Instructor Biographies

- Stefan Wagner
 - Full professor for complex software systems (since 2009)
University of Applied Sciences Upper Austria
 - Co-founder of the HEAL research group
 - Project manager and chief architect of HeuristicLab
 - PhD in technical sciences (2009)
Johannes Kepler University Linz, Austria
 - Associate professor (2005 – 2009)
University of Applied Sciences Upper Austria
 - <http://heal.heuristiclab.com/team/wagner>
- Gabriel Kronberger
 - Full professor for business intelligence (since 2011)
University of Applied Sciences Upper Austria
 - Member of the HEAL research group
 - Architect of HeuristicLab
 - PhD in technical sciences (2010)
Johannes Kepler University Linz, Austria
 - Research assistant (2005 – 2011)
University of Applied Sciences Upper Austria
 - <http://heal.heuristiclab.com/team/kronberger>

Agenda

- Objectives of the Tutorial
- Introduction
- Where to get HeuristicLab?
- Plugin Infrastructure
- Graphical User Interface
- Available Algorithms & Problems
- **Demonstration Part I: Working with HeuristicLab**
- **Demonstration Part II: Data-based Modeling**
- Some Additional Features
- Planned Features
- Team
- Suggested Readings
- Bibliography
- Questions & Answers

Objectives of the Tutorial

- Introduce general motivation and design principles of HeuristicLab
- Show where to get HeuristicLab
- Explain basic GUI usability concepts
- Demonstrate basic features
- Demonstrate editing and analysis of optimization experiments
- Demonstrate custom algorithms and graphical algorithm designer
- Demonstrate data-based modeling features
- Outline some additional features

Introduction

- Motivation and Goals
 - graphical user interface
 - paradigm independence
 - multiple algorithms and problems
 - large scale experiments and analyses
 - parallelization
 - extensibility, flexibility and reusability
 - visual and interactive algorithm development
 - multiple layers of abstraction
- Facts
 - development of HeuristicLab started in 2002
 - based on Microsoft .NET and C#
 - used in research and education
 - second place at the *Microsoft Innovation Award 2009*
 - open source (GNU General Public License)
 - version 3.3.0 released on May 18th, 2010
 - latest version 3.3.9 released on October 11th, 2013

Where to get HeuristicLab?

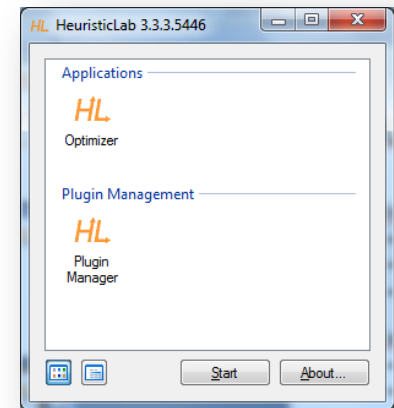

- Download binaries
 - deployed as ZIP archives
 - latest stable version 3.3.9
 - released on October 11th, 2013
 - daily trunk builds
 - <http://dev.heuristiclab.com/download>
- Check out sources
 - SVN repository
 - HeuristicLab 3.3.9 tag
 - <http://dev.heuristiclab.com/svn/hl/core/tags/3.3.9>
 - current development trunk
 - <http://dev.heuristiclab.com/svn/hl/core/trunk>
- License
 - GNU General Public License (Version 3)
- System requirements
 - Microsoft .NET Framework 4.0 Full Version
 - enough RAM and CPU power ;-)

