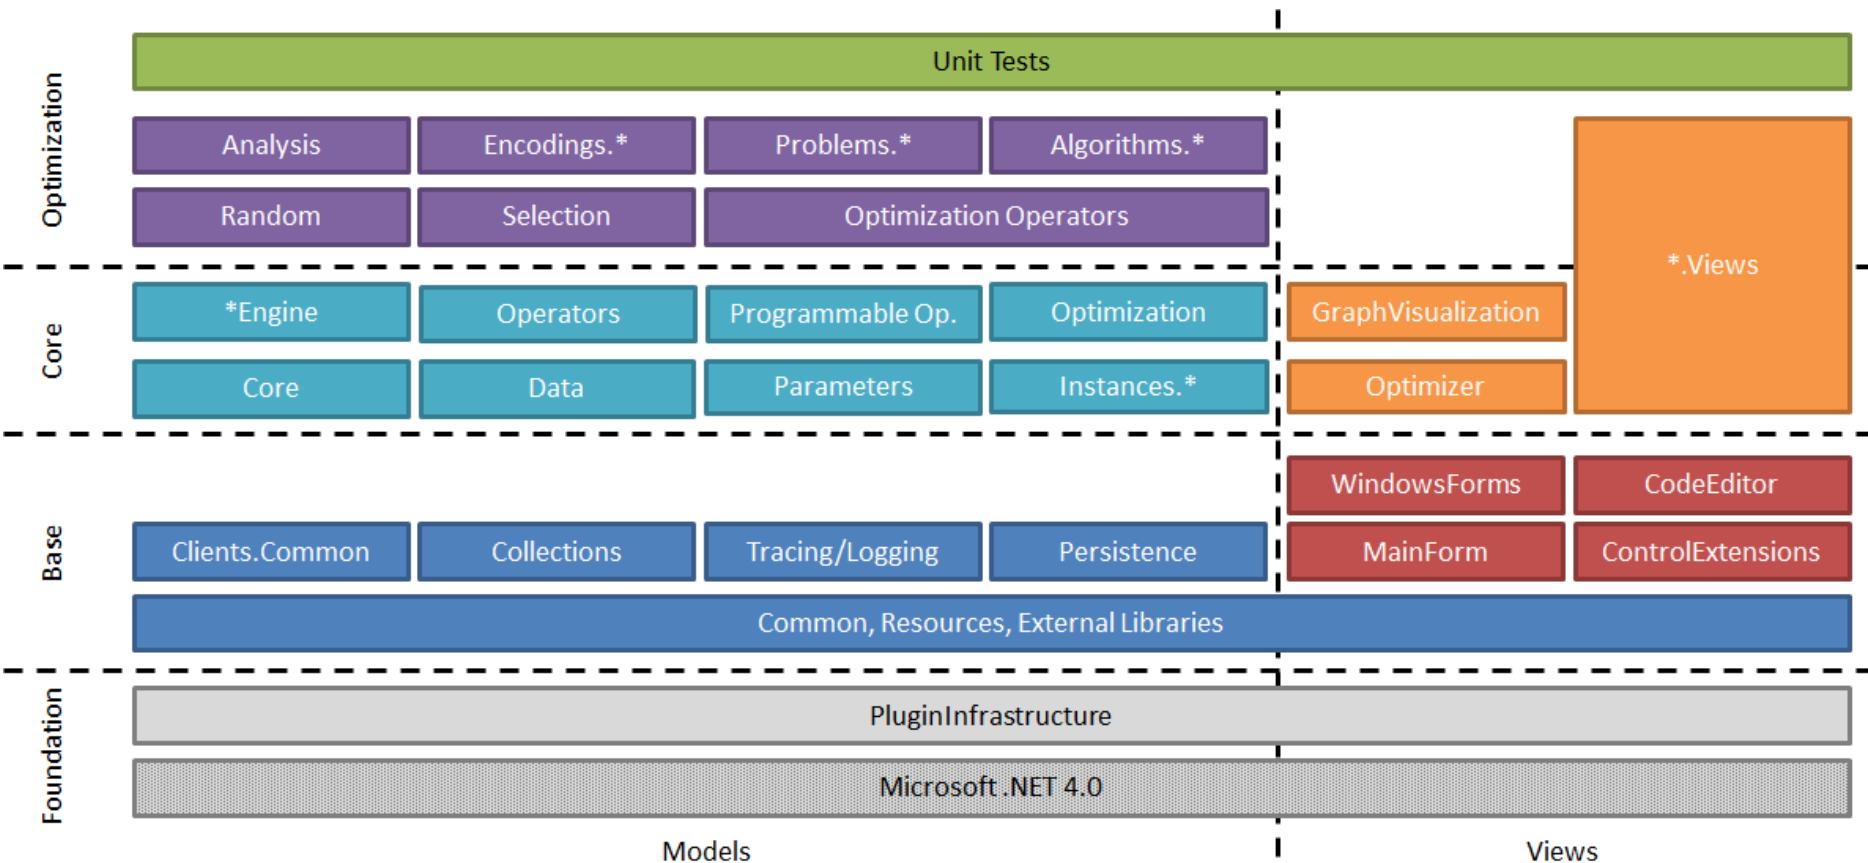

The screenshot shows the HeuristicLab website homepage. At the top right is the orange 'HL' logo and the text 'HeuristicLab'. Below it is a navigation bar with links for Home, News, Download, Features, Documentation, Support, and Search. A sub-navigation bar for 'WikiStart' is also present. The main content area features a brief introduction about HeuristicLab being a framework for heuristic and evolutionary algorithms developed by the Heuristic and Evolutionary Algorithms Laboratory (HEAL) since 2002. It highlights the graphical user interface, algorithm prototyping, and various features like Genetic Programming, Data Analysis, and Experiment Design and Analysis. A 'HeuristicLab Tour' video player is embedded in the page. To the right, there's a sidebar with a download button for 'HeuristicLab 3.3.10 .NET4, Any CPU Changelog', a 'Research & Publications' section with a photo of the development team, a 'License' section with the GPL logo, a 'Contribute' section with a yellow people icon, and a 'Join the discussion at the HeuristicLab group' section with an email input field and a 'Subscribe' button. At the bottom, there's a 'Thank you!' message, a 'ReSharper' sponsorship note, and a 'Last modified 6 weeks ago' footer.

# Plugin Infrastructure

- HeuristicLab consists of many assemblies
  - 142 plugins in HeuristicLab 3.3.10
  - plugins can be loaded or unloaded at runtime
  - plugins can be updated via internet
  - application plugins provide GUI frontends
- Extensibility
  - developing and deploying new plugins is easy
  - dependencies are explicitly defined, automatically checked and resolved
  - automatic discovery of interface implementations (service locator pattern)
- Plugin Manager
  - GUI to check, install, update or delete plugins

# Plugin Architecture

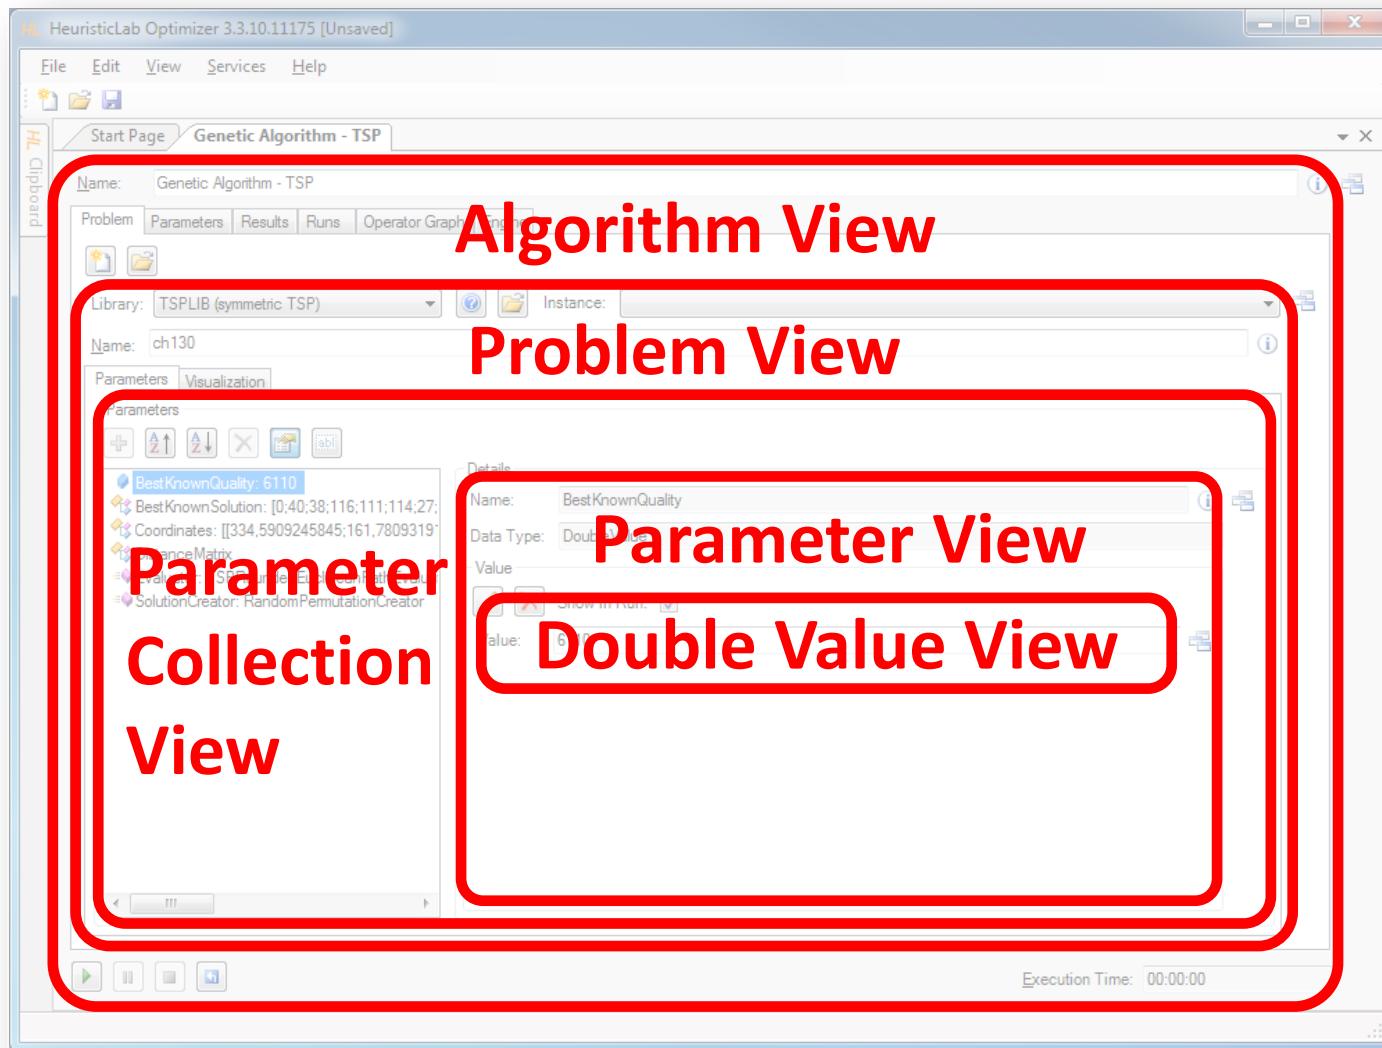

# Graphical User Interface

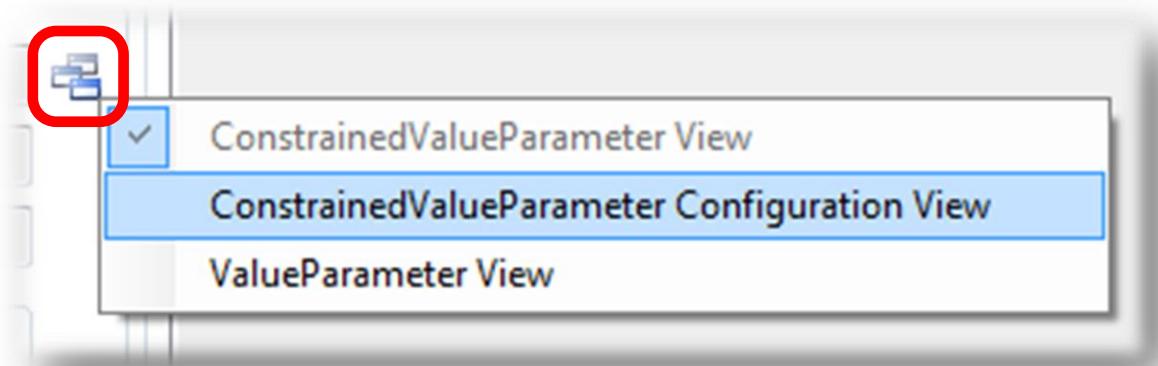

- HeuristicLab GUI is made up of views
  - views are visual representations of content objects
  - views are composed in the same way as their content
  - views and content objects are loosely coupled
  - multiple different views may exist for the same content
- Drag & Drop
  - views support drag & drop operations
  - content objects can be copied or moved (shift key)
  - enabled for collection items and content objects

# Graphical User Interface

# Graphical User Interface

- ViewHost
  - control which hosts views
  - right-click on windows icon to switch views
  - double-click on windows icon to open another view
  - drag & drop windows icon to copy contents

# Available Algorithms

## Population-based

- CMA-ES
- Evolution Strategy
- Genetic Algorithm
- Offspring Selection Genetic Algorithm
- Island Genetic Algorithm
- Island Offspring Selection Genetic Algorithm
- SASEGASA
- Relevant Alleles Preserving GA (RAPGA)
- Genetic Programming
- NSGA-II
- Scatter Search
- Particle Swarm Optimization

## Trajectory-based

- Local Search
- Tabu Search
- Robust Taboo Search
- Variable Neighborhood Search
- Simulated Annealing

## Data Analysis

- Linear Discriminant Analysis
- Linear Regression
- Multinomial Logit Classification
- k-Nearest Neighbor
- k-Means
- Neighbourhood Component Analysis
- Artificial Neural Networks
- Random Forests
- Support Vector Machines
- Gaussian Processes

## Additional Algorithms

- User-defined Algorithm
- Performance Benchmarks
- Hungarian Algorithm
- Cross Validation
- LM-BFGS

# Available Problems

## Combinatorial Problems

- Traveling Salesman
- Vehicle Routing
- Knapsack
- Job Shop Scheduling
- Linear Assignment
- Quadratic Assignment
- OneMax

## Additional Problems

- Single-Objective Test Function
- User-defined Problem
- External Evaluation Problem  
(Anylogic, Scilab, MATLAB)
- Regression, Classification, Clustering
- Trading
- Grammatical Evolution

## Genetic Programming Problems

- Symbolic Classification
- Symbolic Regression
- Symbolic Time-Series Prognosis
- Artificial Ant
- Lawn Mower

# Agenda

- Objectives of the Tutorial
- Introduction
- Where to get HeuristicLab?
- Plugin Infrastructure

- Questions & Answers

# Demonstration Part I: Working with HeuristicLab

- Create, Parameterize and Execute Algorithms
- Save and Load Items
- Create Batch Runs and Experiments
- Multi-core CPUs and Parallelization
- Analyze Runs
- Analyzers
- Building User-Defined Algorithms

# HeuristicLab Optimizer

HL HeuristicLab Optimizer 3.3.10.11175

File Edit View Services Help

Start Page

## HeuristicLab Optimizer 3.3.10.11175

Follow these steps to start working with HeuristicLab Optimizer:

1. Open an algorithm
  - click (New Item) in the toolbar and select an algorithm or click (Open File) in the toolbar and load an algorithm from a file
2. Open a problem in the algorithm
  - in the Problem tab of the algorithm click (New Problem) and select a problem or click (Open Problem) and load a problem from a file
3. Set parameters
  - set problem parameters in the Problem tab of the algorithm
  - set algorithm parameters in the Parameters tab of the algorithm
4. Run the algorithm
  - click (Start/Resume Algorithm) to execute the algorithm (if the button is grayed out some parameters of the algorithm or the problem still have to be set)
  - wait for the algorithm to terminate or click (Pause Algorithm) to interrupt its execution or click (Stop Algorithm) to stop its execution
5. Check results
  - check the results on the Results tab of the algorithm
  - click (Start/Resume Algorithm) to continue the algorithm or click (Reset Algorithm) to prepare a new run

Looking for predefined algorithms which can be executed immediately?

- check out the **sample algorithms** below

Any feedback, questions, problems or requests for new features?

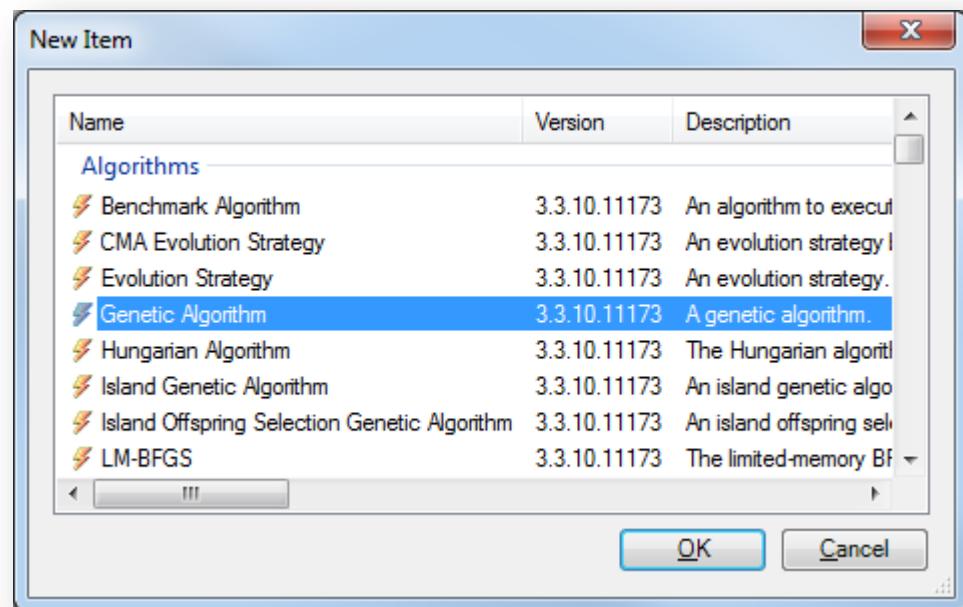

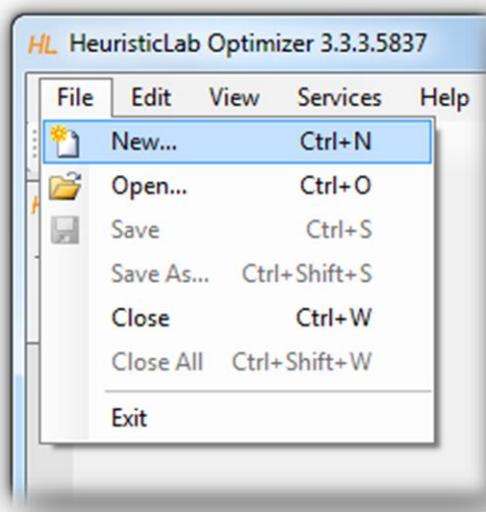

- visit the HeuristicLab trac at <http://dev.heuristiclab.com>
- watch the HeuristicLab video tutorials at <http://www.youtube.com/heuristiclab>
- join the HeuristicLab mailing list <mailto:heuristiclab@googlegroups.com>
- visit the HeuristicLab facebook site at <http://www.facebook.com/heuristiclab>
- write an e-mail to <mailto:support@heuristiclab.com> to contact the HeuristicLab

Show Start Page on Startup

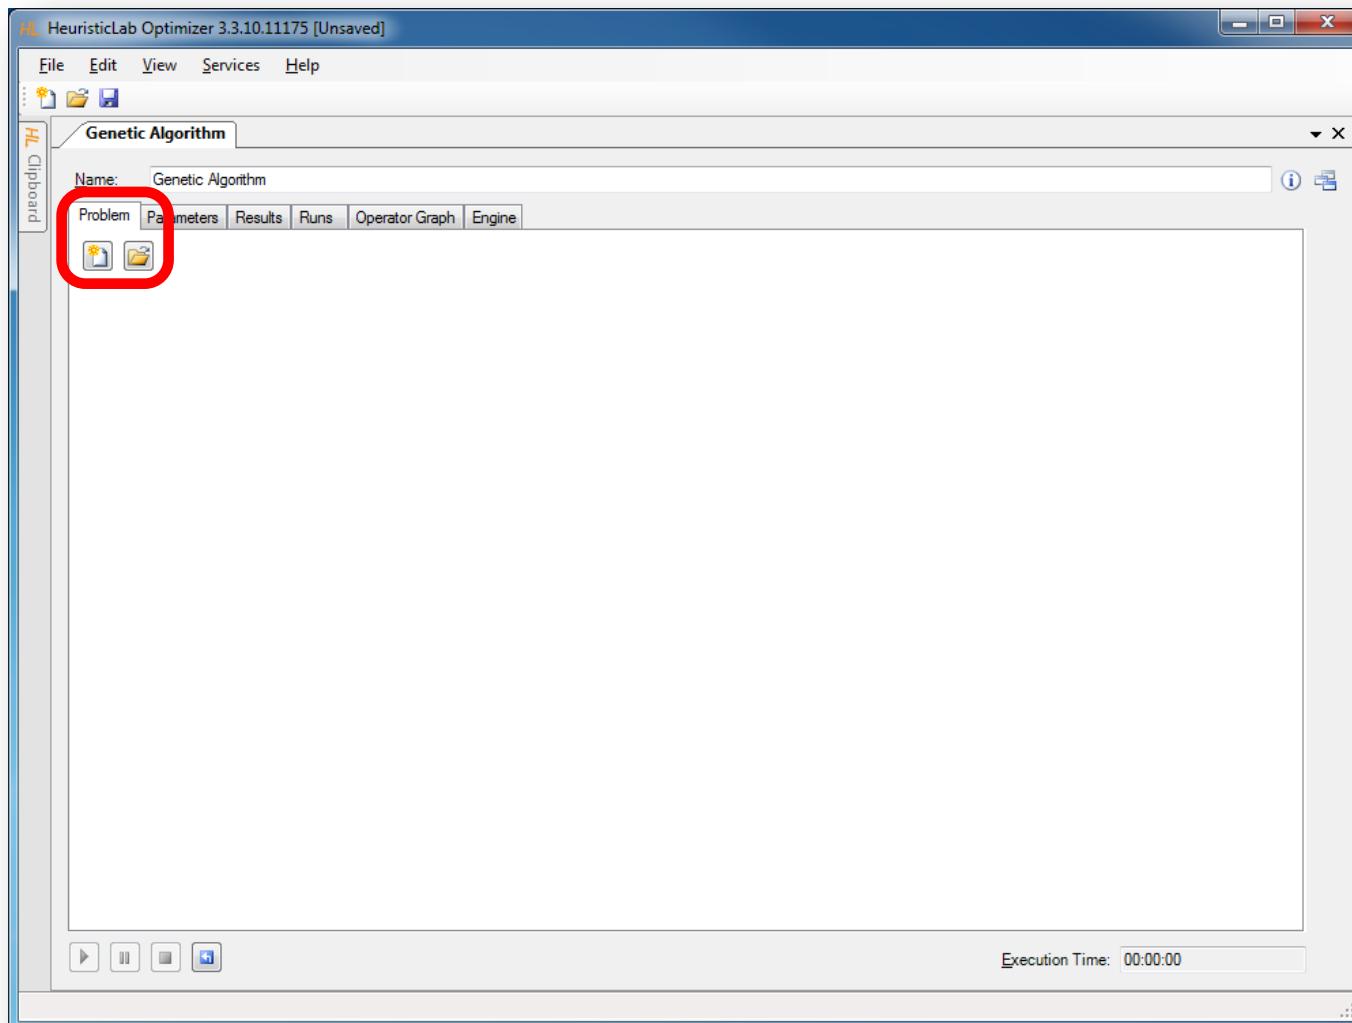

**double-click to open sample algorithms and problems**

Name	Description
Standard Problems	
Evolution Strategy - Griewank	An evolution strat
Genetic Algorithm - TSP	A genetic algorith
Genetic Algorithm - VRP	A genetic algorith
Genetic Programming - Artificial Ant	A standard geneti
Genetic Programming - Multiplexer 11 problem	A genetic program
Grammatical Evolution - Artificial Ant (SantaFe)	Grammatical evoluti
Island Genetic Algorithm - TSP	An island genetic
Local Search - Knapsack	A local search alg
Particle Swarm Optimization - Schwefel	A particle swarm o
Particle Swarm Optimization - Rastrigin	A particle swarm o
Scatter Search - TSP	A scatter search a
Simulated Annealing - Rastrigin	A simulated anneal
Taillard Benchmark Problem	A taillard search alg
Taillard Benchmark Problem	A taillard search alg
Variable Neighborhood Search - TSP	A variable neighb
Data Analysis	
Gaussian Process Regression	A Gaussian proce
Genetic Programming - Symbolic Classification	A standard geneti
Genetic Programming - Symbolic Regression	A standard geneti
Genetic Programming - Time Series Prediction (Mackey-Glass-17)	A genetic program
Grammatical Evolution - Symbolic Regression (Poly-10)	Grammatical evoluti
Scripts	
Genetic Algorithm Script - QAP	A scripted genetic
GUI Automation Script	A script that runs
Offspring Selection Genetic Algorithm Script - Rastrigin	A scripted offsprin

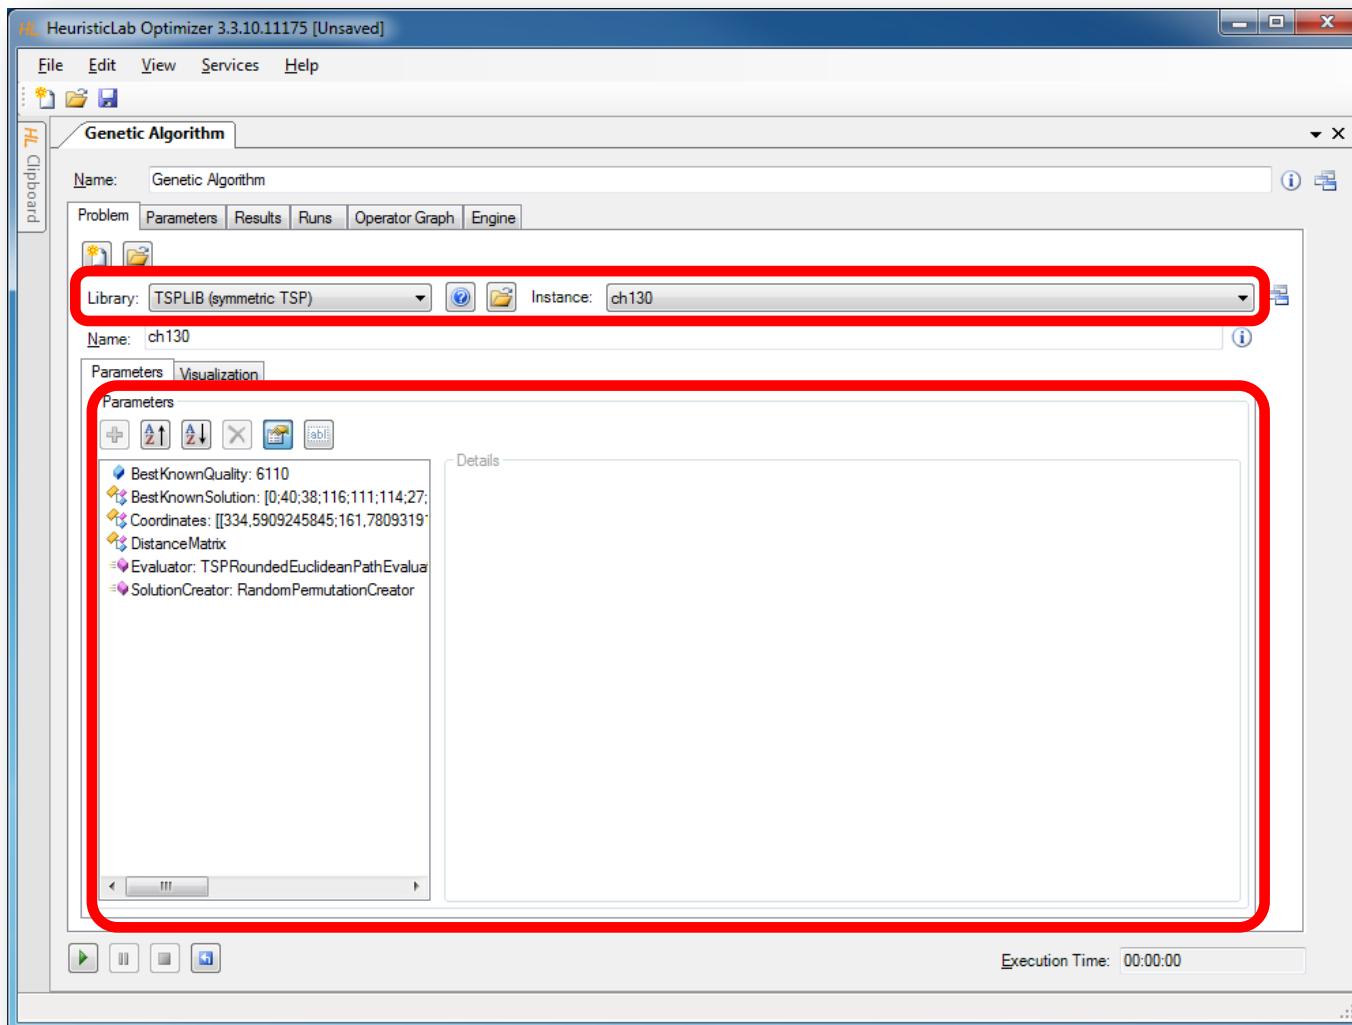

# Create Algorithm

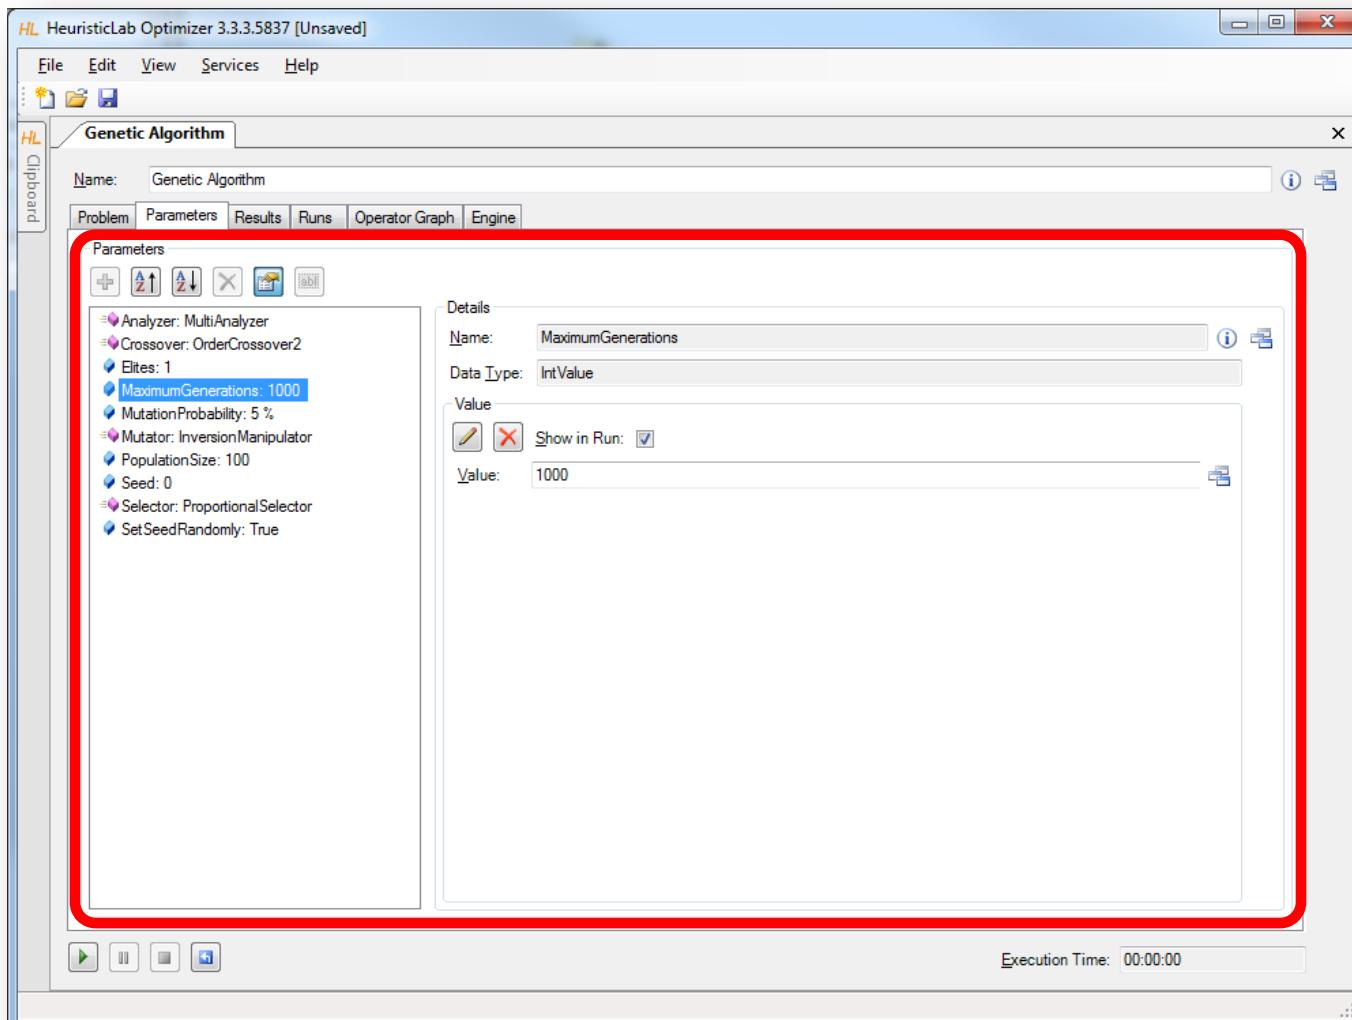

# Create or Load Problem

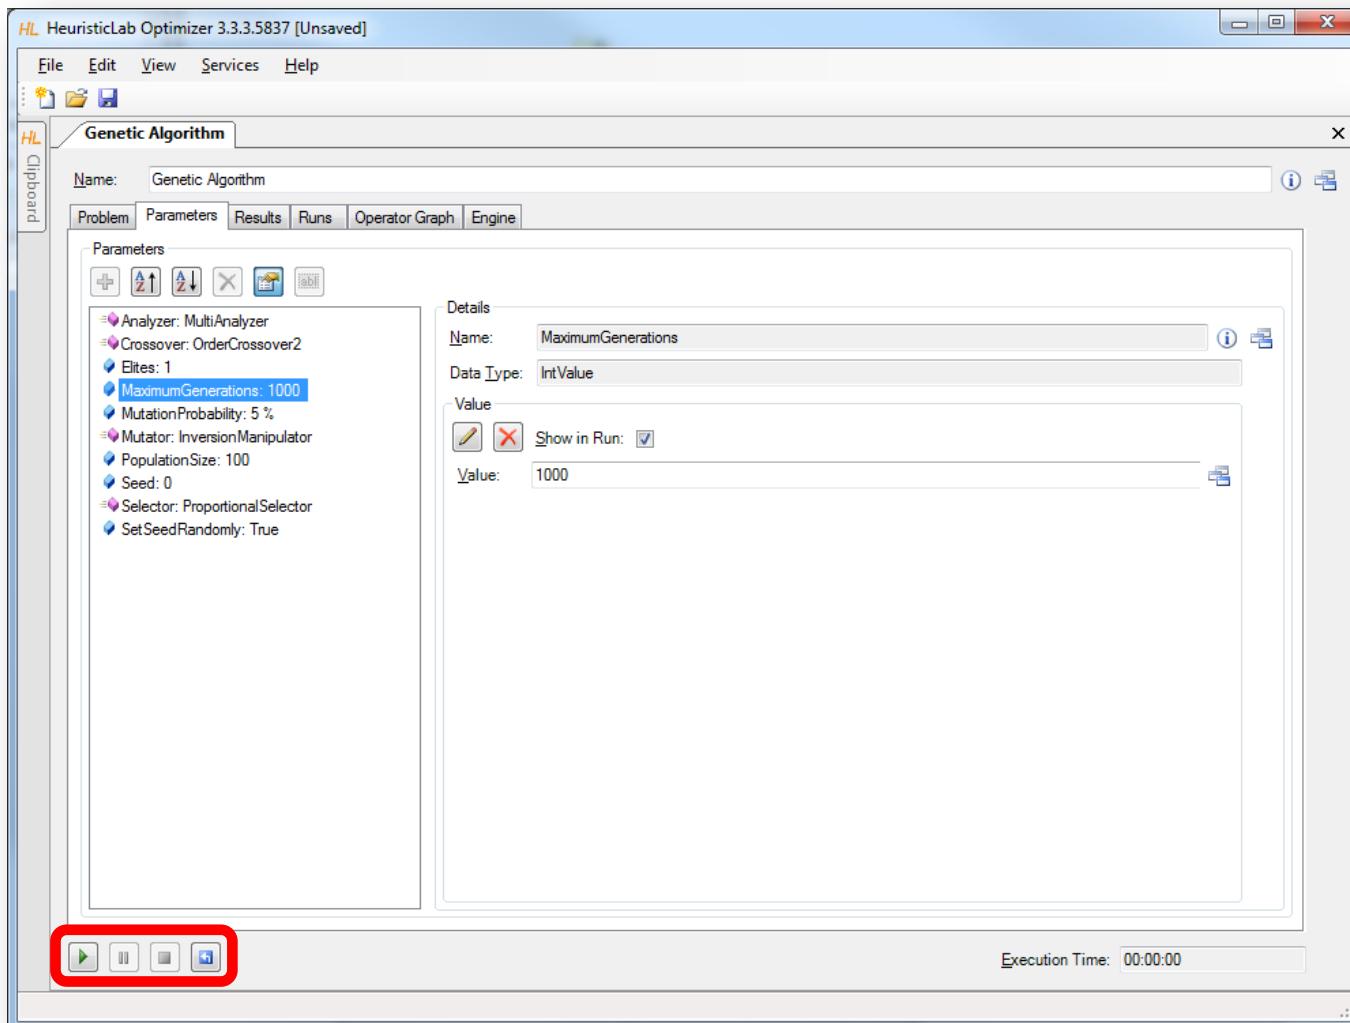

# Import or Parameterize Problem Data

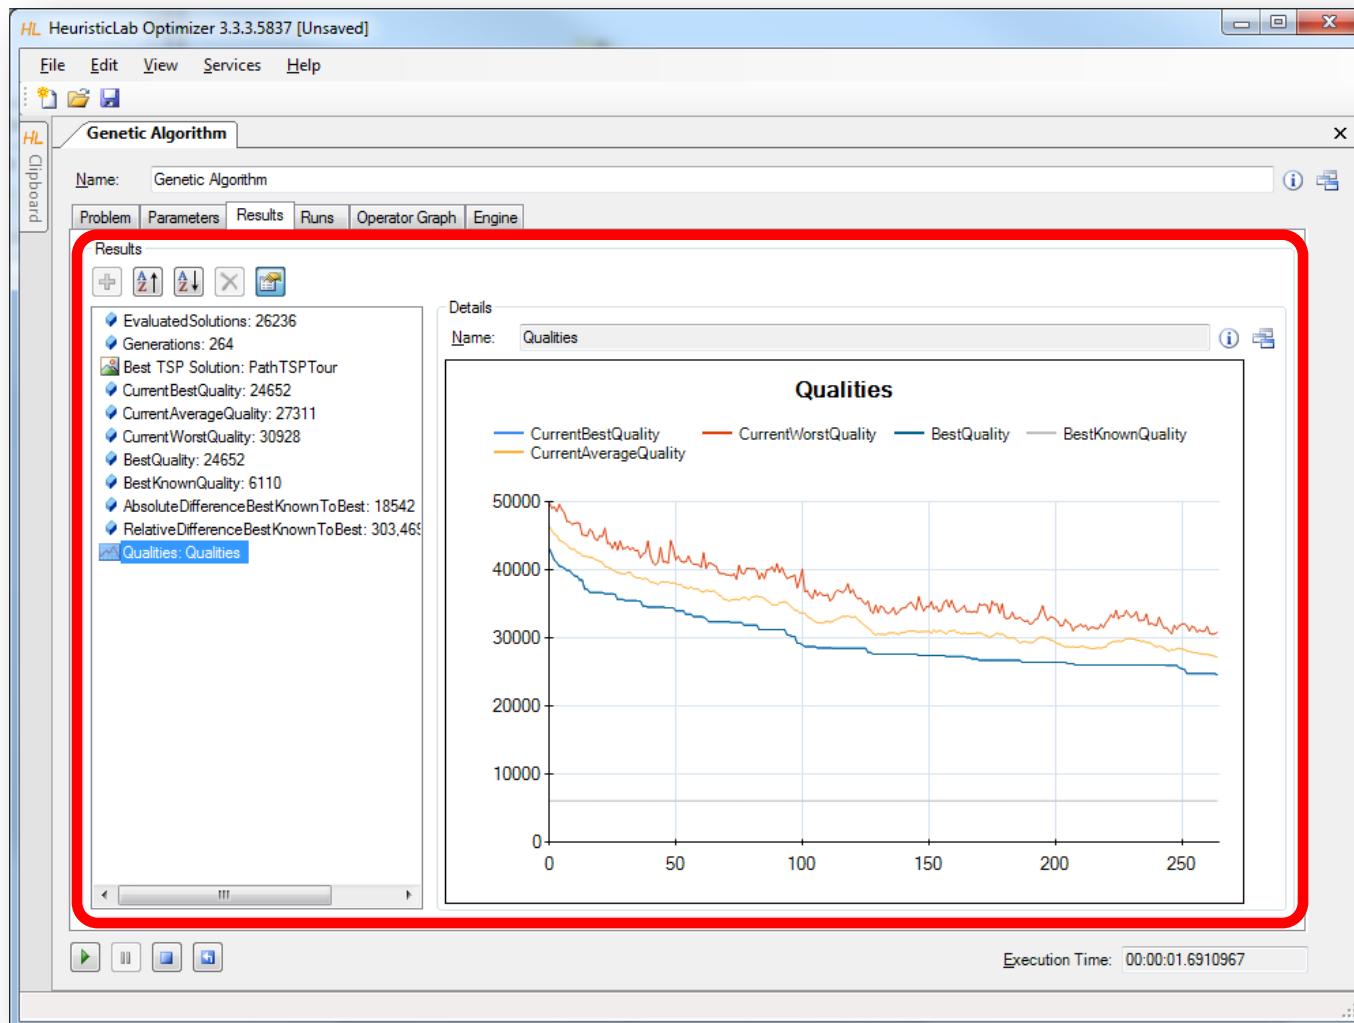

# Parameterize Algorithm

# Start, Pause, Resume, Stop and Reset

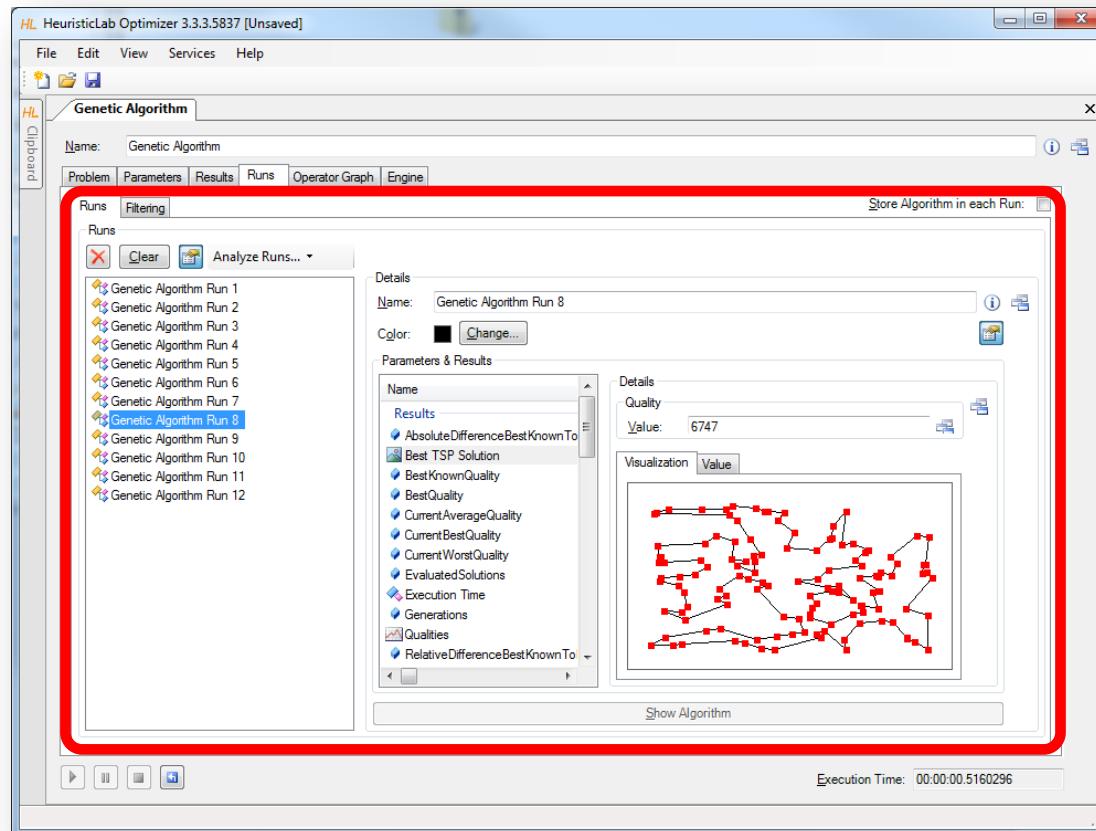

# Inspect Results

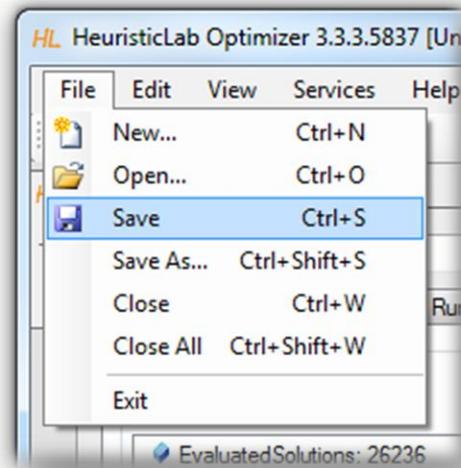

# Compare Runs

- A run is created each time when the algorithm is stopped
  - runs contain all results and parameter settings
  - previous results are not forgotten and can be compared

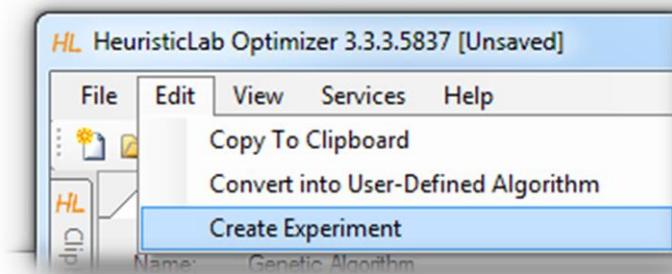

# Save and Load

- Save to and load from disk
  - HeuristicLab items (i.e., algorithms, problems, experiments, ...) can be saved to and loaded from a file
  - algorithms can be paused, saved, loaded and resumed
  - data format is custom compressed XML
  - saving and loading files might take several minutes
  - saving and loading large experiments requires some memory

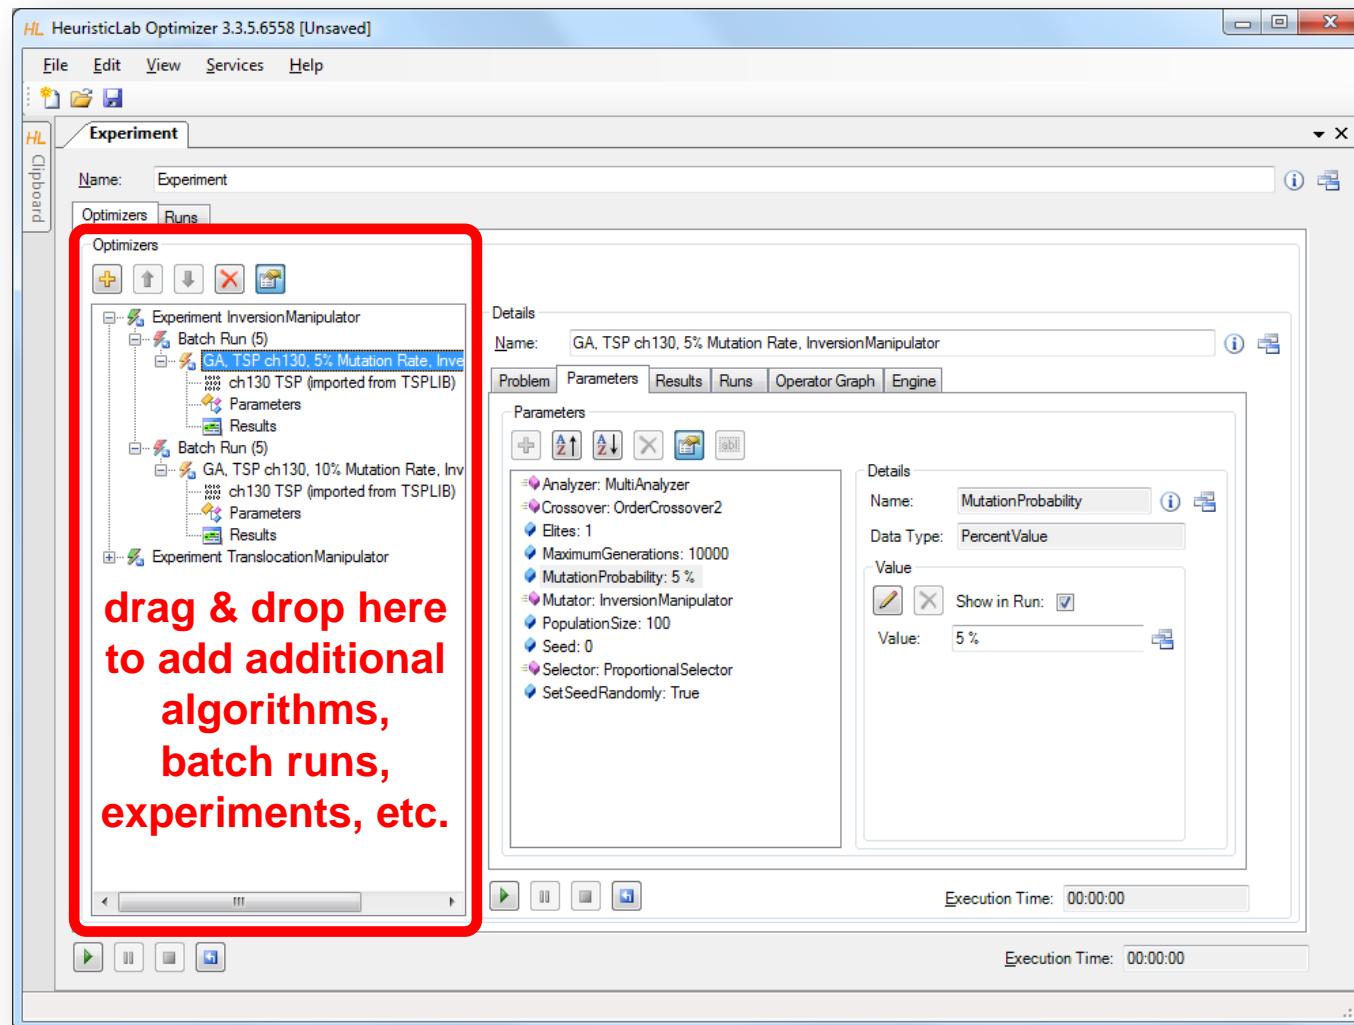

# Create Batch Runs and Experiments

- Batch runs
  - execute the same optimizer (e.g. algorithm, batch run, experiment) several times
- Experiments
  - execute different optimizers
  - suitable for large scale algorithm comparison and analysis
- Experiments and batch runs can be nested
- Generated runs can be compared afterwards