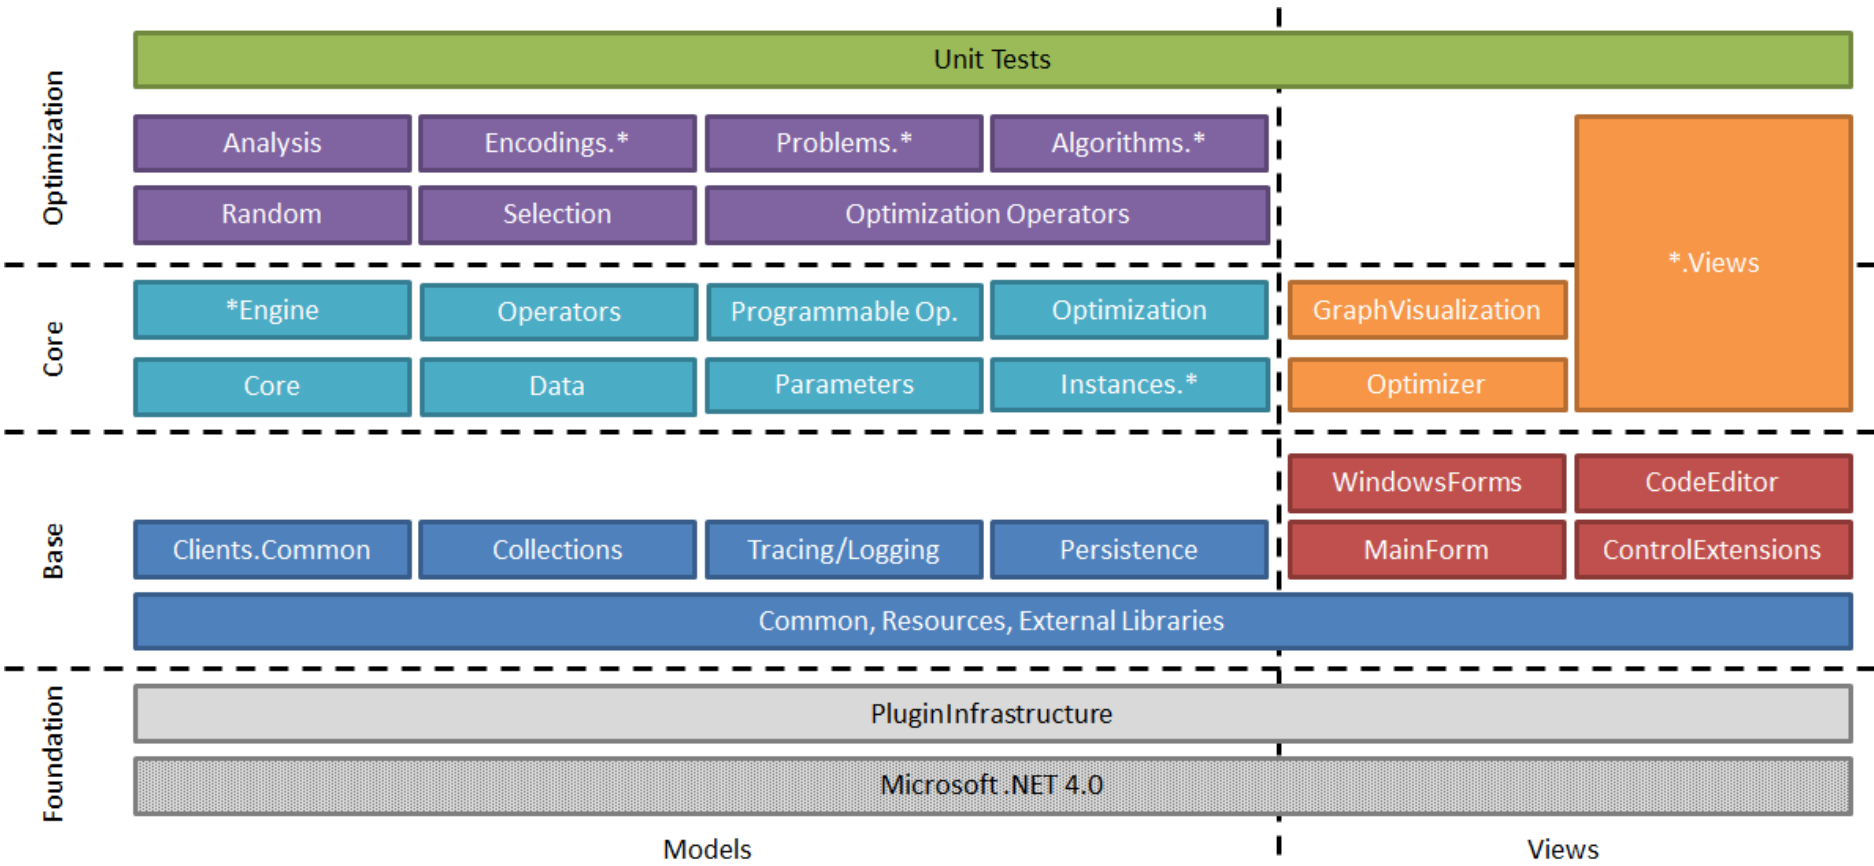

Plugin Infrastructure

- HeuristicLab consists of many assemblies
 - 132 plugins in HeuristicLab 3.3.9
 - plugins can be loaded or unloaded at runtime
 - plugins can be updated via internet
 - application plugins provide GUI frontends
- Extensibility
 - developing and deploying new plugins is easy
 - dependencies are explicitly defined, automatically checked and resolved
 - automatic discovery of interface implementations (service locator pattern)
- Plugin Manager
 - GUI to check, install, update or delete plugins