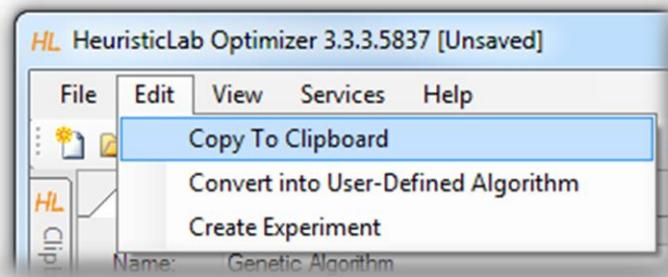

# Create Batch Runs and Experiments

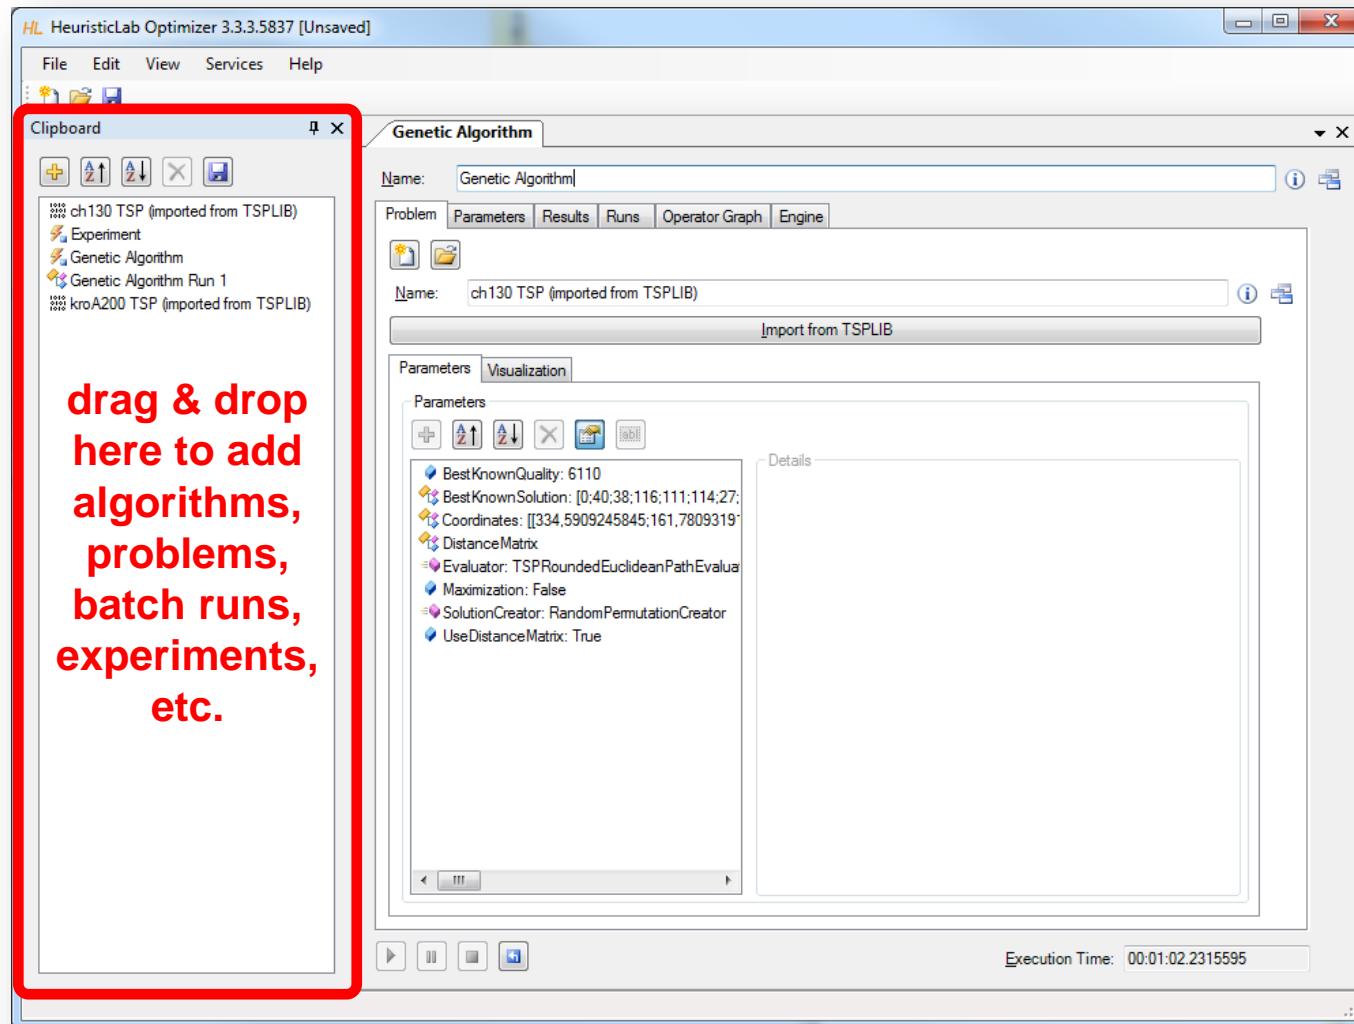

# Clipboard

- Store items
  - click on the buttons to add or remove items
  - drag & drop items on the clipboard
  - use the menu to add a copy of a shown item to the clipboard

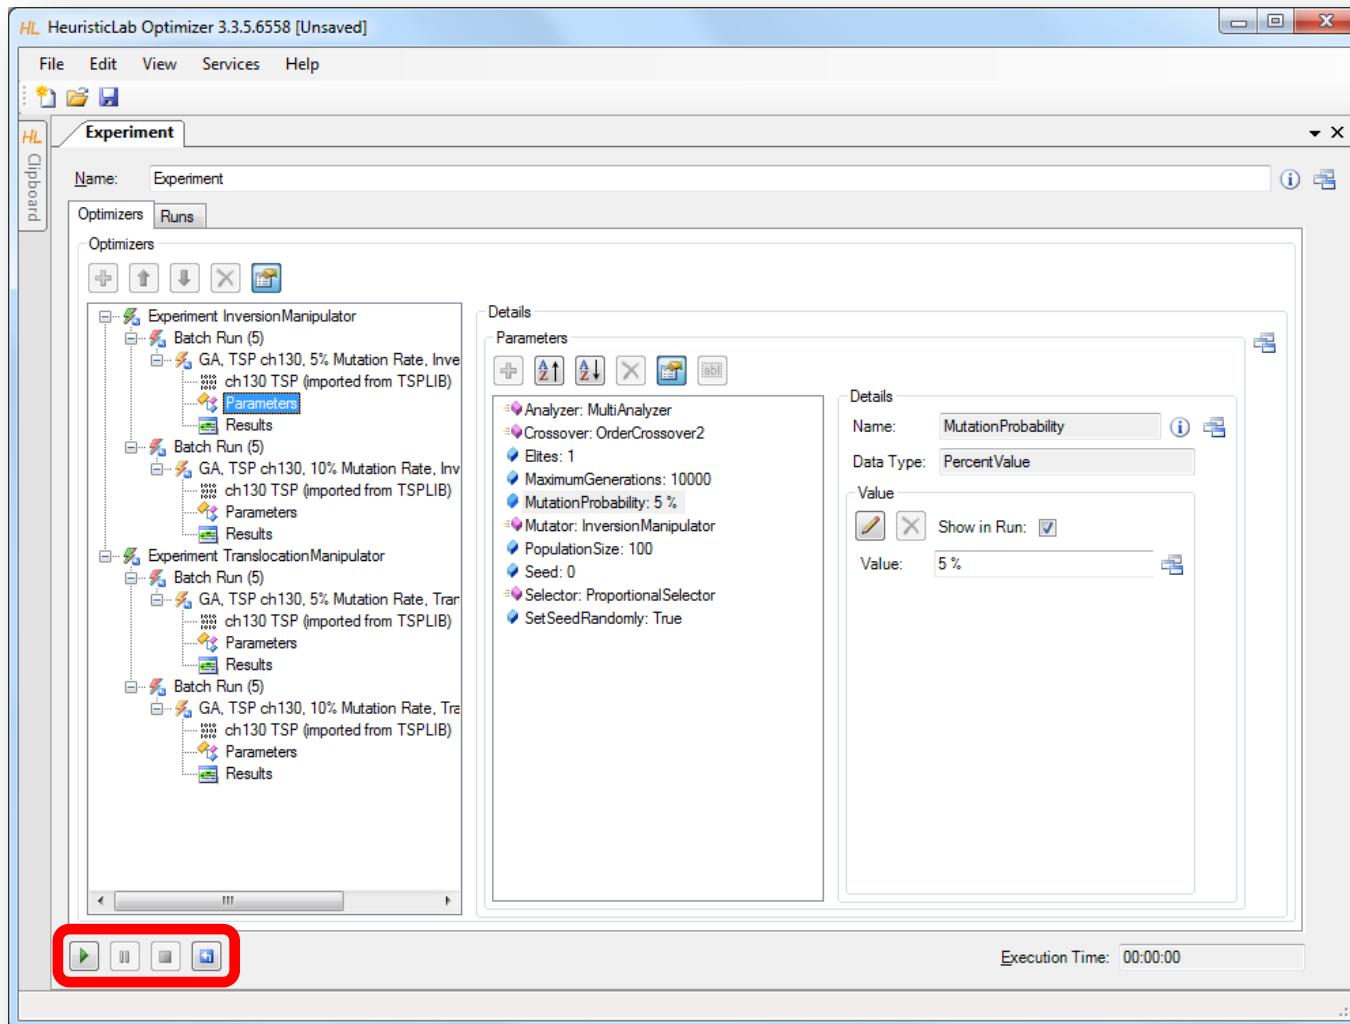

- Show items
  - double-click on an item in the clipboard to show its view
- Save and restore clipboard content
  - click on the save button to write the clipboard content to disk
  - clipboard is automatically restored when HeuristicLab is started the next time

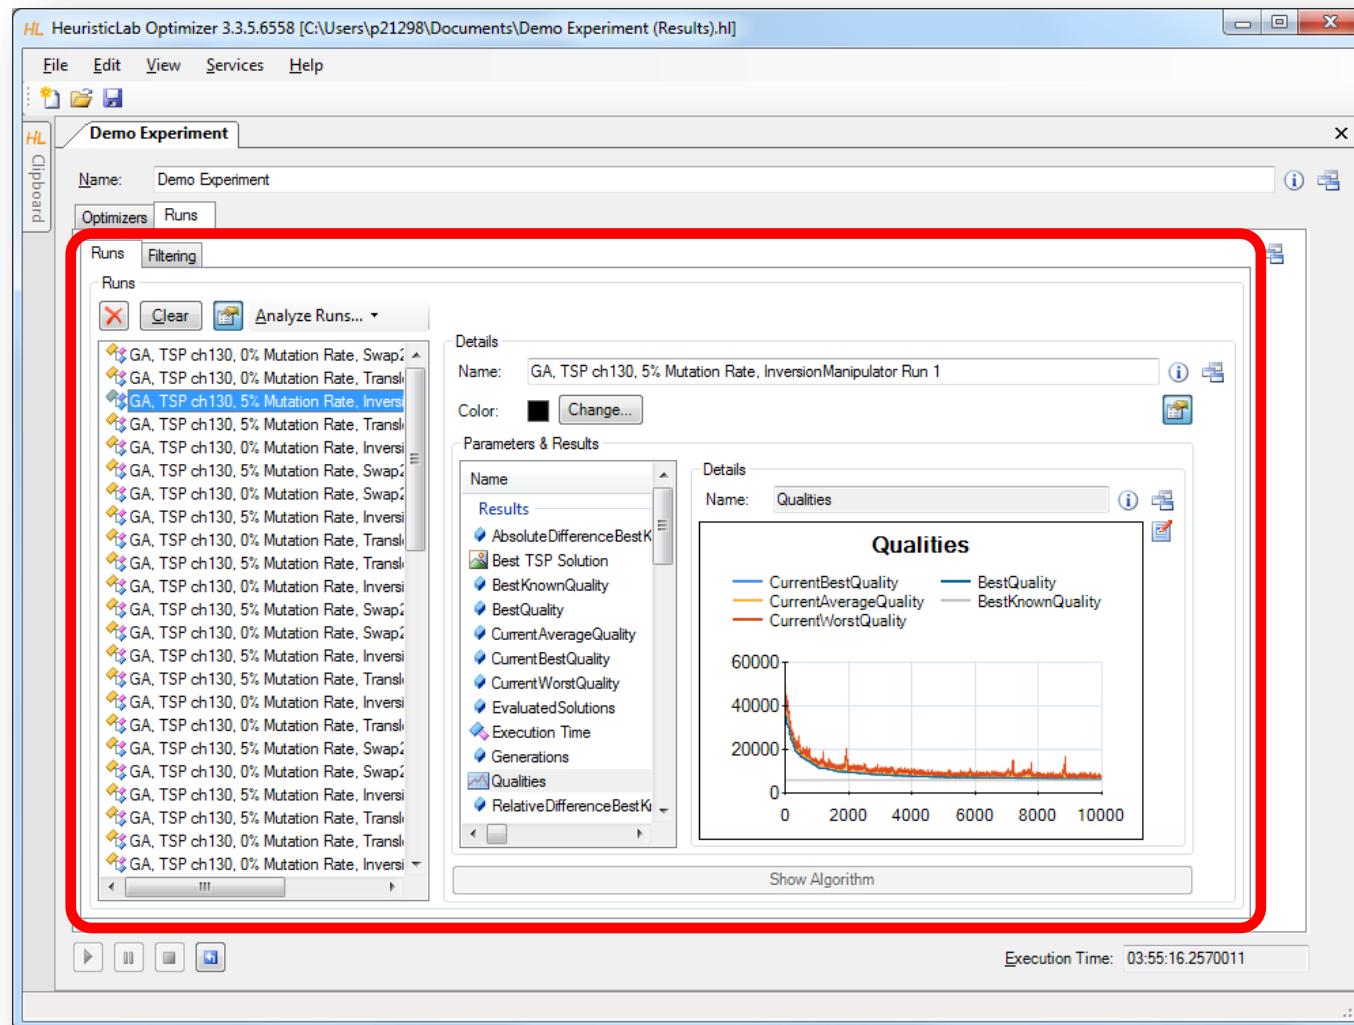

# Clipboard

# Start, Pause, Resume, Stop, Reset

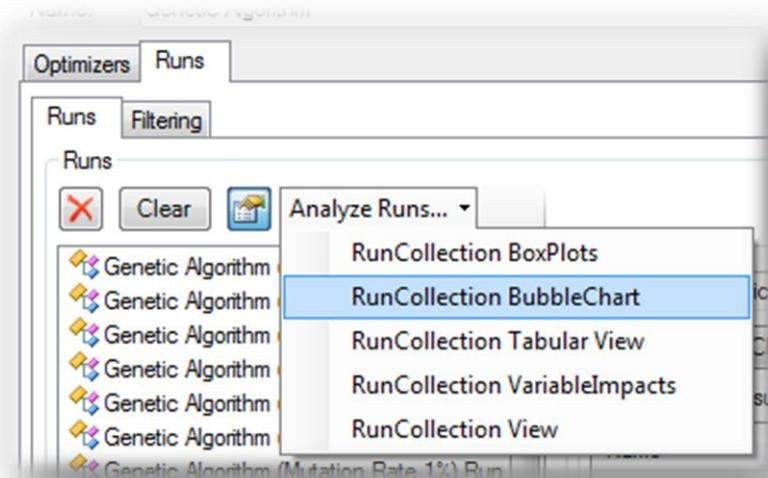

# Compare Runs

# Analyze Runs

- HeuristicLab provides interactive views to analyze and compare all runs of a run collection
  - textual analysis
    - RunCollection Tabular View
  - graphical analysis
    - RunCollection BubbleChart
    - RunCollection BoxPlots
- Filtering is automatically applied to all open run collection views

# Runs – Tabular View

# Runs – Tabular View

- Sort columns
  - click on column header to sort column
  - Ctrl-click on column header to sort multiple columns
- Show or hide columns
  - right-click on table to open dialog to show or hide columns
- Compute statistical values
  - select multiple numerical values to see count, sum, minimum, maximum, average and standard deviation
- Select, copy and paste into other applications

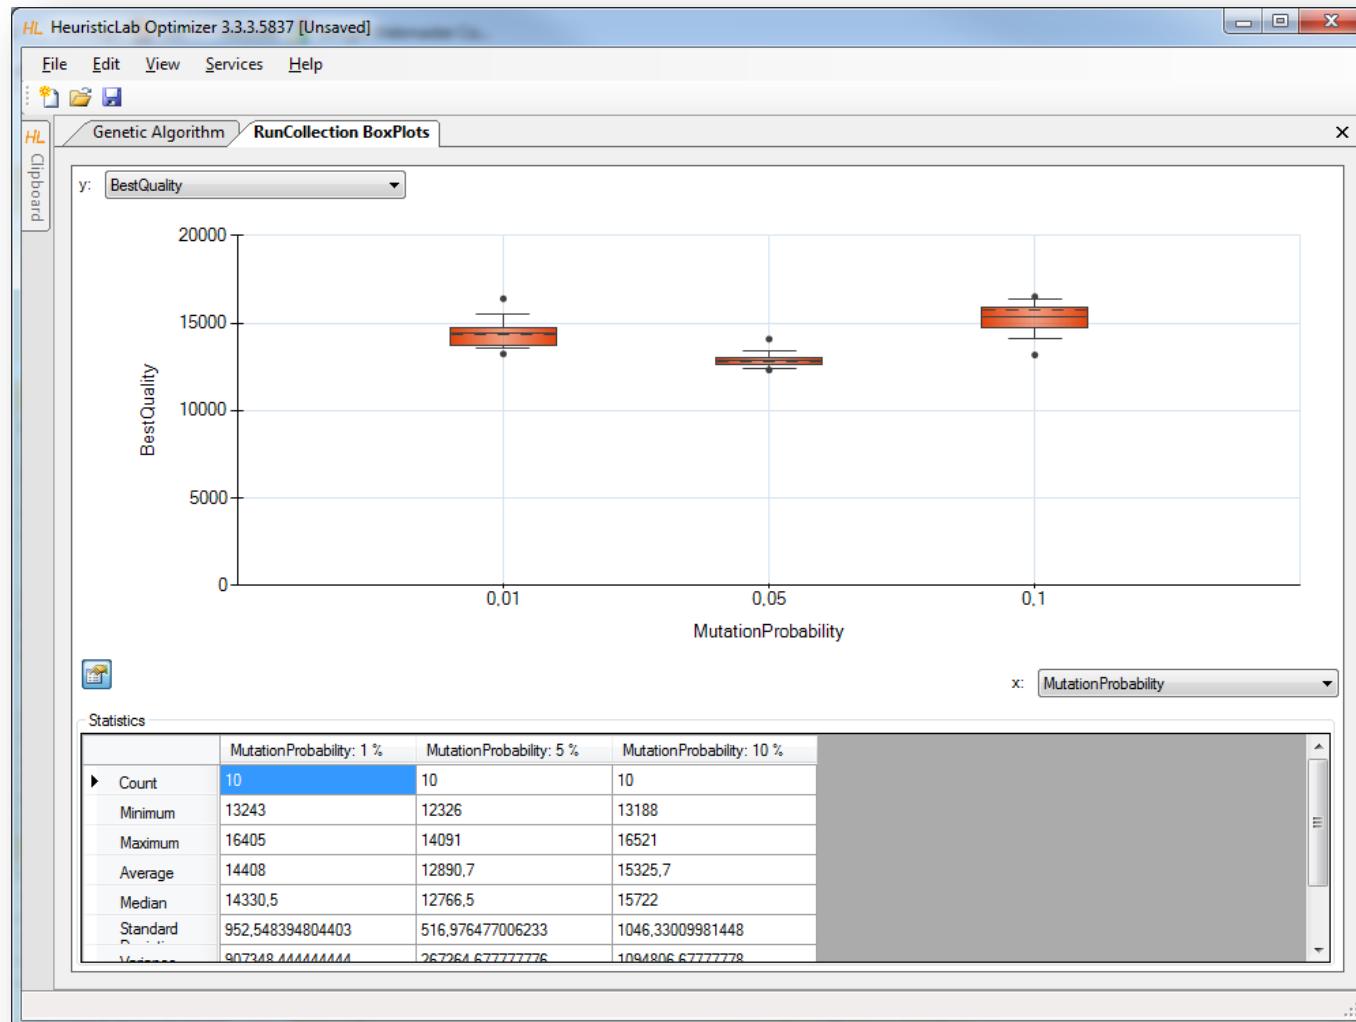

# Runs – BubbleChart

# Runs – BubbleChart

- Choose values to plot
  - choose which values to show on the x-axis, the y-axis and as bubble size
  - possible values are all parameter settings and results
- Add jitter
  - add jitter to separate overlapping bubbles
- Zoom in and out
  - click on Zoom and click and drag in the chart area to zoom in
  - double click on the chart area background or on the circle buttons beside the scroll bars to zoom out
- Color bubbles
  - click on Select, choose a color and click and drag in the chart area to select and color bubbles
  - apply coloring automatically by clicking on the axis coloring buttons
- Show runs
  - double click on a bubble to open its run
- Export image
  - right-click to open context menu to copy or save image
  - save image as pixel (BMP, JPG, PNG, GIF, TIF) or vector graphics (EMF)
- Show box plots
  - right-click to open context menu to show box plots view

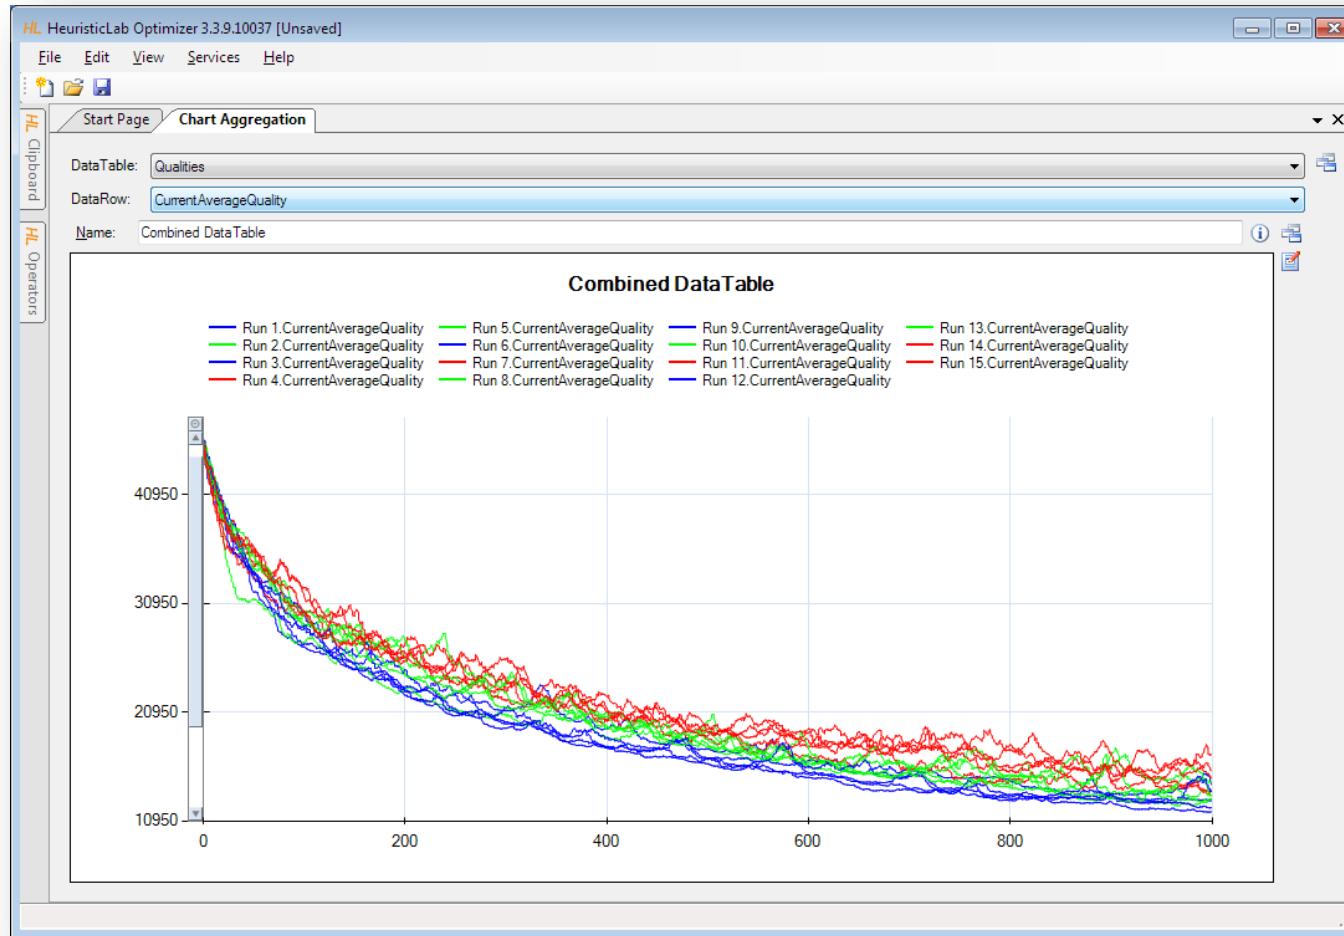

# Runs – BoxPlots

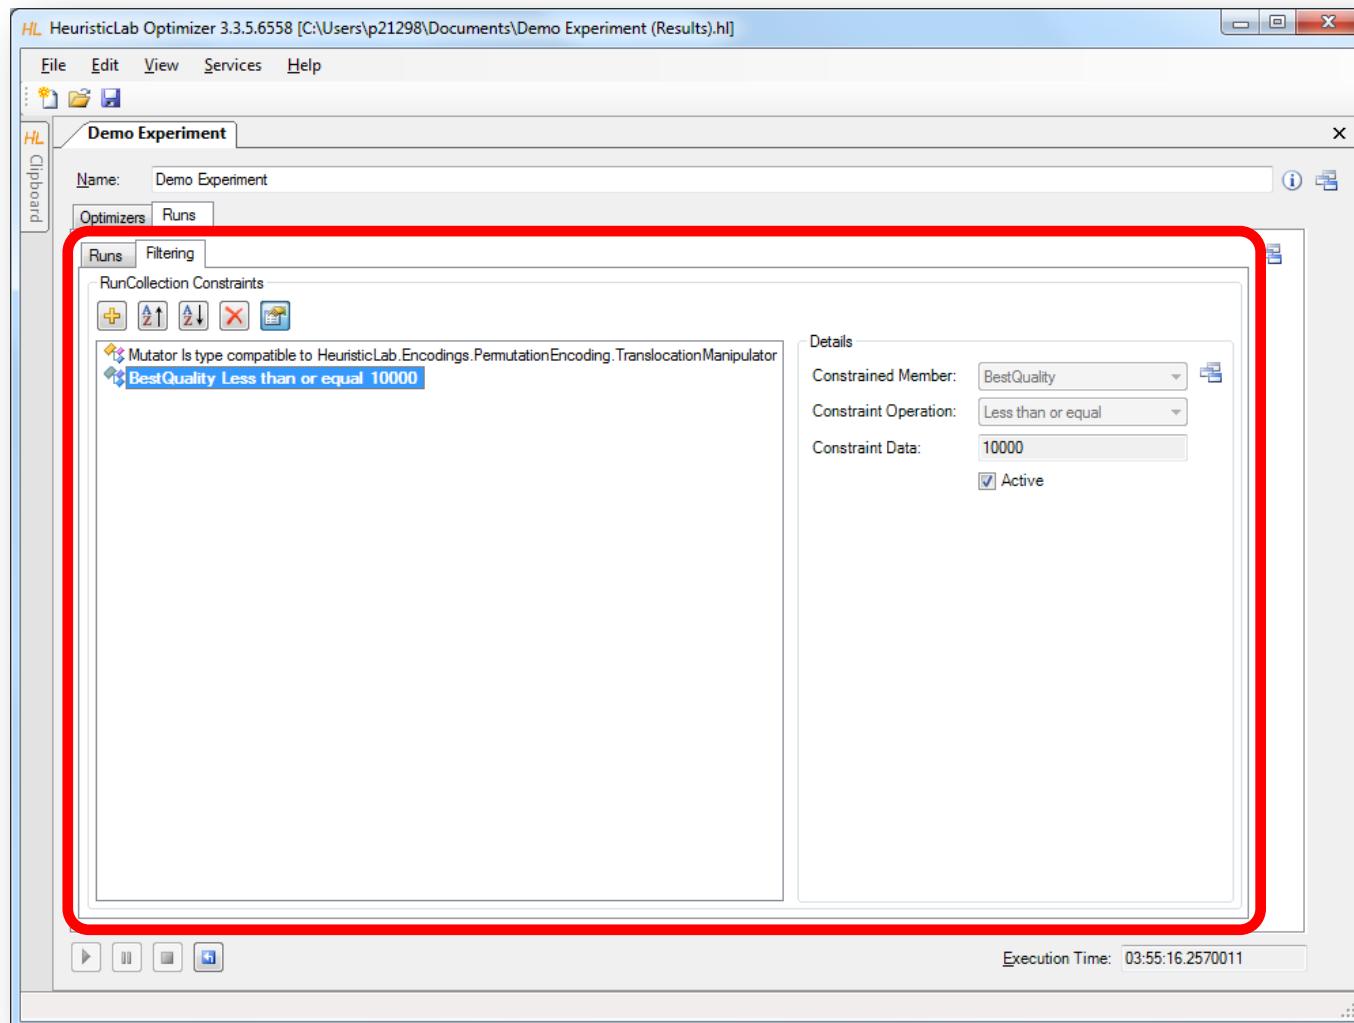

# Runs – BoxPlots

- Choose values to plot
  - choose which values to show on the x-axis and y-axis
  - possible values are all parameter settings and results
- Zoom in and out
  - click on Zoom and click and drag in the chart area to zoom in
  - double click on the chart area background or on the circle buttons beside the scroll bars to zoom out
- Show or hide statistical values
  - click on the lower left button to show or hide statistical values
- Export image
  - right-click to open context menu to copy or save image
  - save image as pixel (BMP, JPG, PNG, GIF, TIF) or vector graphics (EMF)

# Runs – Multi-Line Chart

# Filter Runs

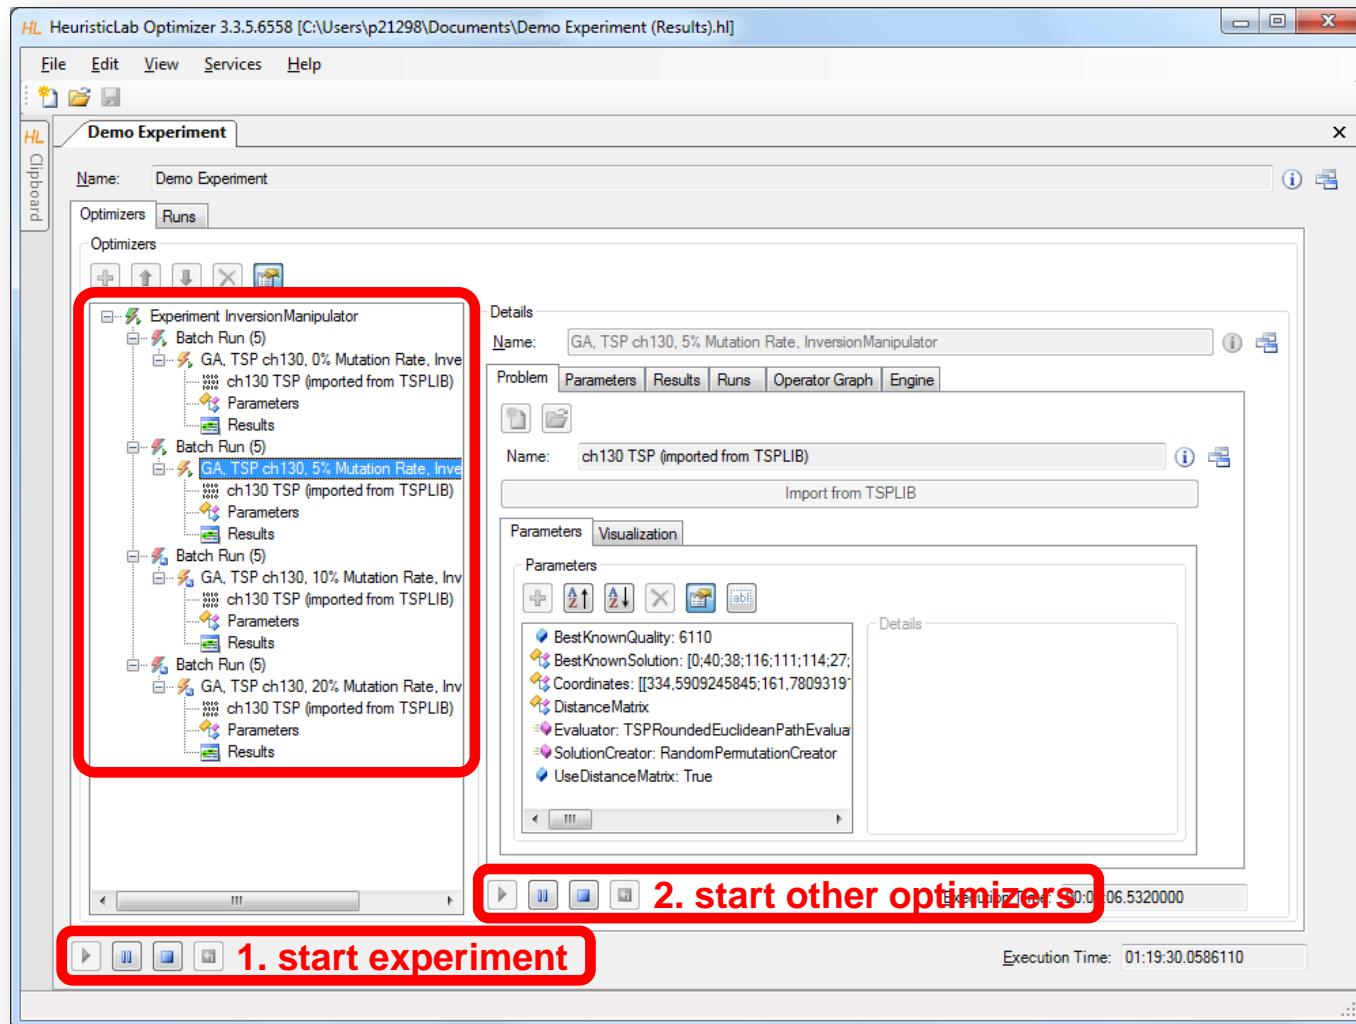

# Multi-core CPUs and Parallelization

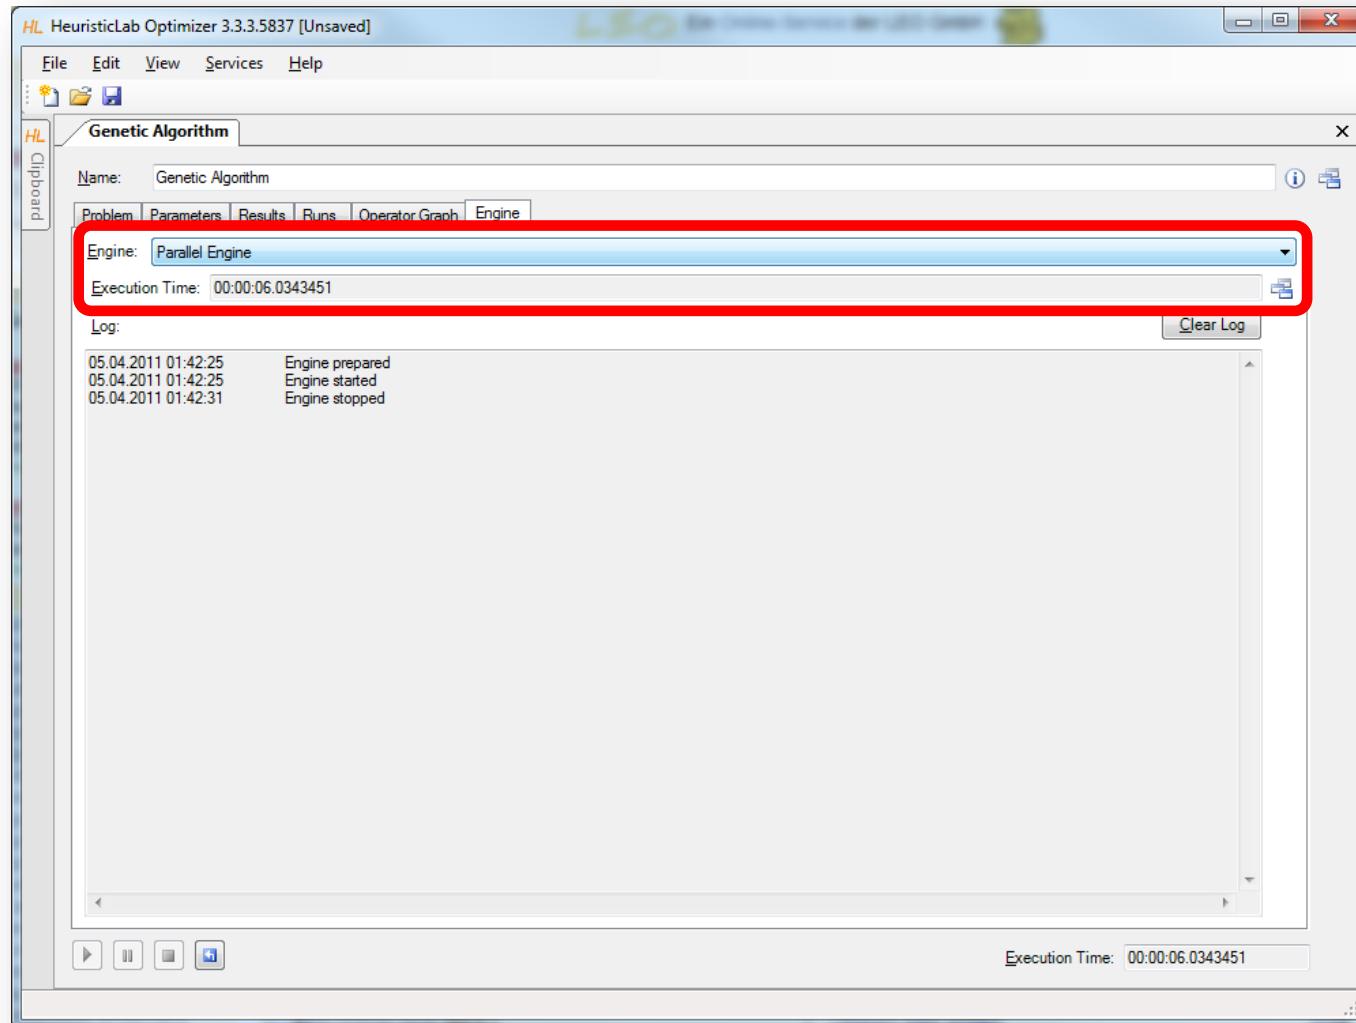

- Parallel execution of optimizers in experiments
  - optimizers in an experiment are executed sequentially from top to bottom per default
  - experiments support parallel execution of their optimizers
  - select a not yet executed optimizer and start it manually to utilize another core
  - execution of one of the next optimizers is started automatically after an optimizer is finished
- Parallel execution of algorithms
  - HeuristicLab provides special operators for parallelization
  - engines decide how to execute parallel operations
  - sequential engine executes everything sequentially
  - parallel engine executes parallel operations on multiple cores
  - Hive engine (under development) executes parallel operations on multiple computers
  - all implemented algorithms support parallel solution evaluation

# Parallel Execution of Experiments

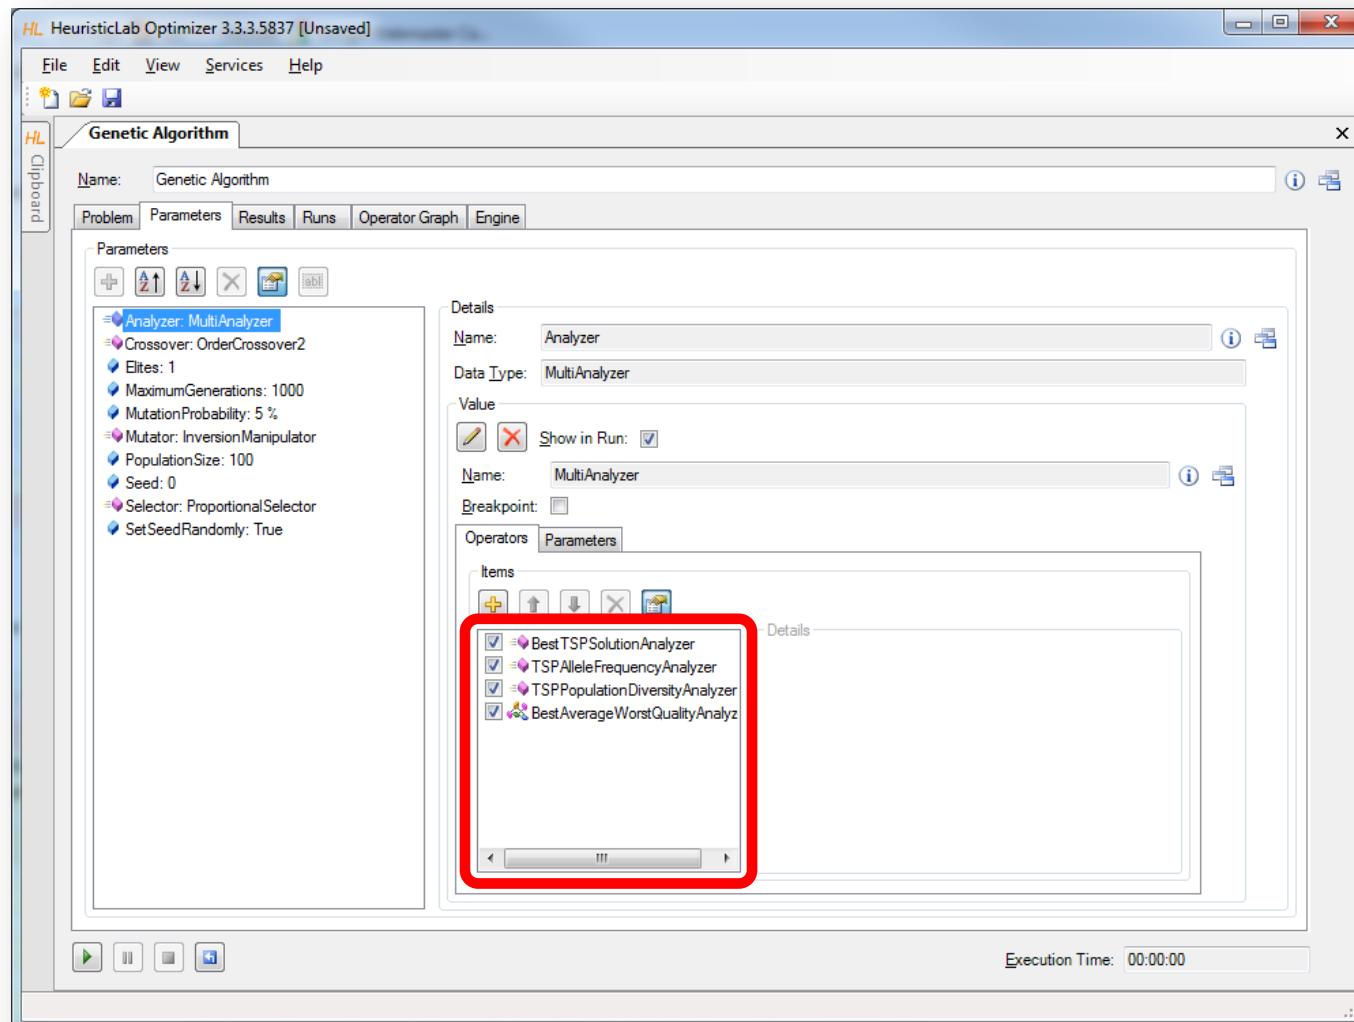

# Parallel Execution of Algorithms

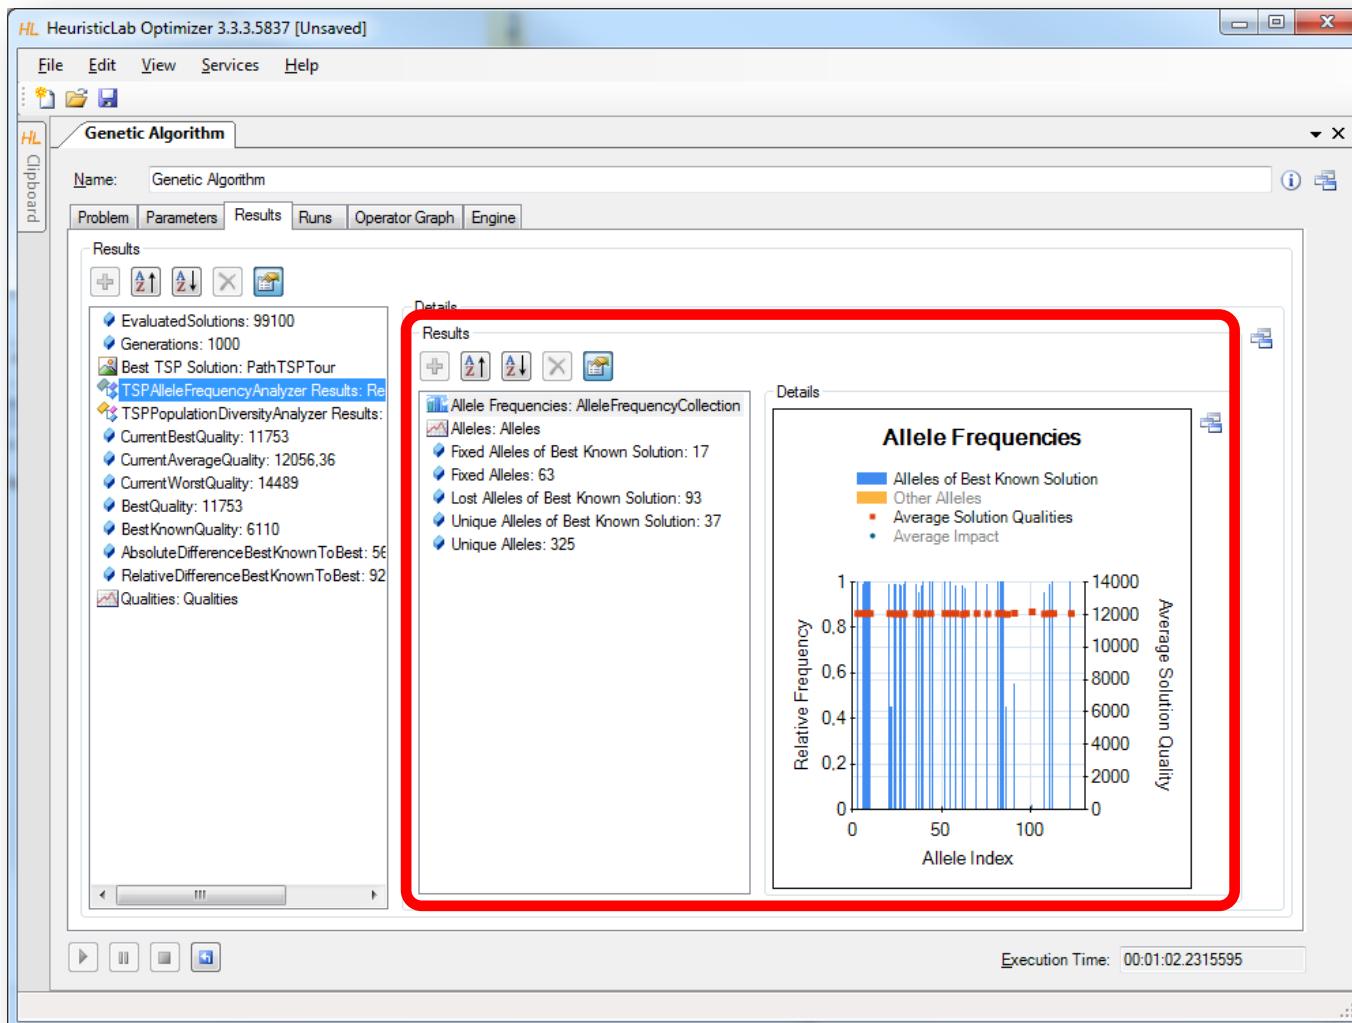

# Analyzers

- Special operators for analysis purposes
  - are executed after each iteration
  - serve as general purpose extension points of algorithms
  - can be selected and parameterized in the algorithm
  - perform algorithm-specific and/or problem-specific tasks
  - some analyzers are quite costly regarding runtime and memory
  - implementing and adding custom analyzers is easy
- Examples
  - TSPAlleleFrequencyAnalyzer
  - TSPPopulationDiversityAnalyzer
  - SuccessfulOffspringAnalyzer
  - SymbolicDataAnalysisVariableFrequencyAnalyzer
  - SymbolicRegressionSingleObjectiveTrainingBestSolutionAnalyzer
  - ...