Plugin Architecture

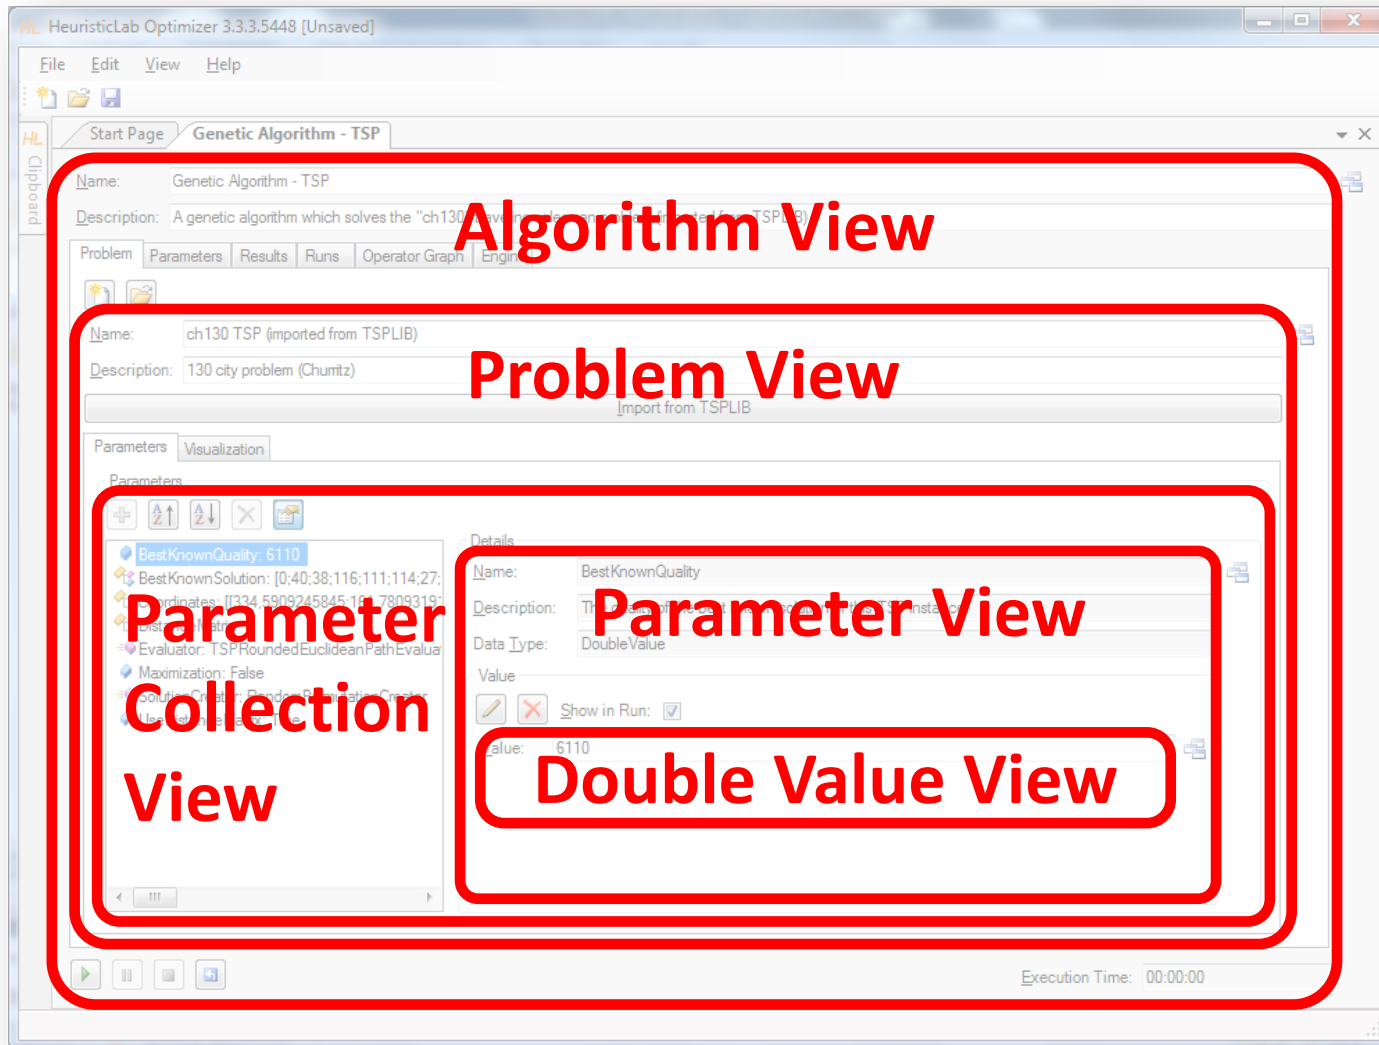

Graphical User Interface

- HeuristicLab GUI is made up of views
 - views are visual representations of content objects
 - views are composed in the same way as their content
 - views and content objects are loosely coupled
 - multiple different views may exist for the same content
- Drag & Drop
 - views support drag & drop operations
 - content objects can be copied or moved (shift key)
 - enabled for collection items and content objects

Graphical User Interface

Graphical User Interface

- ViewHost
 - control which hosts views
 - right-click on windows icon to switch views
 - double-click on windows icon to open another view
 - drag & drop windows icon to copy contents

Available Algorithms & Problems

Algorithms

- Evolution Strategy
- Genetic Algorithm
- Genetic Programming
- Hungarian Algorithm
- Island Genetic Algorithm
- Island Offspring Selection Genetic Algorithm
- LM-BFGS
- Local Search
- NSGA-II
- Offspring Selection Genetic Algorithm
- Particle Swarm Optimization
- Relevant Alleles Preserving GA (RAPGA)
- Robust Taboo Search
- SASEGASA
- Scatter Search
- Simulated Annealing
- Tabu Search
- User-defined Algorithm
- Variable Neighborhood Search
- Performance Benchmarks
- Cross Validation
- Gaussian Process Regression and Least-Squares Classification
- k-Means
- Linear Discriminant Analysis
- Linear Regression
- Multinomial Logit Classification
- Nearest Neighbor Regression and Classification
- Neural Network Regression and Classification
- Random Forest Regression and Classification
- Support Vector Regression and Classification

Problems

- Artificial Ant
- Classification
- Clustering
- External Evaluation Problem
- Job Shop Scheduling
- Knapsack
- Lawn Mower
- Linear Assignment
- OneMax
- Quadratic Assignment
- Regression
- Single-Objective Test Function
- Symbolic Classification
- Symbolic Regression
- Symbolic Time-Series Prognosis
- Traveling Salesman
- User-defined Problem
- Vehicle Routing

Agenda

- Objectives of the Tutorial

- Questions & Answers

Demonstration Part I: Working with HeuristicLab

- Create, Parameterize and Execute Algorithms
- Save and Load Items
- Create Batch Runs and Experiments
- Multi-core CPUs and Parallelization
- Analyze Runs
- Analyzers
- Building User-Defined Algorithms