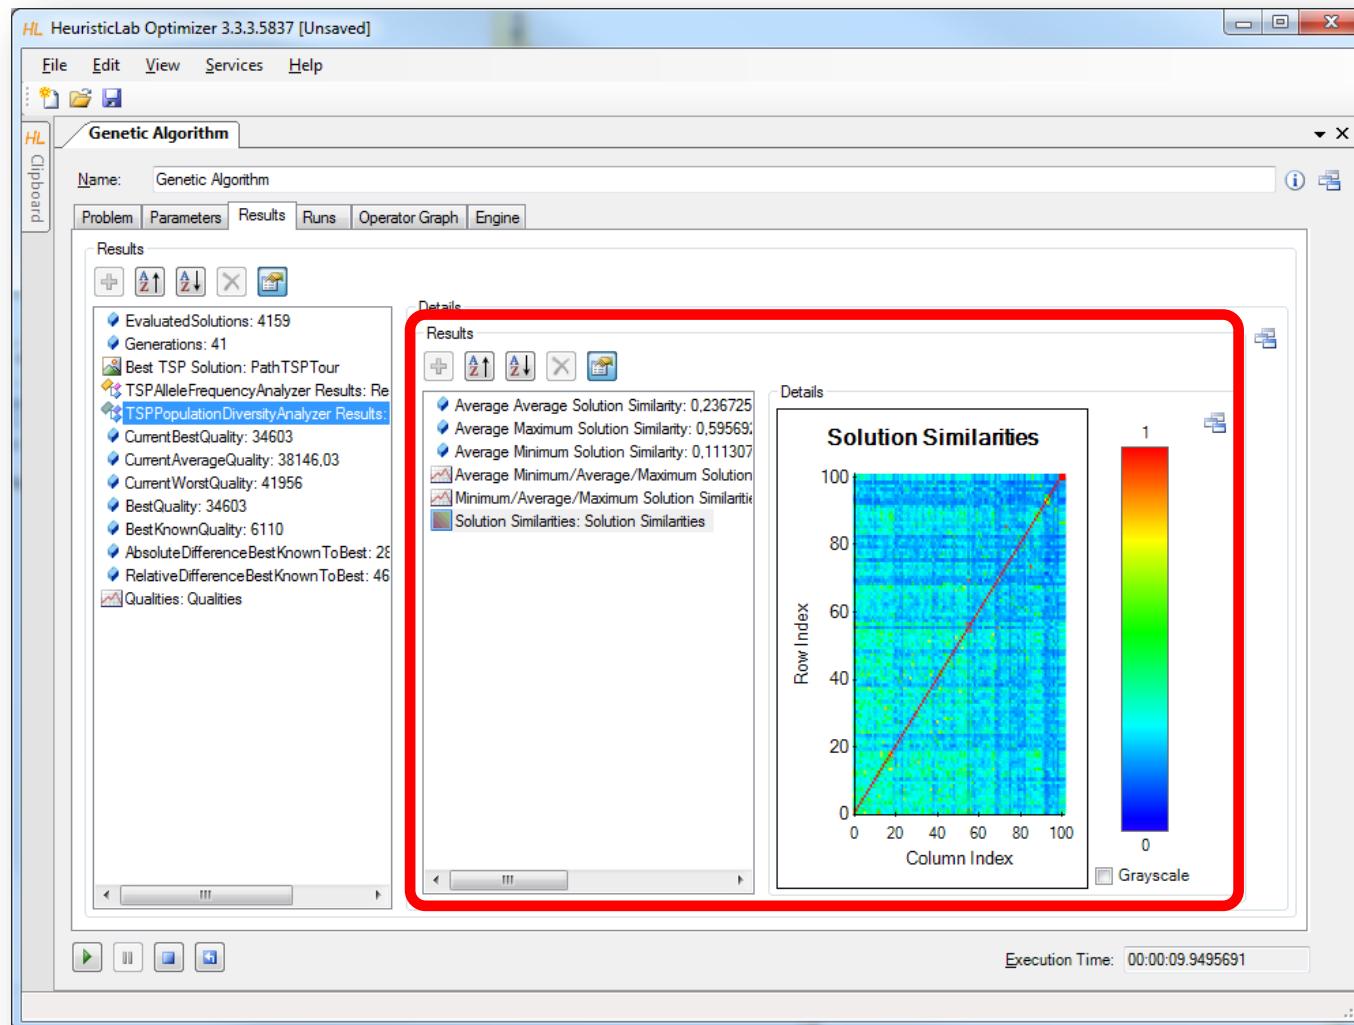

# Analyzers

# TSPAlleleFrequencyAnalyzer

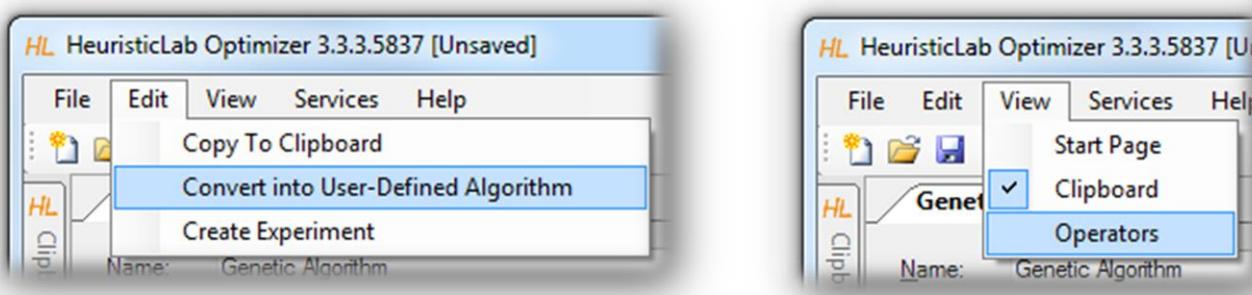

# TSPPopulationDiversityAnalyzer

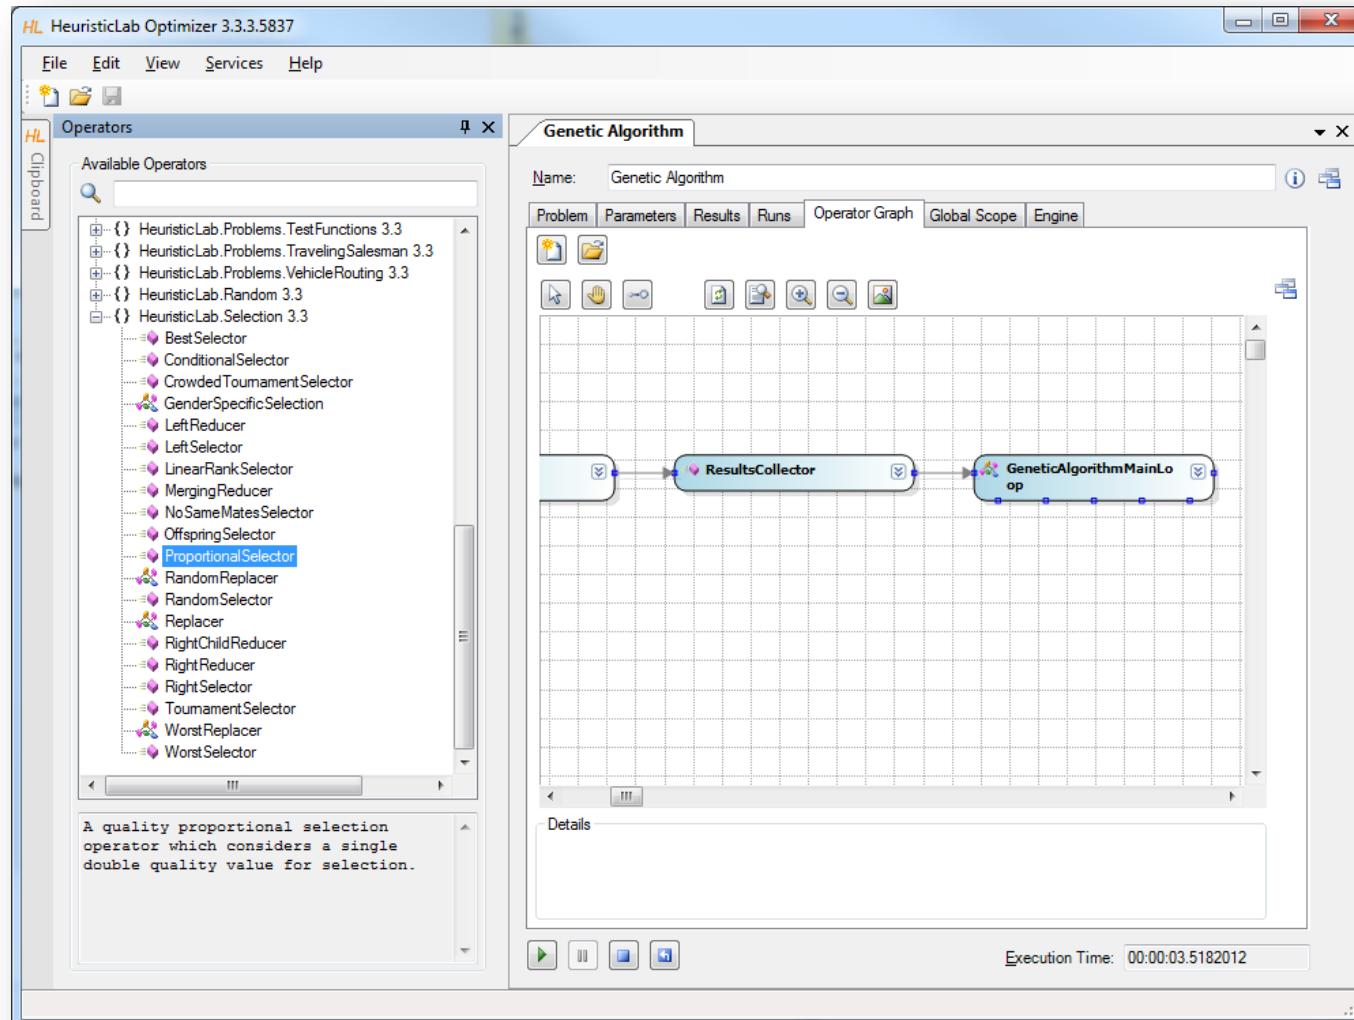

# Building User-Defined Algorithms

- Operator graphs
  - algorithms are represented as operator graphs
  - operator graphs of user-defined algorithms can be changed
  - algorithms can be defined in the graphical algorithm designer
  - use the menu to convert a standard algorithm into a user-defined algorithm

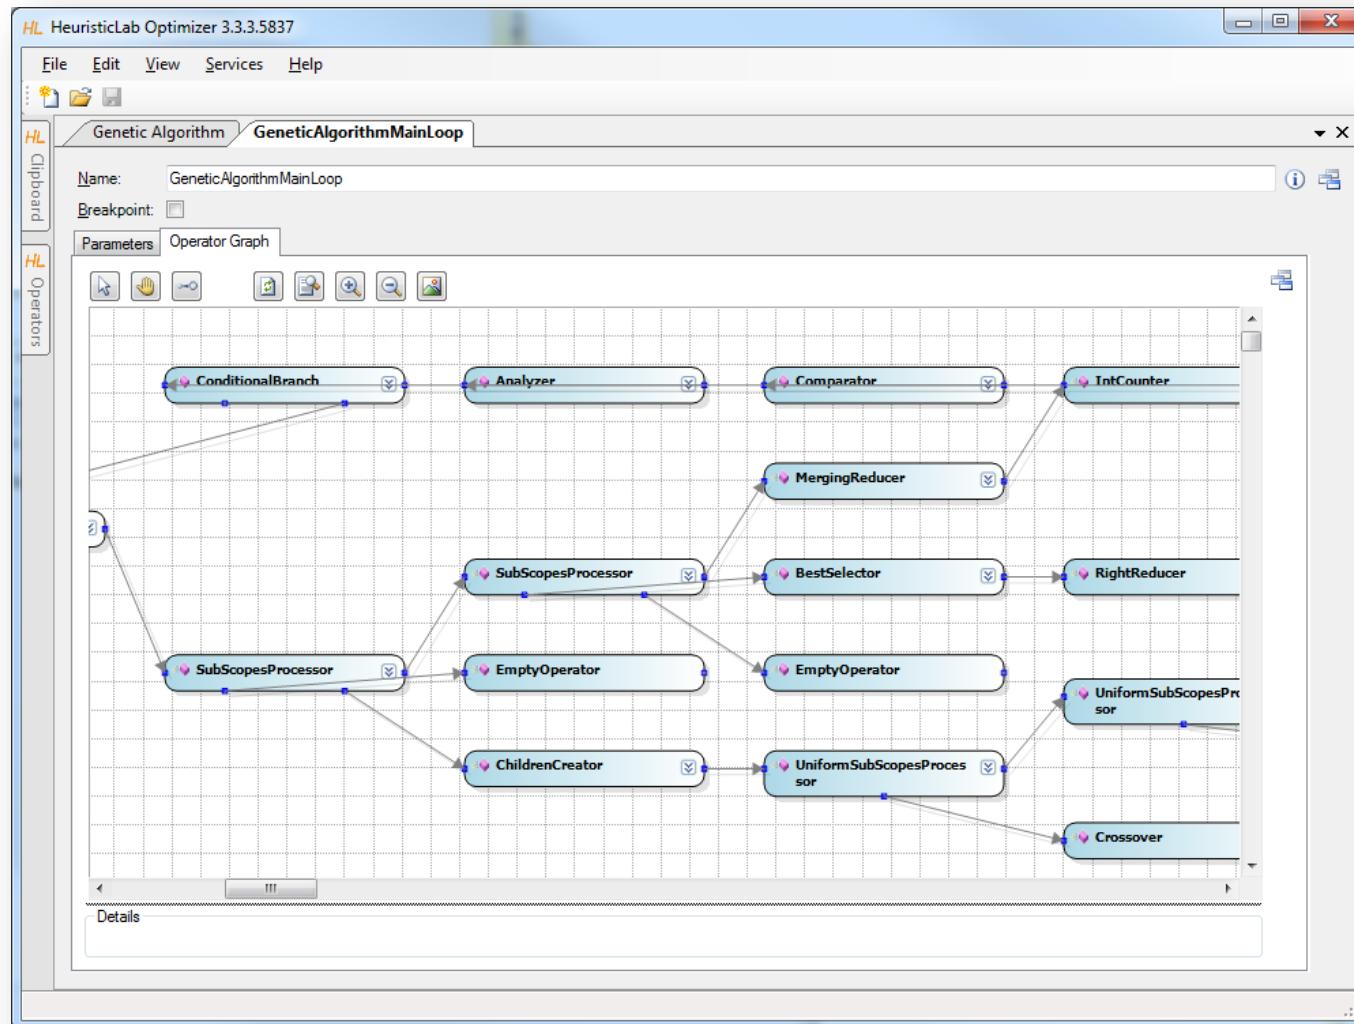

- Operators sidebar
  - drag & drop operators into an operator graph
- Programmable operators
  - add programmable operators in order to implement custom logic in an algorithm
  - no additional development environment needed
- Debug algorithms
  - use the debug engine to obtain detailed information during algorithm execution

# Building User-Defined Algorithms

# Building User-Defined Algorithms

# Programmable Operators

The screenshot shows the HeuristicLab Optimizer 3.3.3.5837 [Unsaved] application window. The title bar indicates the application name and version. The main window displays a code editor for a class named 'ProgrammableSingleSuccessorOperator'. The code implements a static method 'Execute' that returns a successor operation based on the current one. The code editor includes syntax highlighting for C# and a scroll bar. To the left of the code editor are two navigation panes: 'Assemblies' and 'Namespaces'. The 'Assemblies' pane lists various HeuristicLab library components, while the 'Namespaces' pane shows the full namespace hierarchy including 'Common', 'Core', 'Data', 'Operators' (which contains 'Programmable'), and 'System'. The bottom status bar of the application window shows the text 'Ready'.

```
public class ProgrammableSingleSuccessorOperator {
    public static IOperation Execute(ProgrammableSingleSuccessorOperator op,
    ...
    ...
    // implement custom operator
    ...
    ...
    return op.Successor == null ? null : context.CreateOperation(op.Successor);
}
```

# Demonstration Part II: Data-based Modeling

- Introduction
- Regression with HeuristicLab
- Model simplification and export
- Variable relevance analysis
- Classification with HeuristicLab

# Introduction to Data-based Modeling

- Dataset: Matrix  $(x_{i,j})_{i=1..N, j=1..K}$ 
  - N observations of K input variables
  - $x_{i,j}$  = i-th observation of j-th variable
  - Additionally: Vector of labels  $(y_1 \dots y_N)^T$
- Goal: learn association of input variable values to labels

# Data Analysis in HeuristicLab

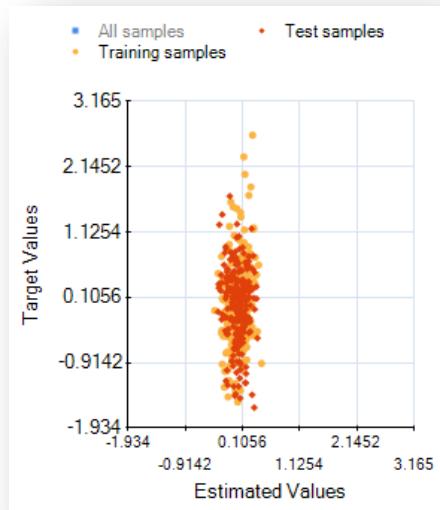

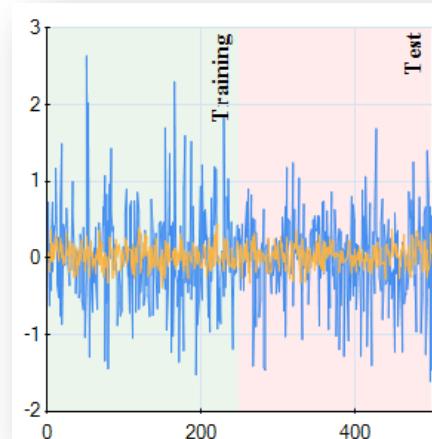

- Symbolic regression and classification using genetic programming
- External Libraries:
  - Linear Regression, Logistic Regression,
  - k-Nearest Neighbours, k-Means,
  - Random Forest, Support Vector Machines, Neural Networks, Gaussian Processes

# Case Study: Regression

- Poly-10 benchmark problem dataset
  - 10 input variables  $x_1 \dots x_{10}$
  - $y = x_1x_2 + x_3x_4 + x_5x_6 + x_1x_7x_9 + x_3x_6x_{10}$
  - non-linear modeling approach necessary
  - frequently used in GP literature
  - available as benchmark problem instance in HeuristicLab

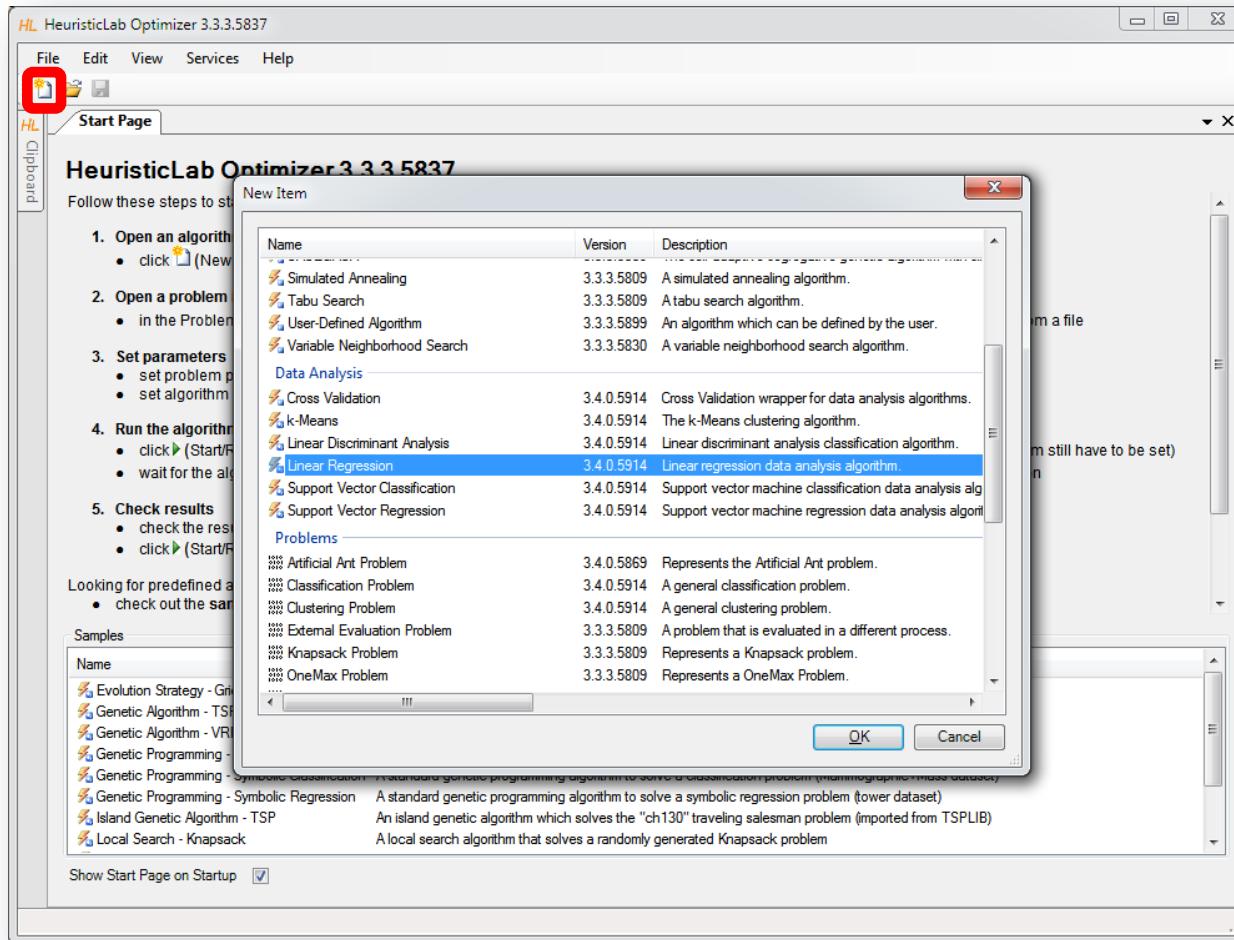

# Demonstration

- problem configuration
  - data import
  - target and input variables
  - data partitions (training and test)
- algorithm configuration
- analysis of results
  - accuracy metrics
  - visualization of model output

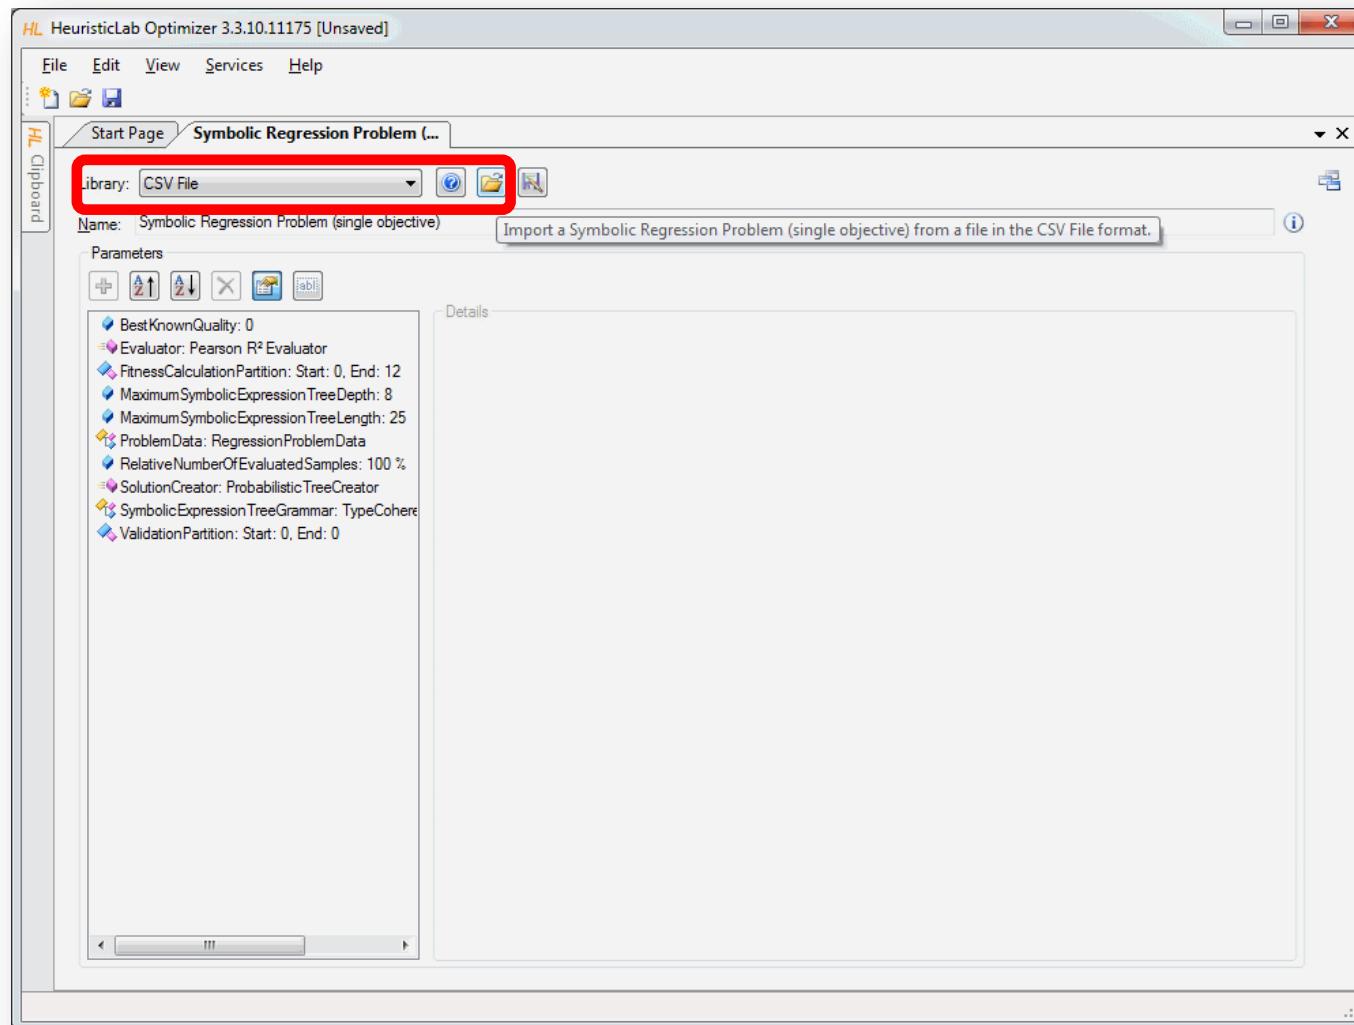

# Linear Regression

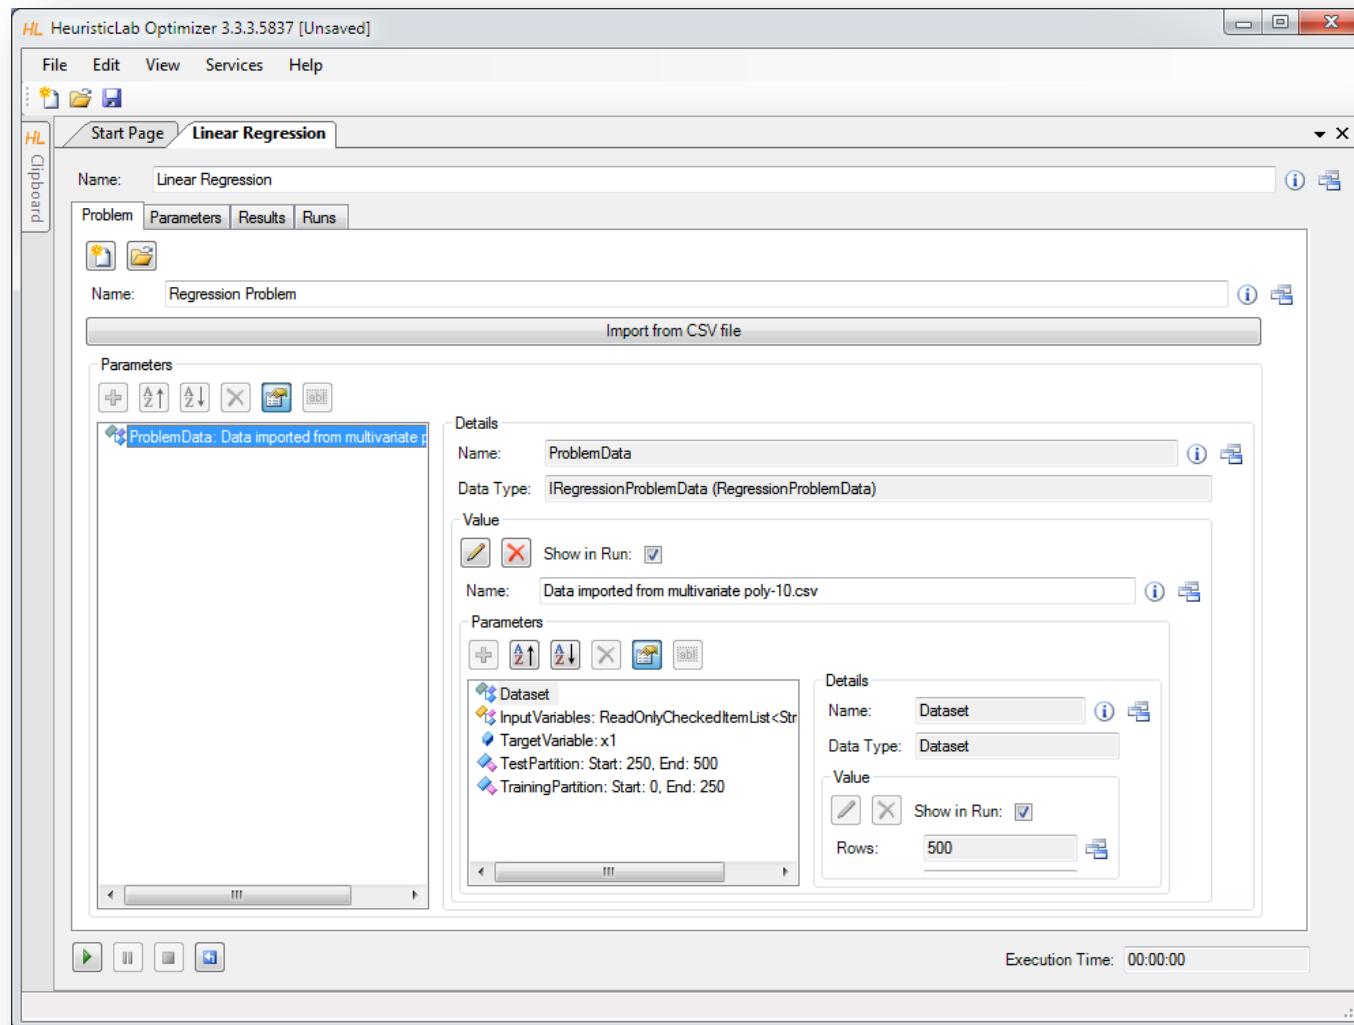

- Create new algorithm

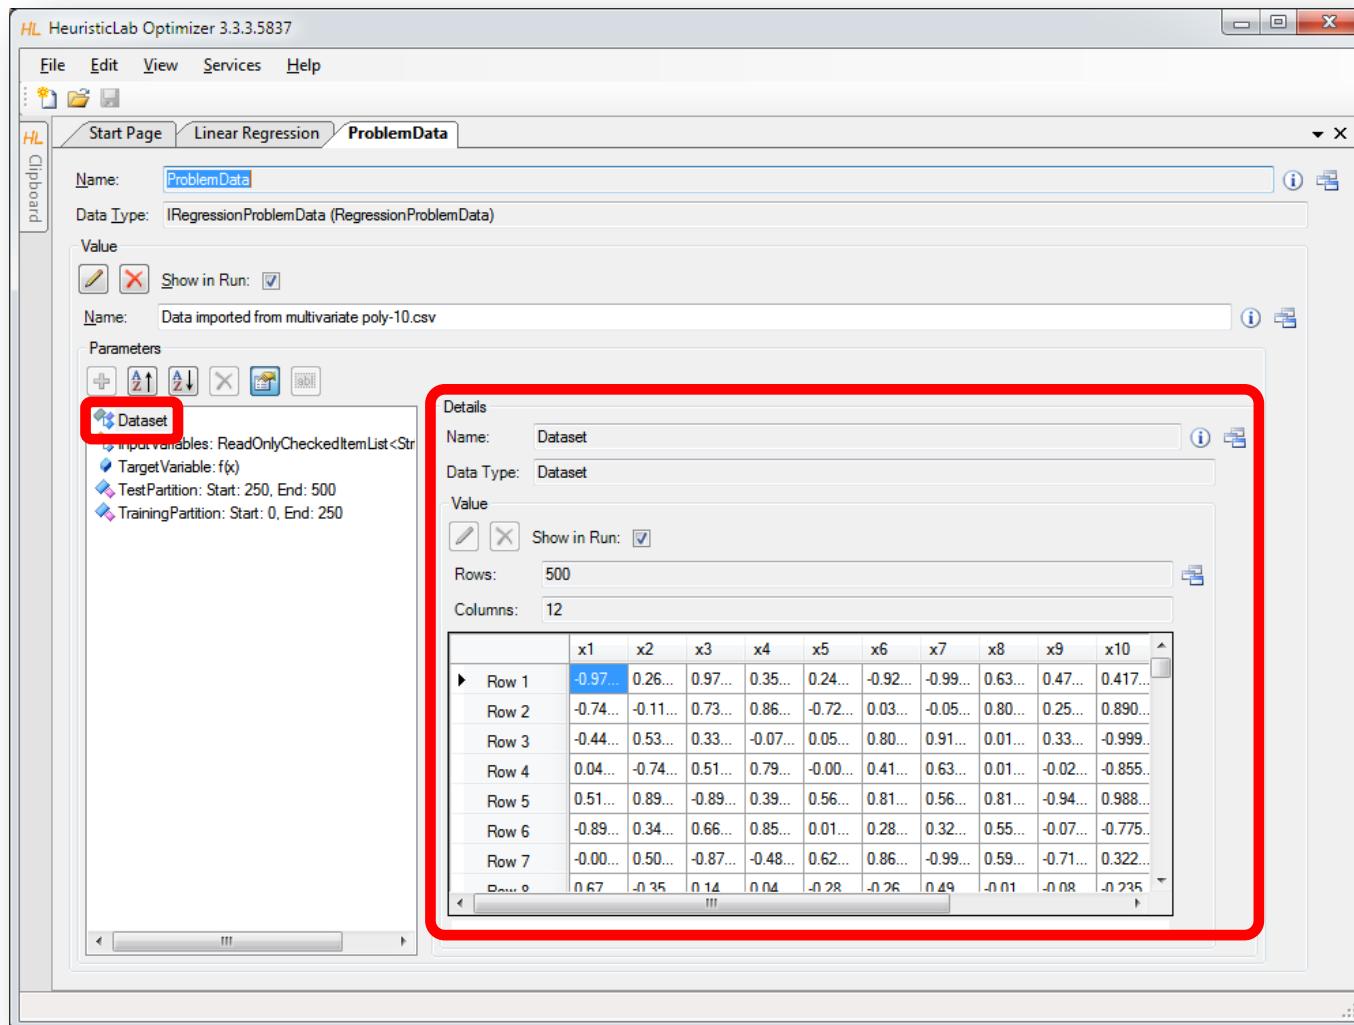

# Import Data from CSV-File

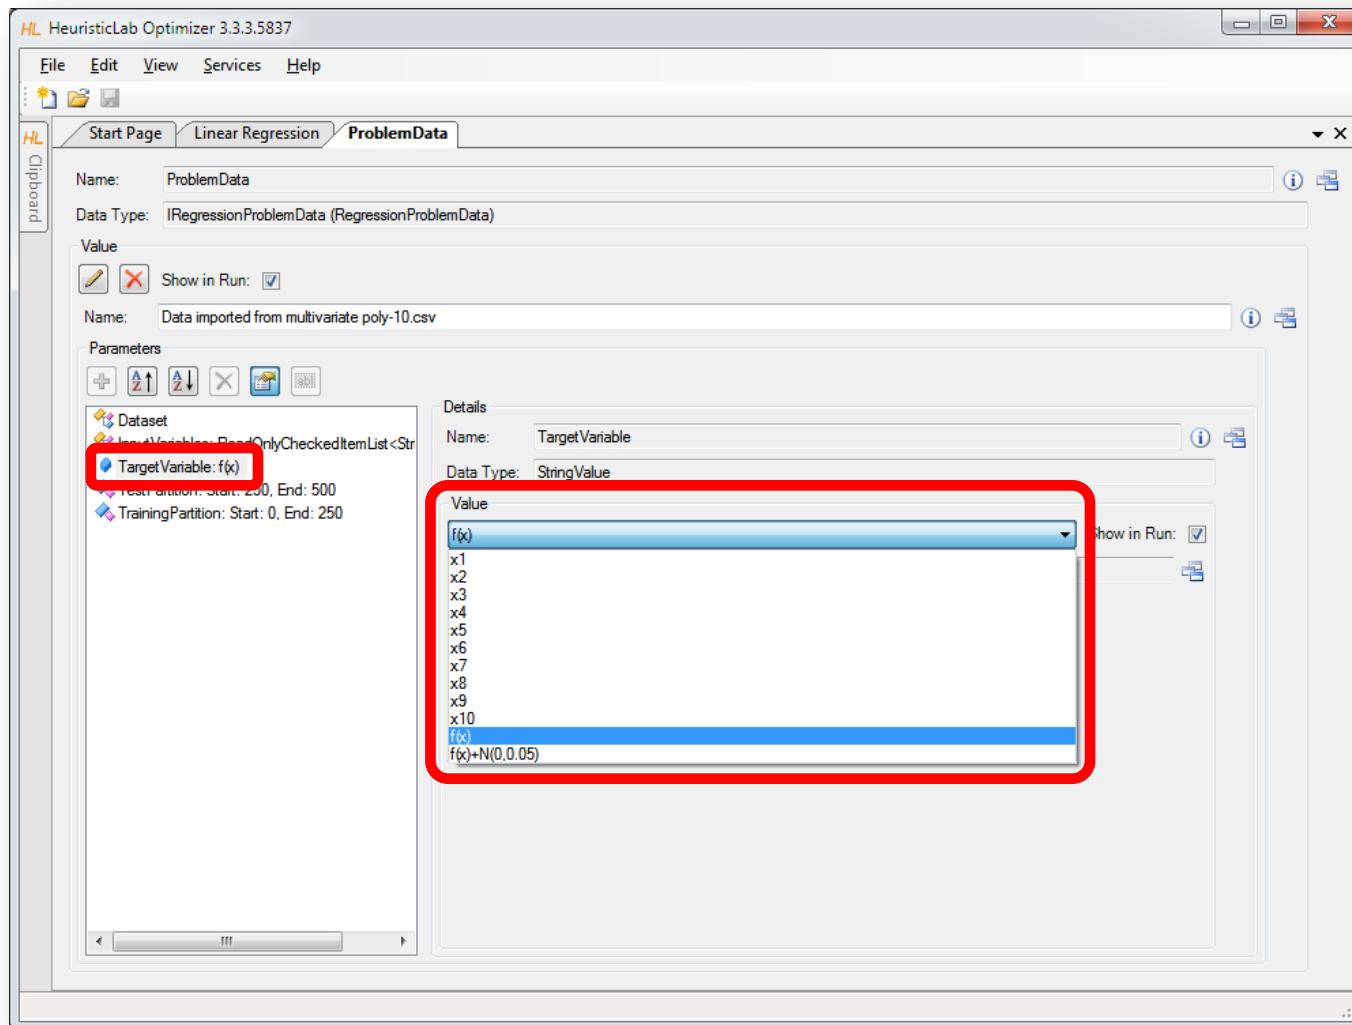

# Inspect and Configure Dataset

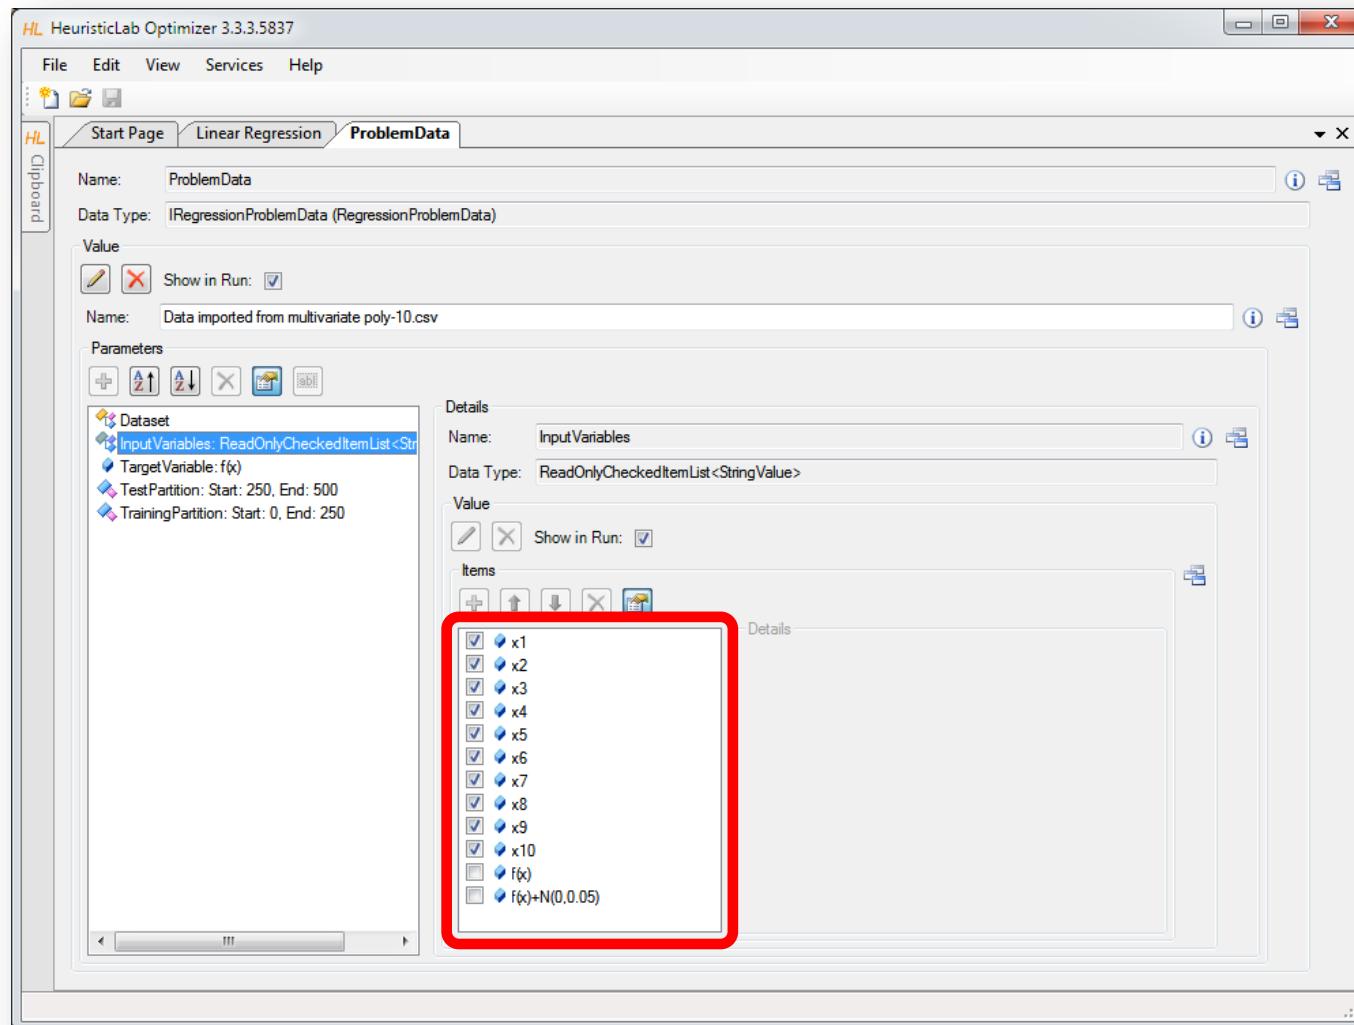

# Inspect Imported Data

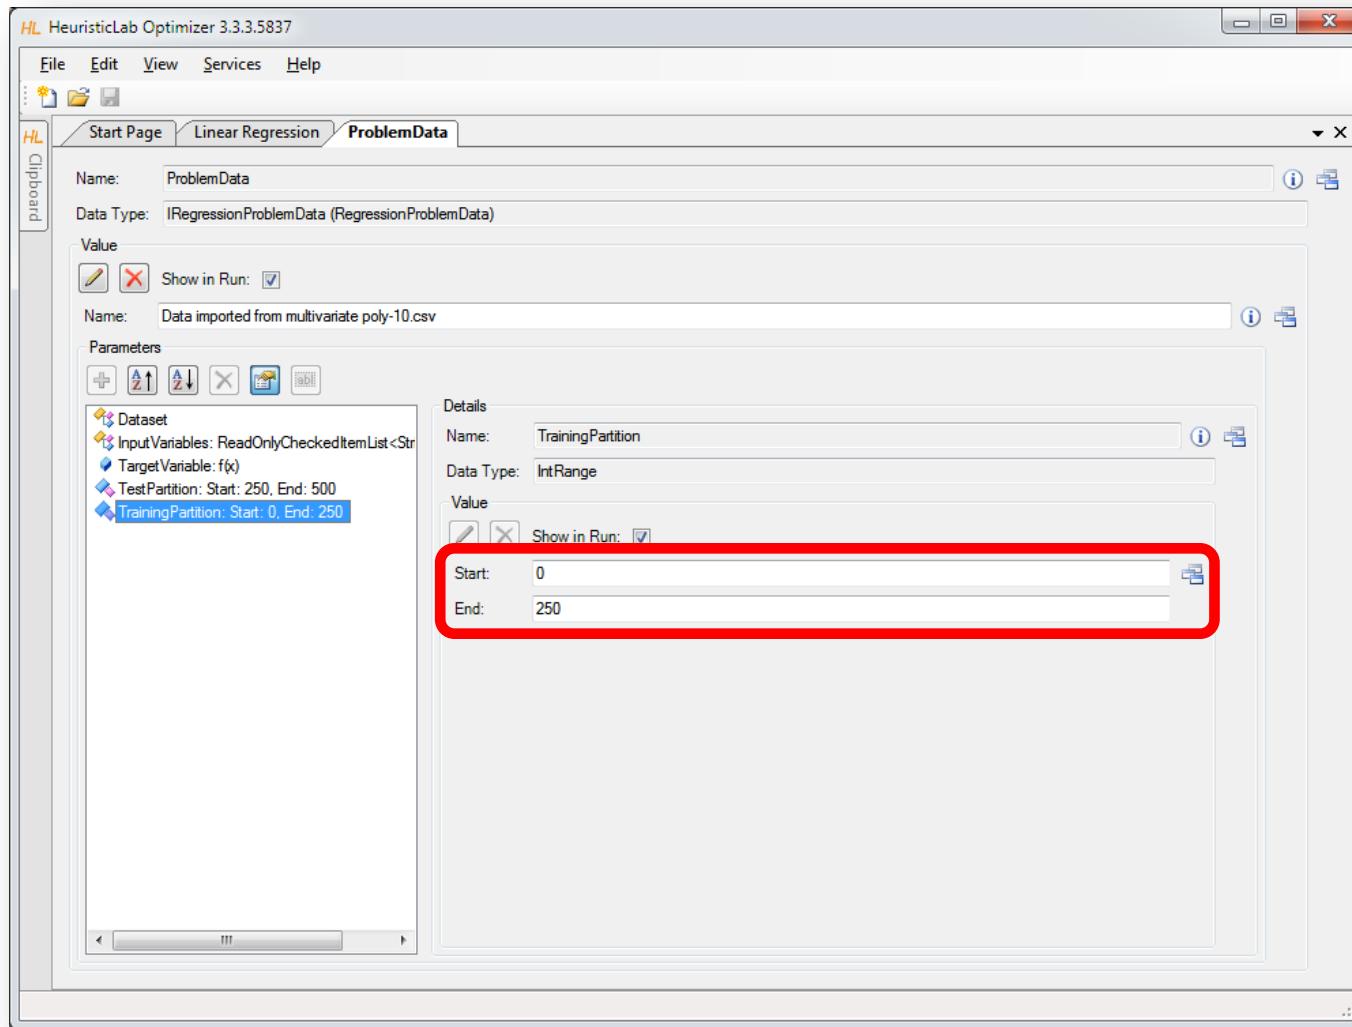

# Set Target Variable

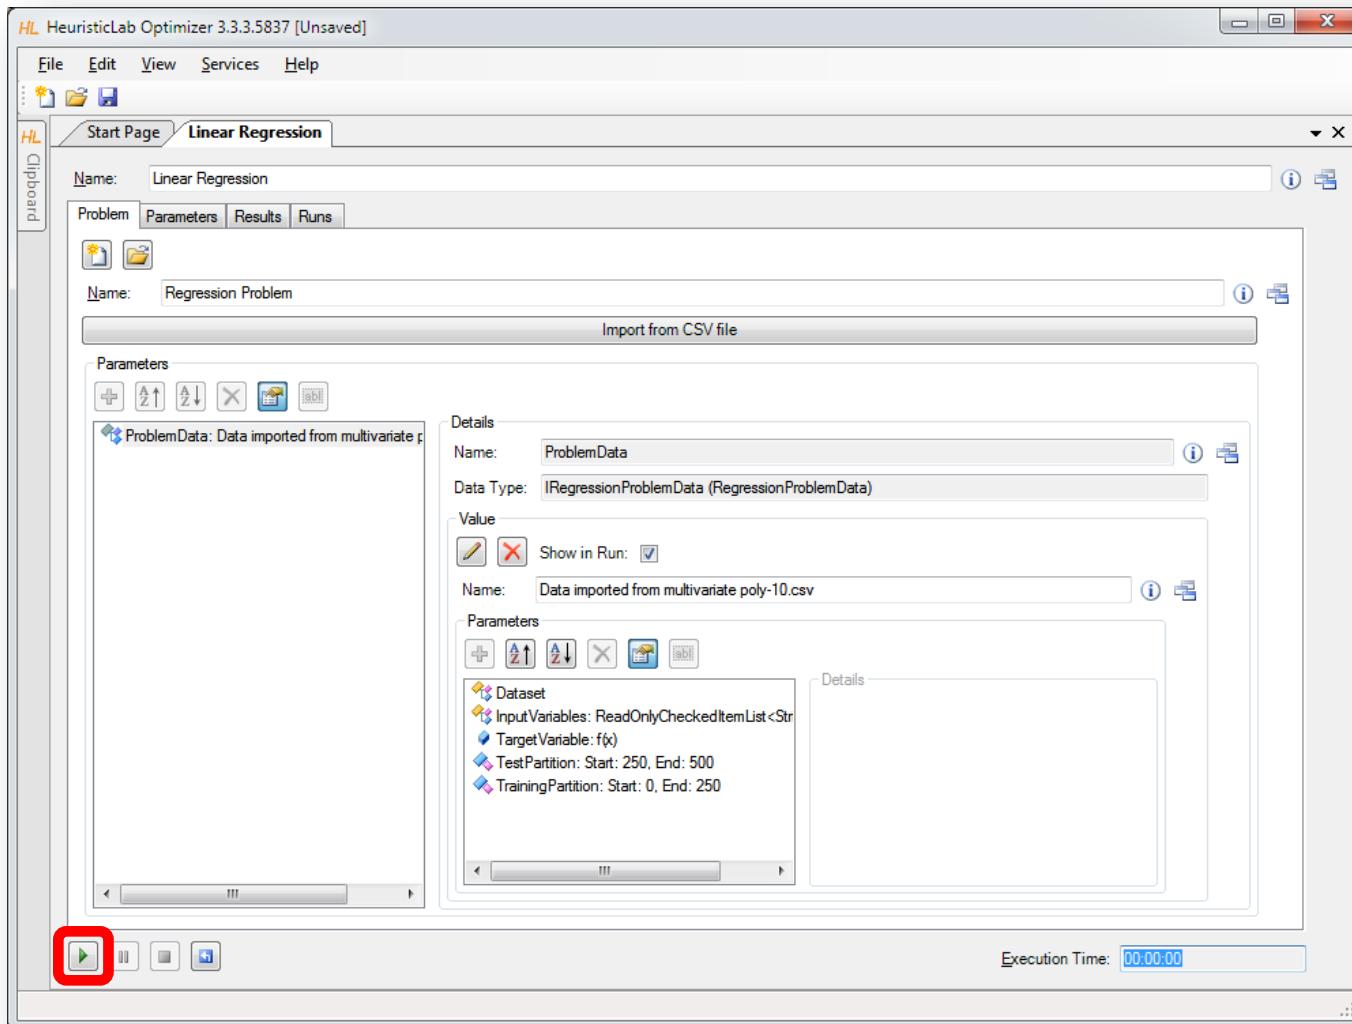

# Select Input Variables

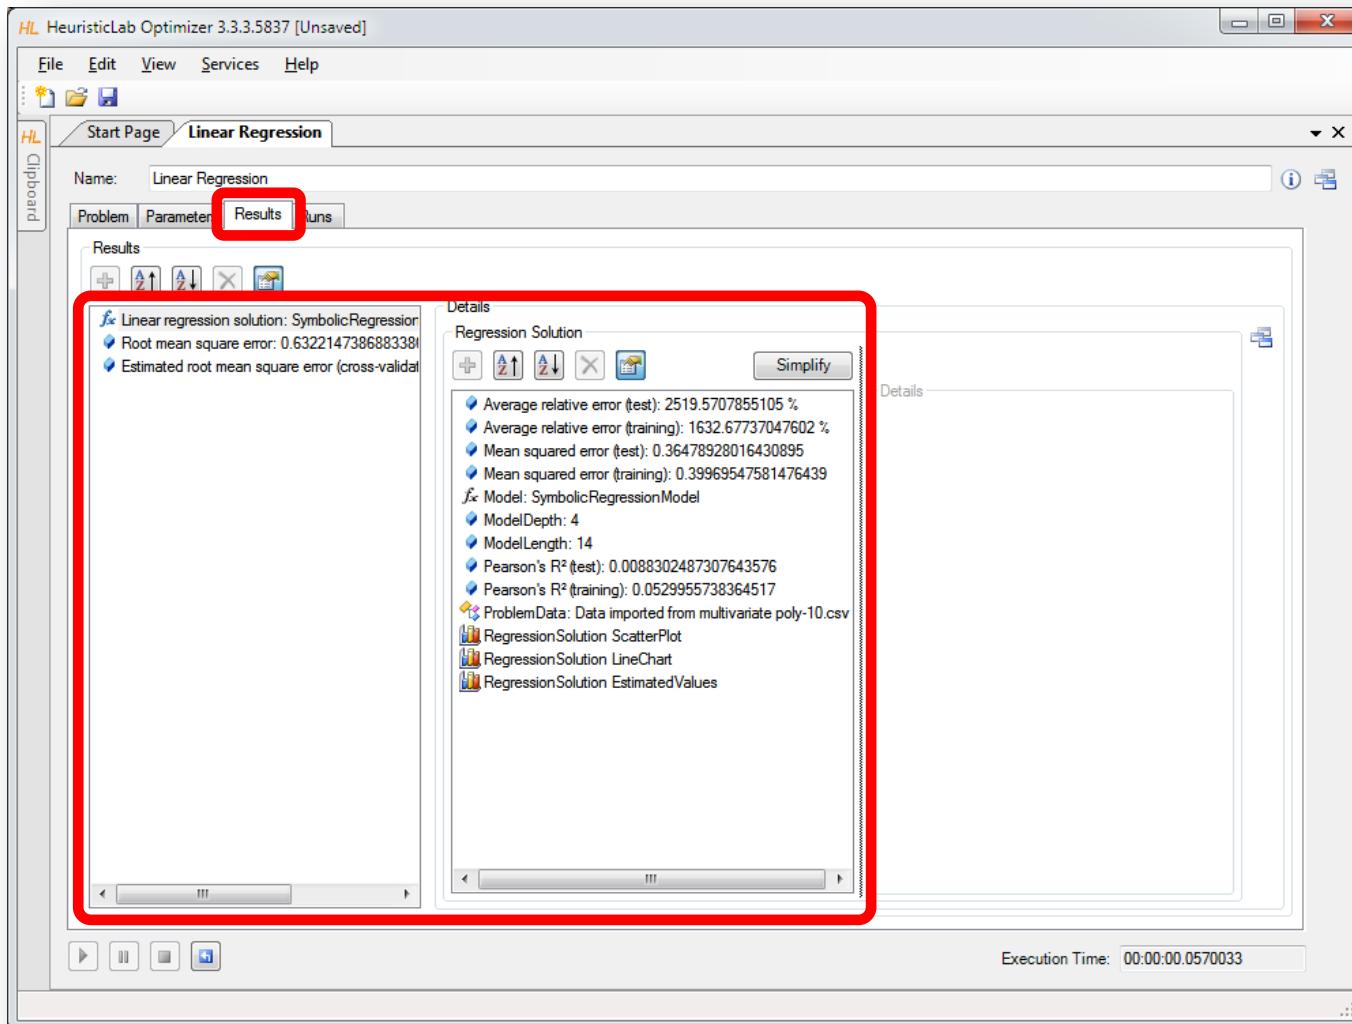

# Configure Training and Test Partitions

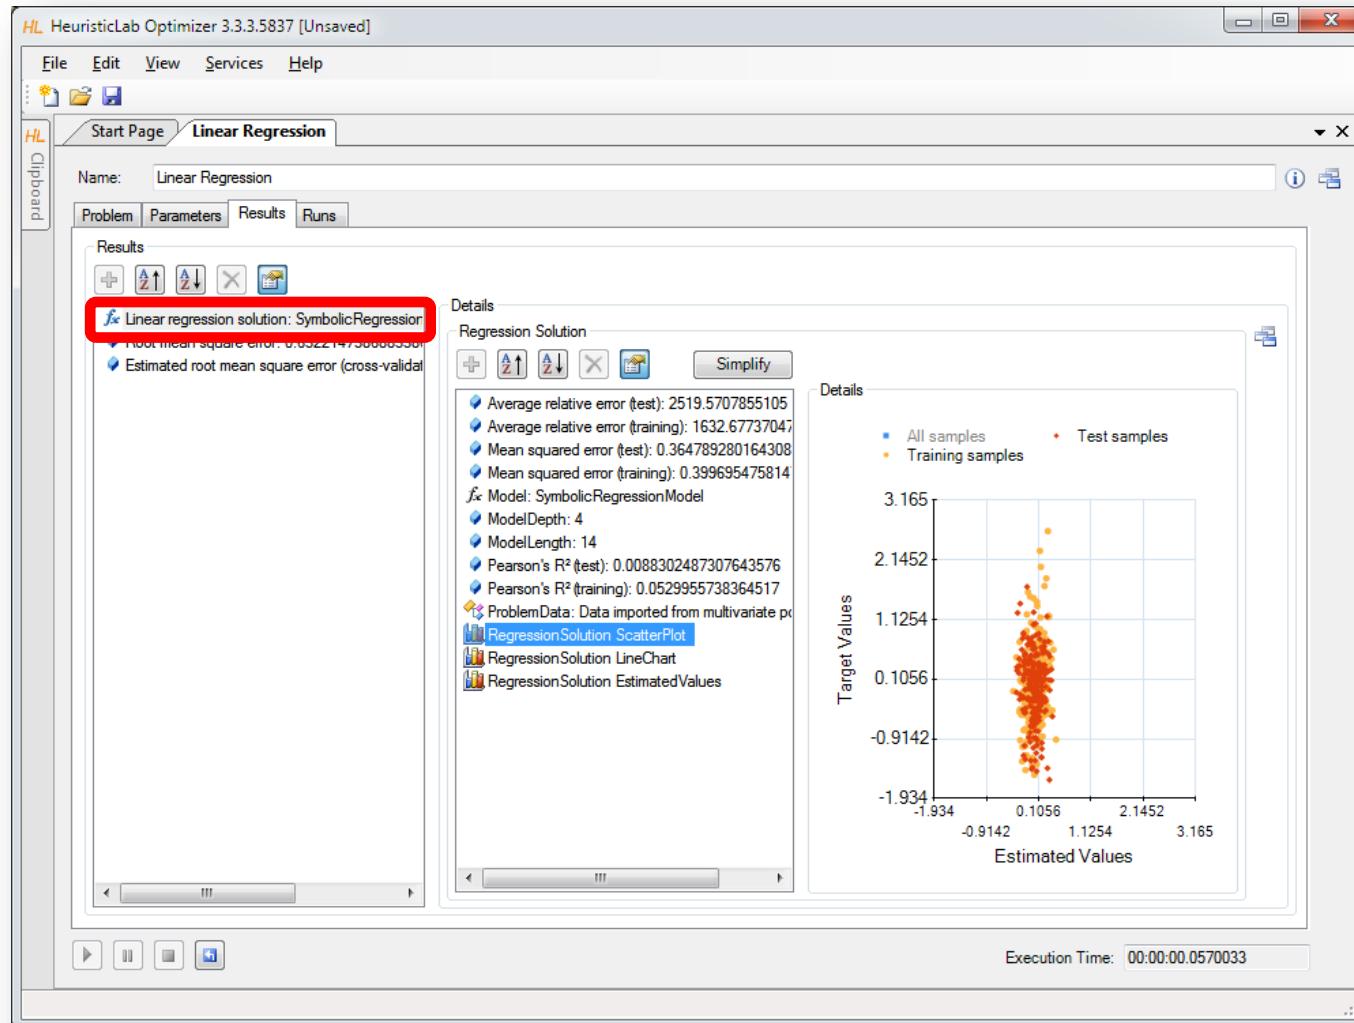

# Run Linear Regression

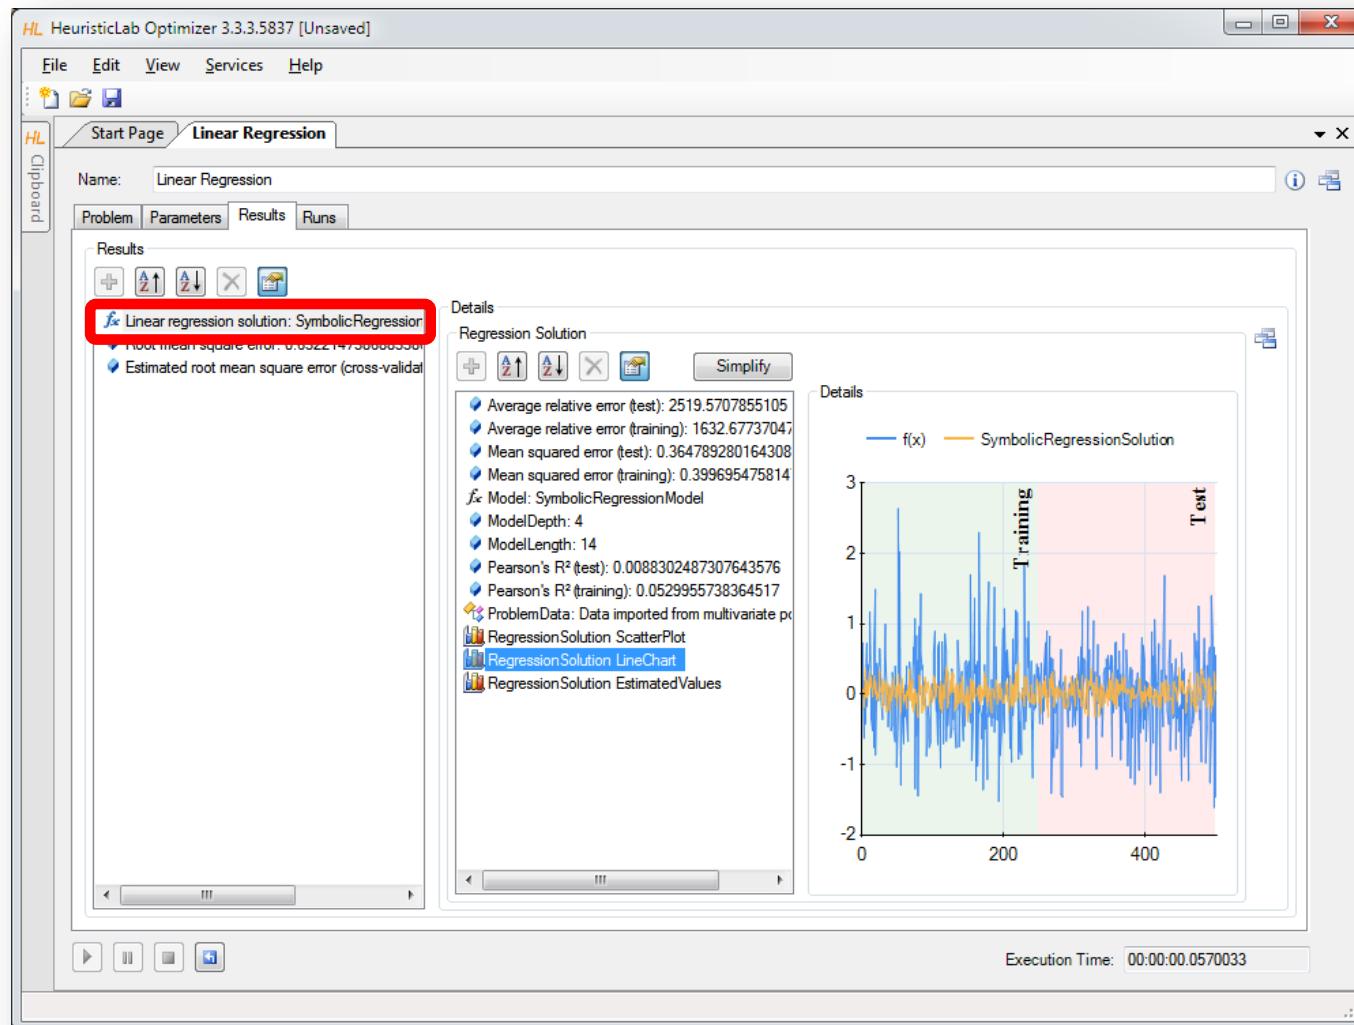

# Inspect Results

# Inspect Scatterplot of Predicted and Target Values

# Inspect Linechart

# Inspect the Model

# Inspect Symbol Frequencies

# Classification with HeuristicLab

- Symbolic classification
  - evolve discriminating function using GP
  - find thresholds to assign classes
- Demonstration
  - real world medical application
  - model accuracy
  - visualization of model output
    - discriminating function output
    - ROC-curve
    - confusion matrix

	Actual Class 0	Actual Class 1
Predicted Class 0	197	29
Predicted Class 1	64	190

# Case Study: Classification

- Real world medical dataset (*Mammographic Mass*) from UCI Machine Learning Repository
  - data from non-invasive mammography screening
  - variables:
    - patient age
    - visual features of inspected mass lesions: shape, margin, density
  - target variable: severity (malignant, benign)
  - available as a benchmark problem instance in HeuristicLab

# Open Sample

File Edit View Services Help

Clipboard Start Page

**HeuristicLab Optimizer 3.3.10.11175**

Follow these steps to start working with HeuristicLab Optimizer:

1. Open an algorithm
  - click  (New Item) in the toolbar and select an algorithm or click  (Open File) in the toolbar and load an algorithm from a file
2. Open a problem in the algorithm
  - in the Problem tab of the algorithm click  (New Problem) and select a problem or click  (Open Problem) and load a problem from a file
3. Set parameters
  - set problem parameters in the Problem tab of the algorithm
  - set algorithm parameters in the Parameters tab of the algorithm
4. Run the algorithm
  - click  (Start/Resume Algorithm) to execute the algorithm (if the button is grayed out some parameters of the algorithm or the problem still have to be set)
  - wait for the algorithm to terminate or click  (Pause Algorithm) to interrupt its execution or click  (Stop Algorithm) to stop its execution
5. Check results
  - check the results on the Results tab of the algorithm
  - click  (Start/Resume Algorithm) to continue the algorithm or click  (Reset Algorithm) to prepare a new run

Looking for predefined algorithms which can be executed immediately?

- check out the **sample algorithms** below

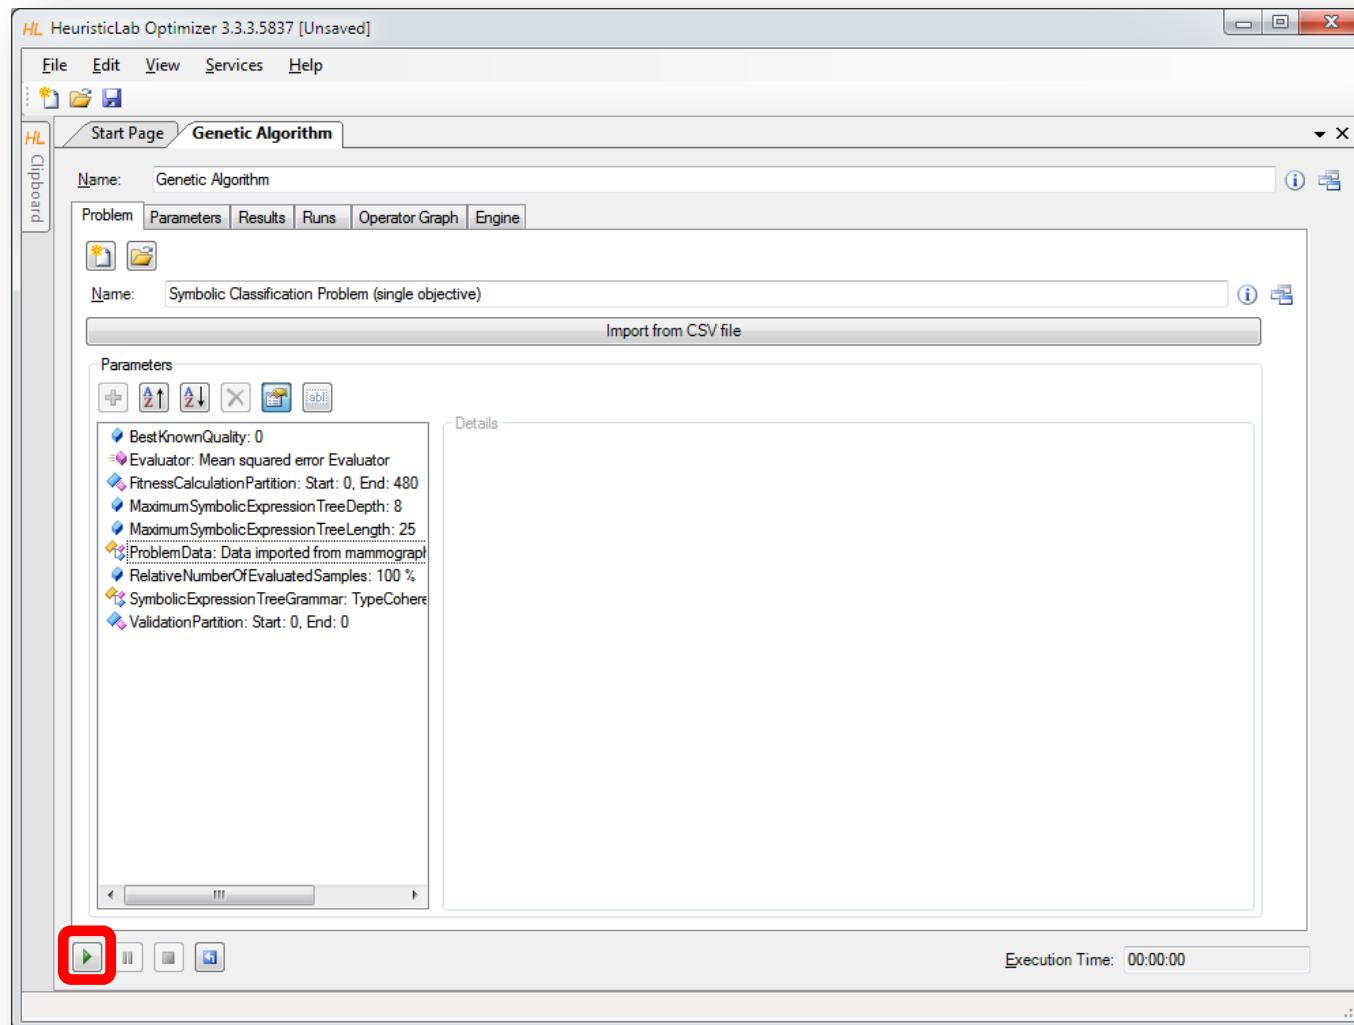

Any feedback, questions, problems or requests for new features?

- visit the HeuristicLab trac at <http://dev.heuristiclab.com>
- watch the HeuristicLab video tutorials at <http://www.youtube.com/heuristiclab>
- join the HeuristicLab mailing list <<mailto:heuristiclab@googlegroups.com>>
- visit the HeuristicLab facebook site at <http://www.facebook.com/heuristiclab>
- write an e-mail to <<mailto:support@heuristiclab.com>> to contact the HeuristicLab

Name	Description
<b>Standard Problems</b>	
 Evolution Strategy - Griewank	An evolution strat
 Genetic Algorithm - TSP	A genetic algorith
 Genetic Algorithm - VRP	A genetic algorith
 Genetic Programming - Artificial Ant	A standard geneti
 Genetic Programming - Multiplexer 11 problem	A genetic program
 Grammatical Evolution - Artificial Ant (SantaFe)	Grammatical evoluti
 Island Genetic Algorithm - TSP	An island genetic
 Local Search - Knapsack	A local search alg
 Particle Swarm Optimization - Schwefel	A particle swarm o
 RAPGA - Job Shop Scheduling	A relevant alleles
 Scatter Search - VRP	A scatter search a
 Simulated Annealing - Rastrigin	A simulated anneal
 Tabu Search - TSP	A tabu search alg
 Tabu Search - VRP	A tabu search alg
 Variable Neighborhood Search - TSP	A variable neighb
<b>Data Analysis</b>	
 Gaussian Process Regression	A Gaussian proces
 Genetic Programming - Symbolic Classification	A standard geneti
 Genetic Programming - Symbolic Regression	A standard geneti
 Genetic Programming - Time Series Prediction (Mackey-Glass-17)	A genetic program
 Grammatical Evolution - Symbolic Regression (Poly-10)	Grammatical evoluti
<b>Scripts</b>	
 Genetic Algorithm Script - QAP	A scripted genetic
 GUI Automation Script	A script that runs
 Offspring Selection Genetic Algorithm Script - Rastrigin	A scripted offsprin

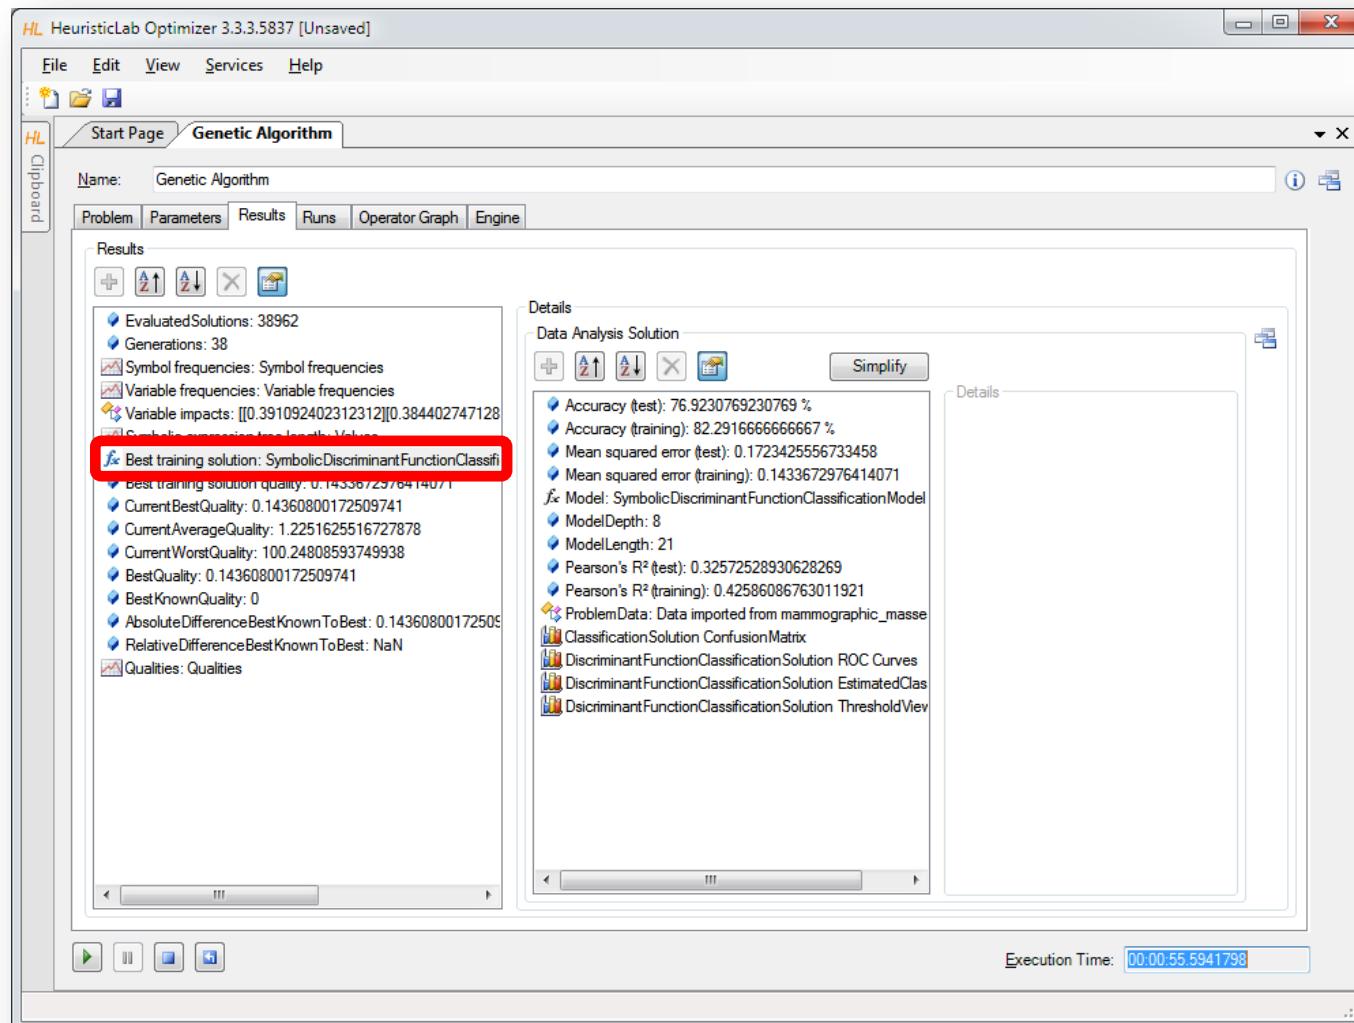

# Configure and Run Algorithm

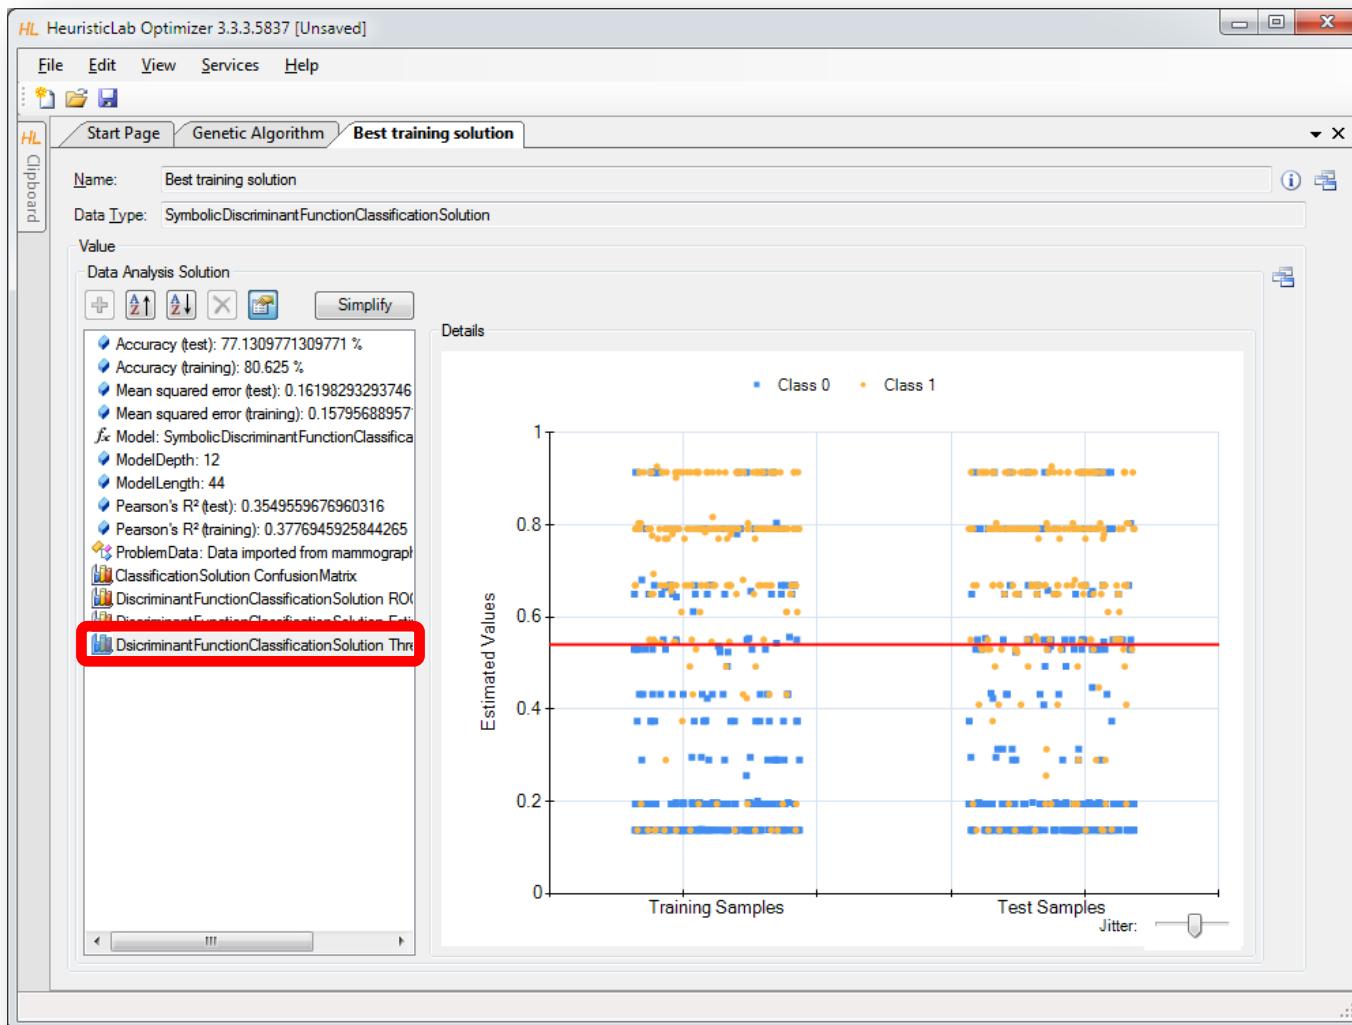

# Inspect Quality Linechart

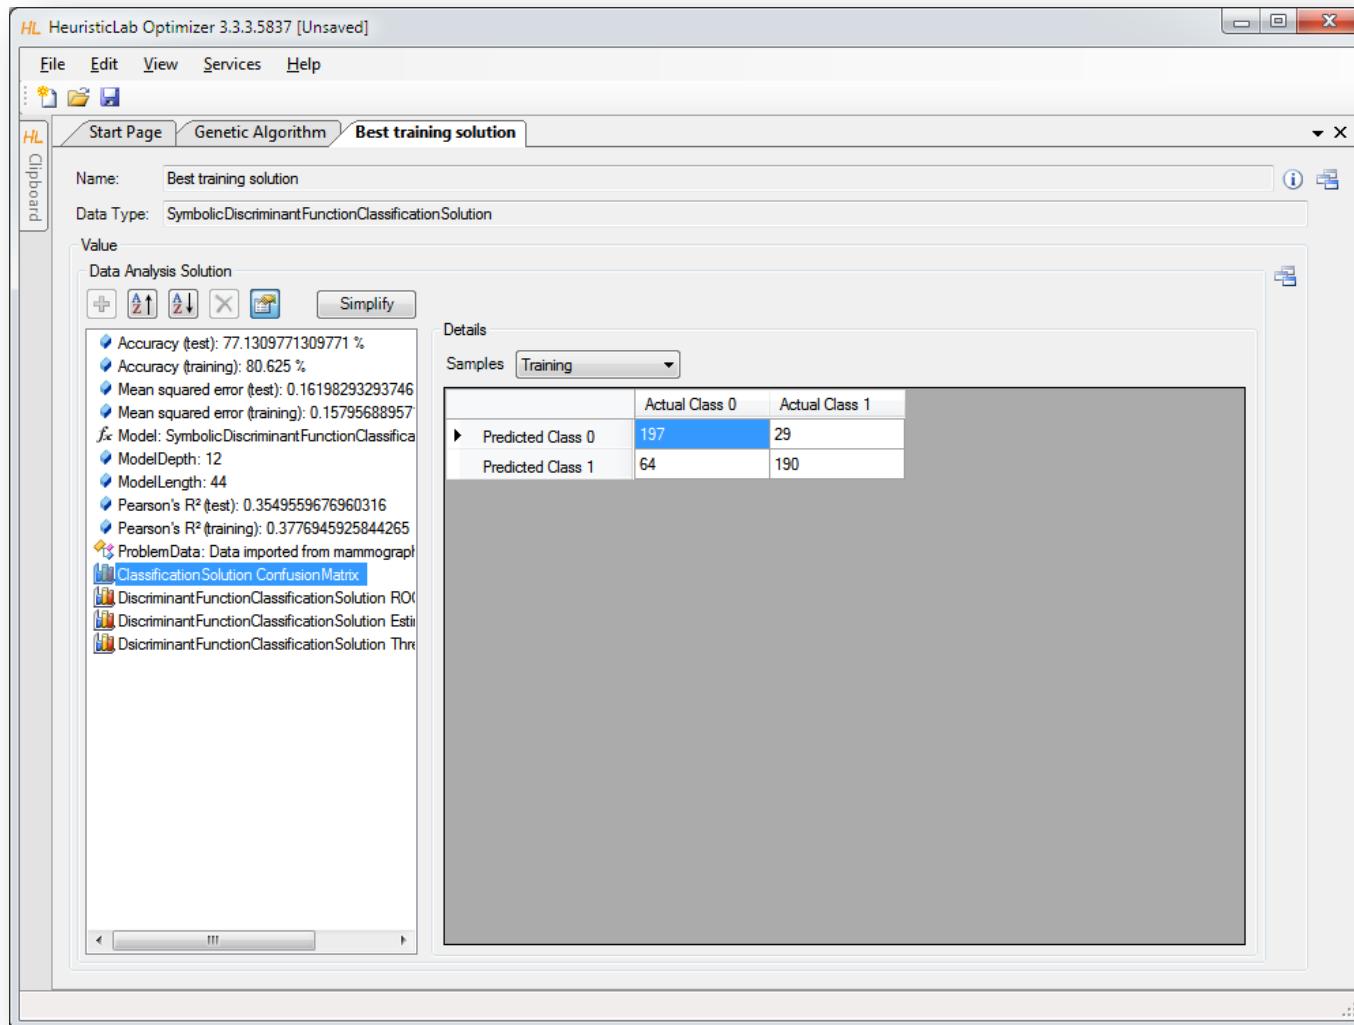

# Inspect Best Training Solution

# Inspect Model Output and Thresholds

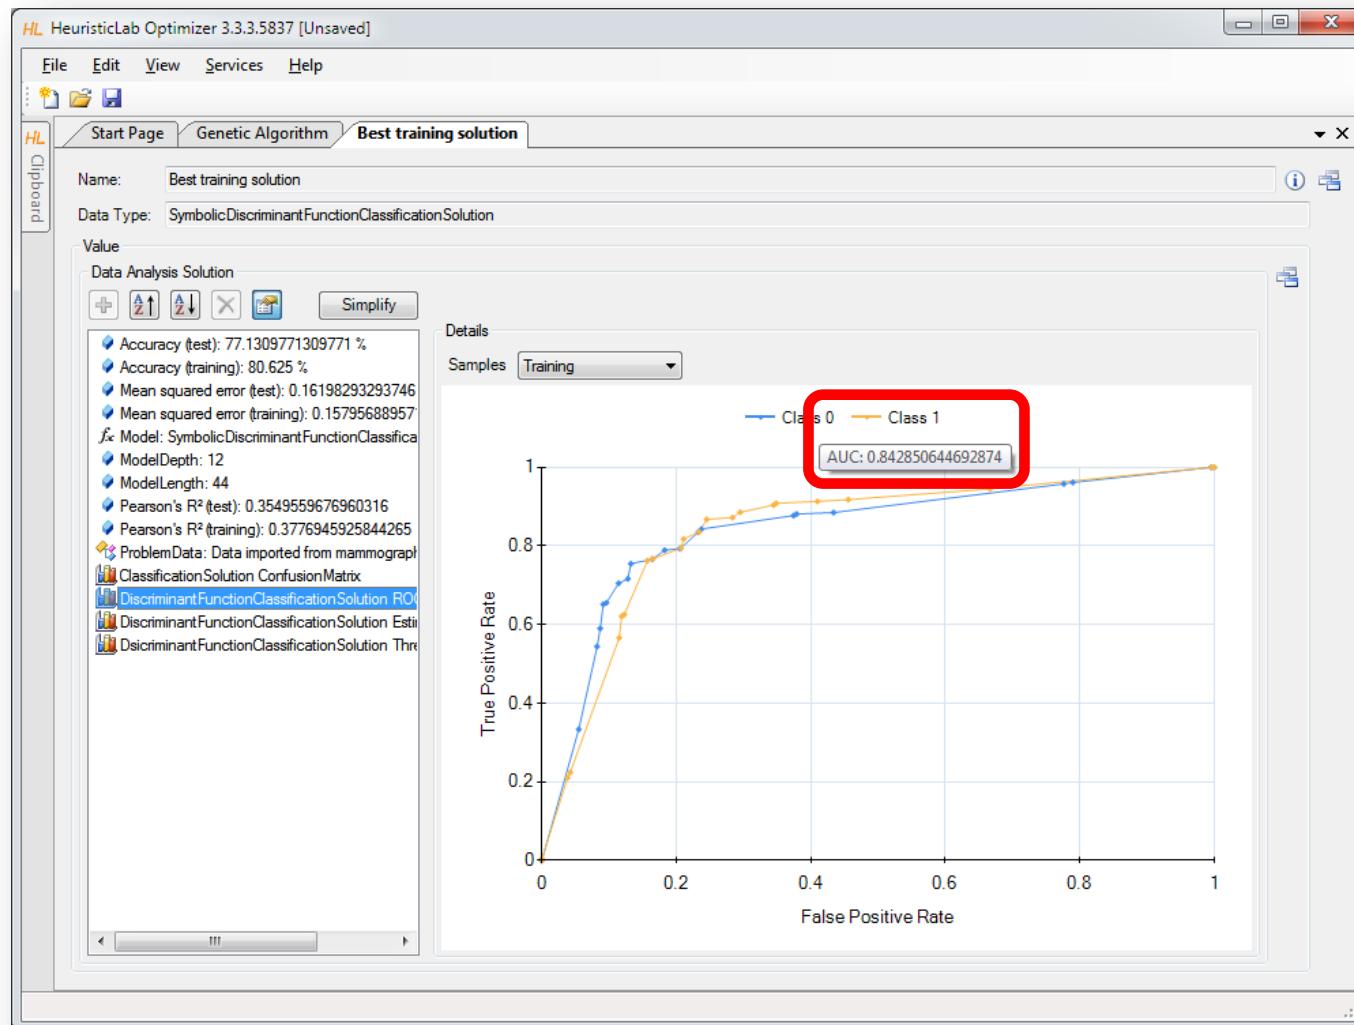

# Inspect Confusion Matrix

The screenshot shows the HeuristicLab Optimizer interface with the title bar "HL HeuristicLab Optimizer 3.3.3.5837 [Unsaved]". The menu bar includes File, Edit, View, Services, and Help. The tabs at the top are Start Page, Genetic Algorithm, and Best training solution, with Best training solution selected. The main area displays a "Data Analysis Solution" for a "SymbolicDiscriminantFunctionClassificationSolution". The "Value" section lists various performance metrics and model details. The "Details" section shows a confusion matrix for "Training" samples:

	Actual Class 0	Actual Class 1
Predicted Class 0	197	29
Predicted Class 1	64	190

# Inspect ROC Curve

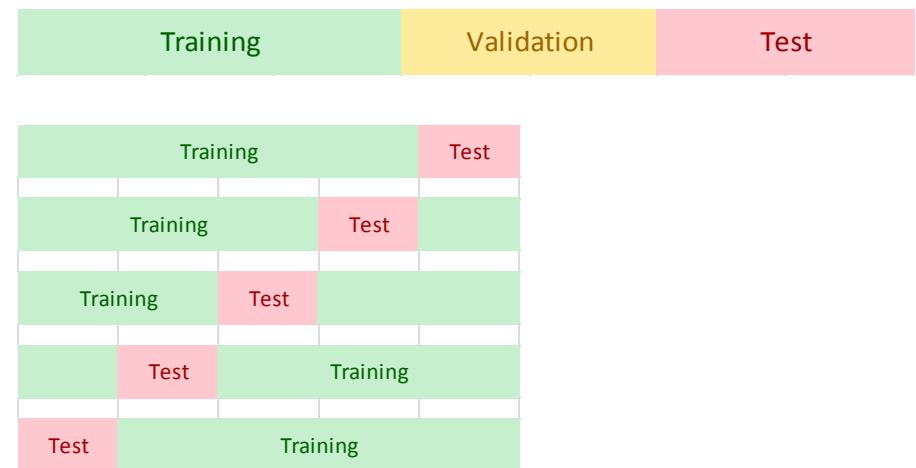

# Validation of Results

- Overfitting = memorizing data

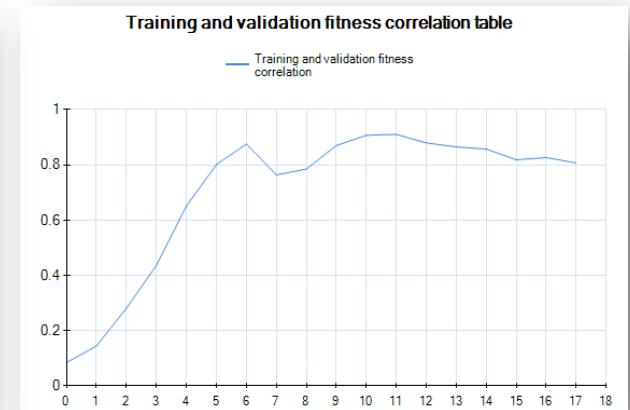

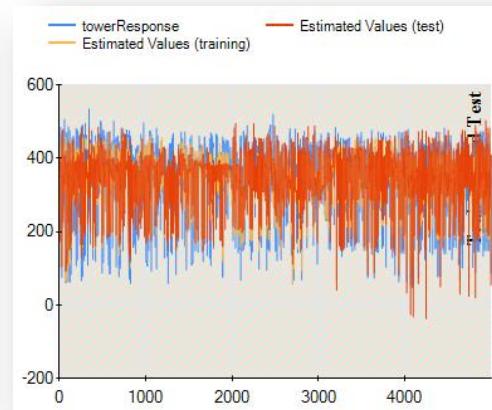

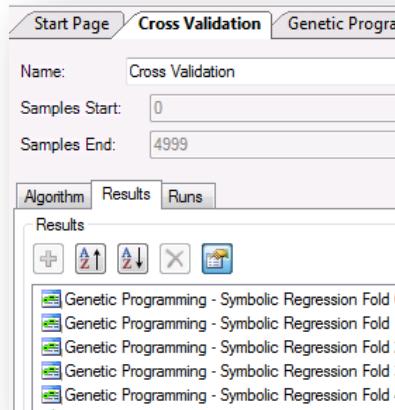

- Strategies to reduce overfitting
  - validation partition
  - cross-validation

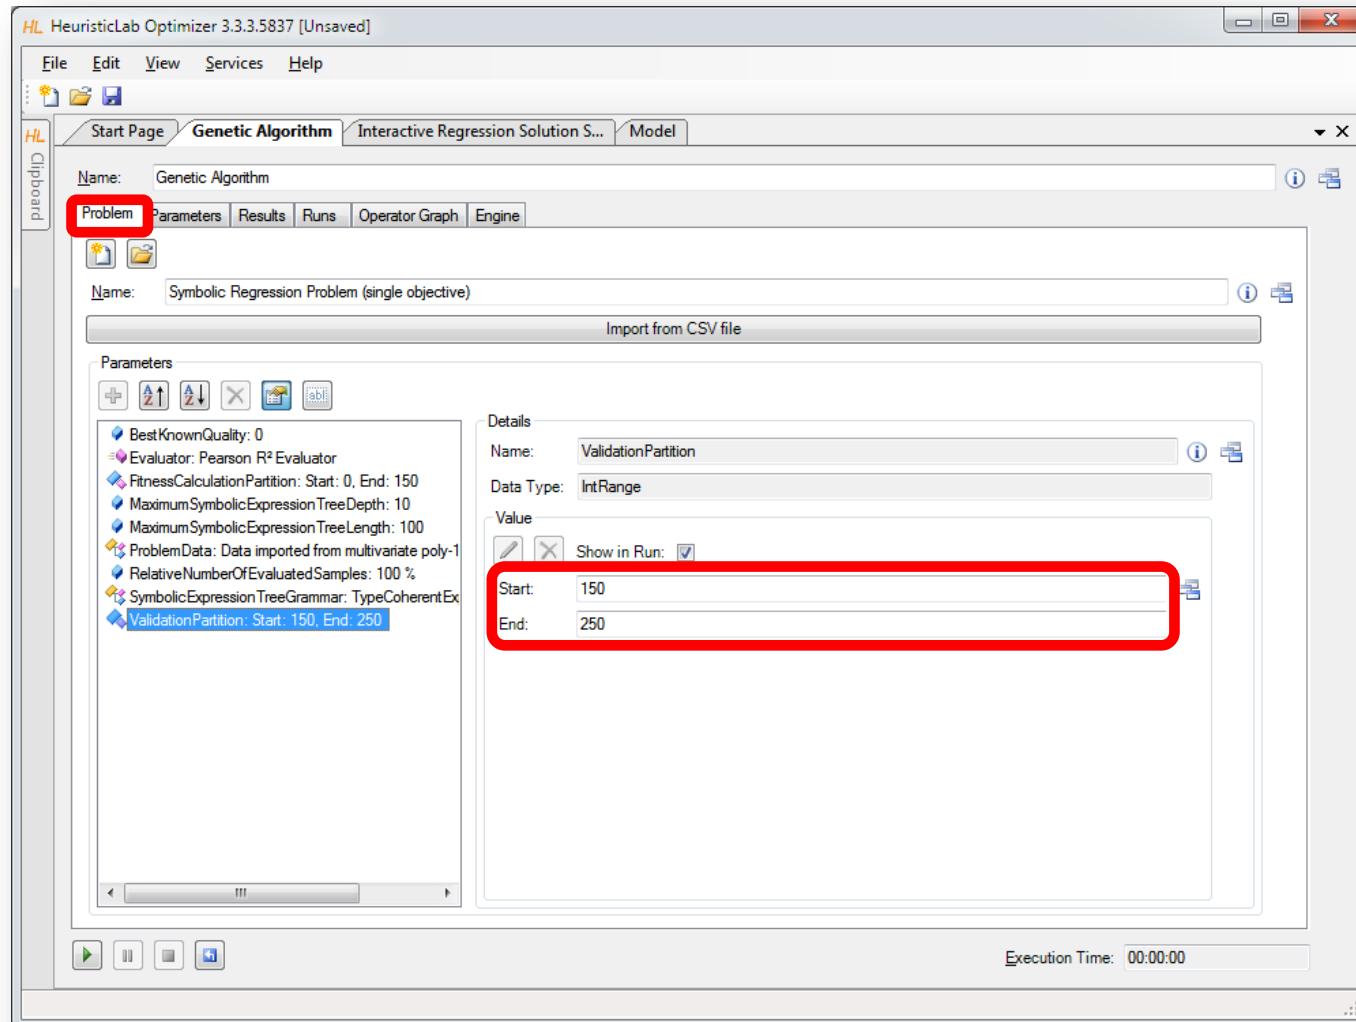

# Validation of Results

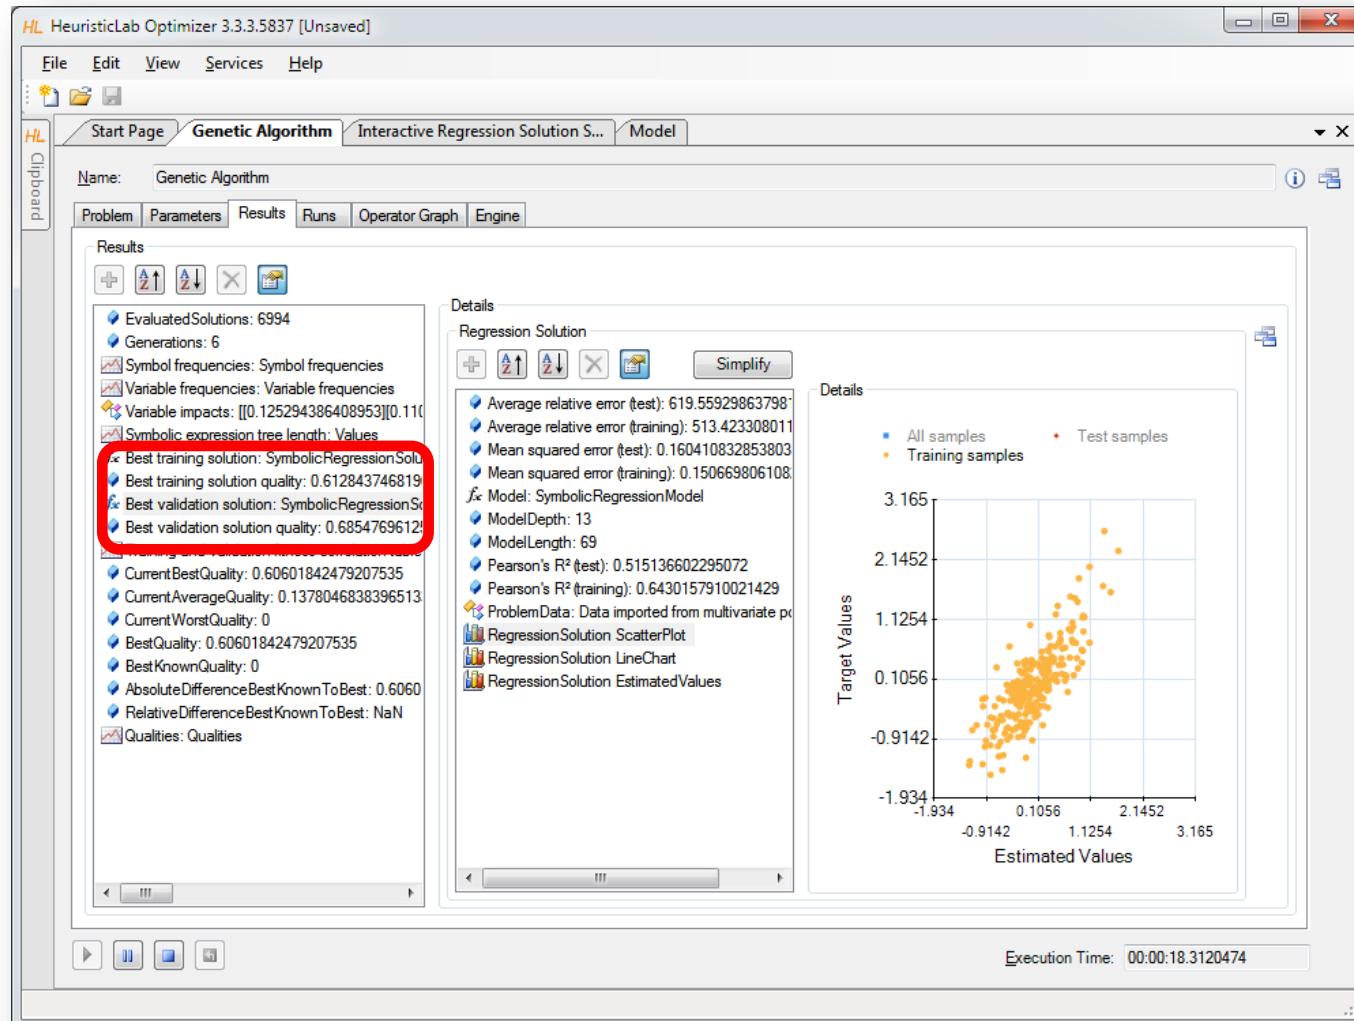

- Demonstration
  - Configuration of a validation set
  - Inspection of best solution on validation set
  - Analysis of training- and validation fitness correlation
  - Cross-validation
    - Configuration
    - Analysis of results

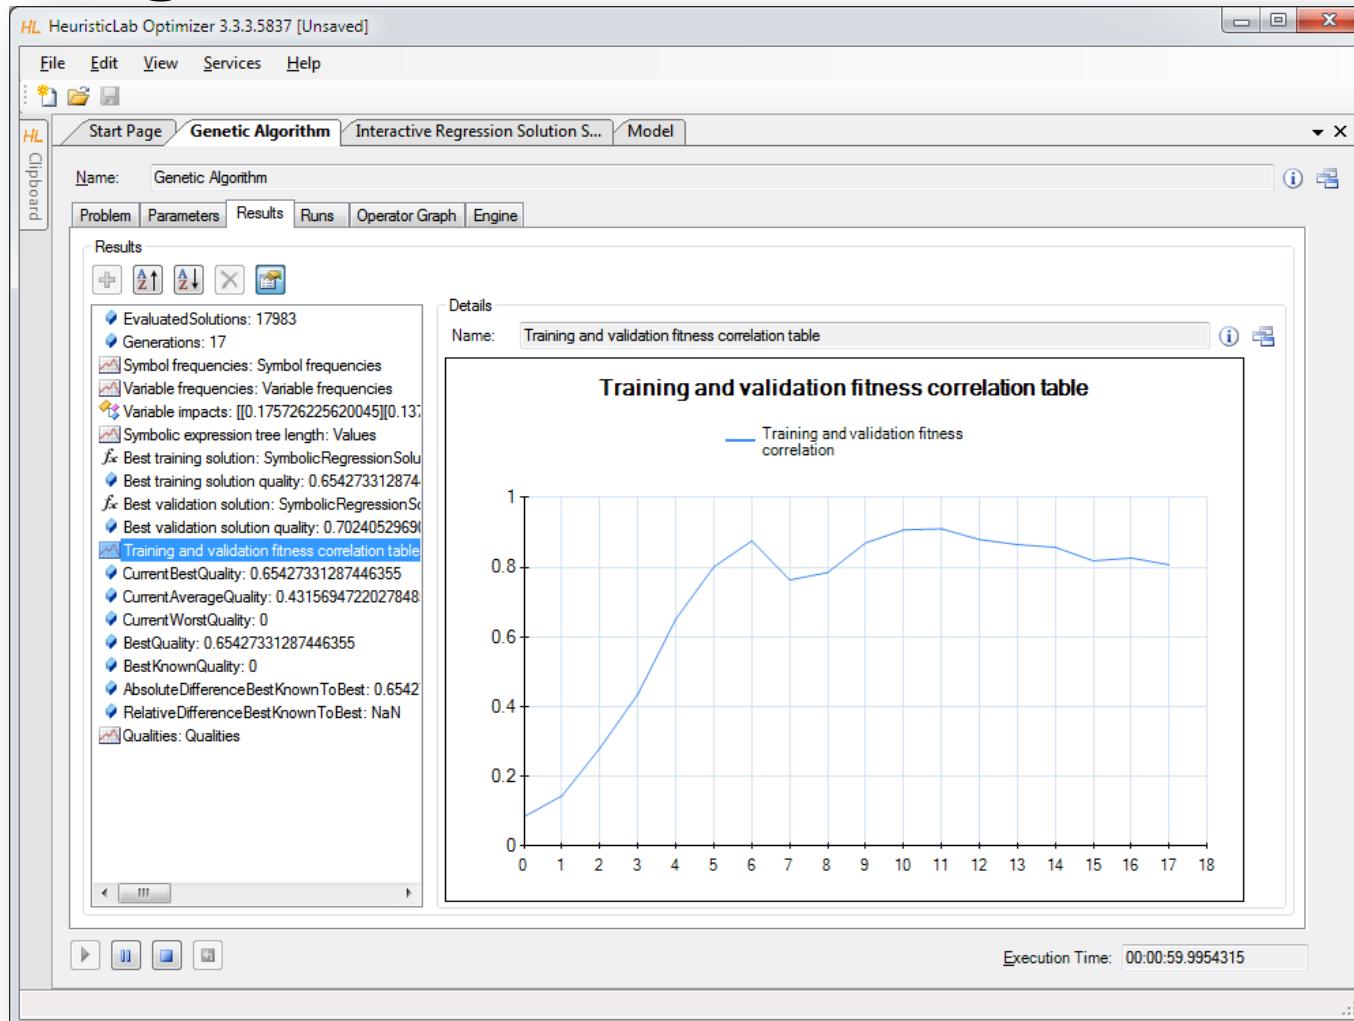

# Configuration of Validation Partition

# Inspect Best Model on Validation Partition

# Inspect Linechart of Correlation of Training and Validation Fitness

# Agenda

- Objectives of the Tutorial
- Introduction
- Where to get HeuristicLab?
- Plugin Infrastructure
- Graphical User Interface
- Available Algorithms & Problems
- **Demonstration Part I: Working with HeuristicLab**
- **Demonstration Part II: Data-based Modeling**
- Some Additional Features
- Planned Features
- Team
- Suggested Readings
- Bibliography
- Questions & Answers

# Some Additional Features

- HeuristicLab Hive
  - parallel and distributed execution of algorithms and experiments on many computers in a network
- Optimization Knowledge Base (OKB)
  - database to store algorithms, problems, parameters and results
  - open to the public
  - open for other frameworks
  - analyze and store characteristics of problem instances and problem classes
- External solution evaluation and simulation-based optimization
  - interface to couple HeuristicLab with other applications (MATLAB, Simulink, SciLab, AnyLogic, ...)
  - supports different protocols (command line parameters, TCP, ...)
- Parameter grid tests and meta-optimization
  - automatically create experiments to test large ranges of parameters
  - apply heuristic optimization algorithms to find optimal parameter settings for heuristic optimization algorithms

# Planned Features

- Algorithms & Problems
  - steady-state genetic algorithm
  - unified tabu search for vehicle routing
  - estimation of distribution algorithms
  - evolution of arbitrary code (Robocode, controller, etc.)
  - ...
- Cloud Computing
  - port HeuristicLab Hive to Windows Azure
- Statistics
  - implement statistical tests and automated statistical analysis
- Have a look at the HeuristicLab roadmap
  - <http://dev.heuristiclab.com/trac.cgi/roadmap>
- Any other ideas, requests or recommendations?
  - join our HeuristicLab Google group [heuristiclab@googlegroups.com](mailto:heuristiclab@googlegroups.com)
  - write an e-mail to [support@heuristiclab.com](mailto:support@heuristiclab.com)