HeuristicLab Optimizer

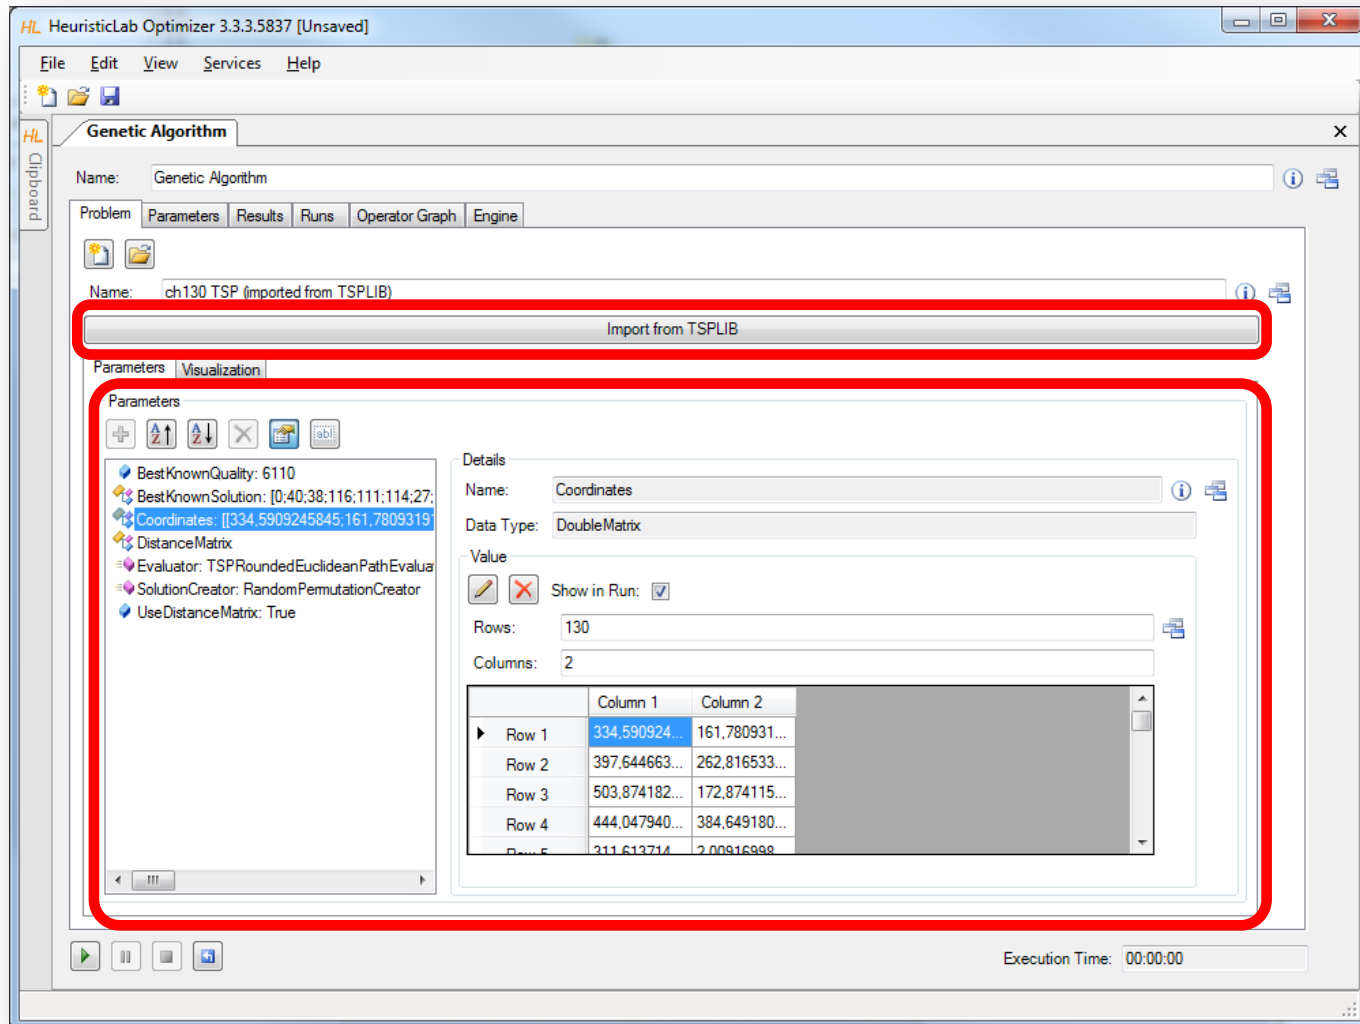

Create Algorithm

Create or Load Problem

Import or Parameterize Problem Data

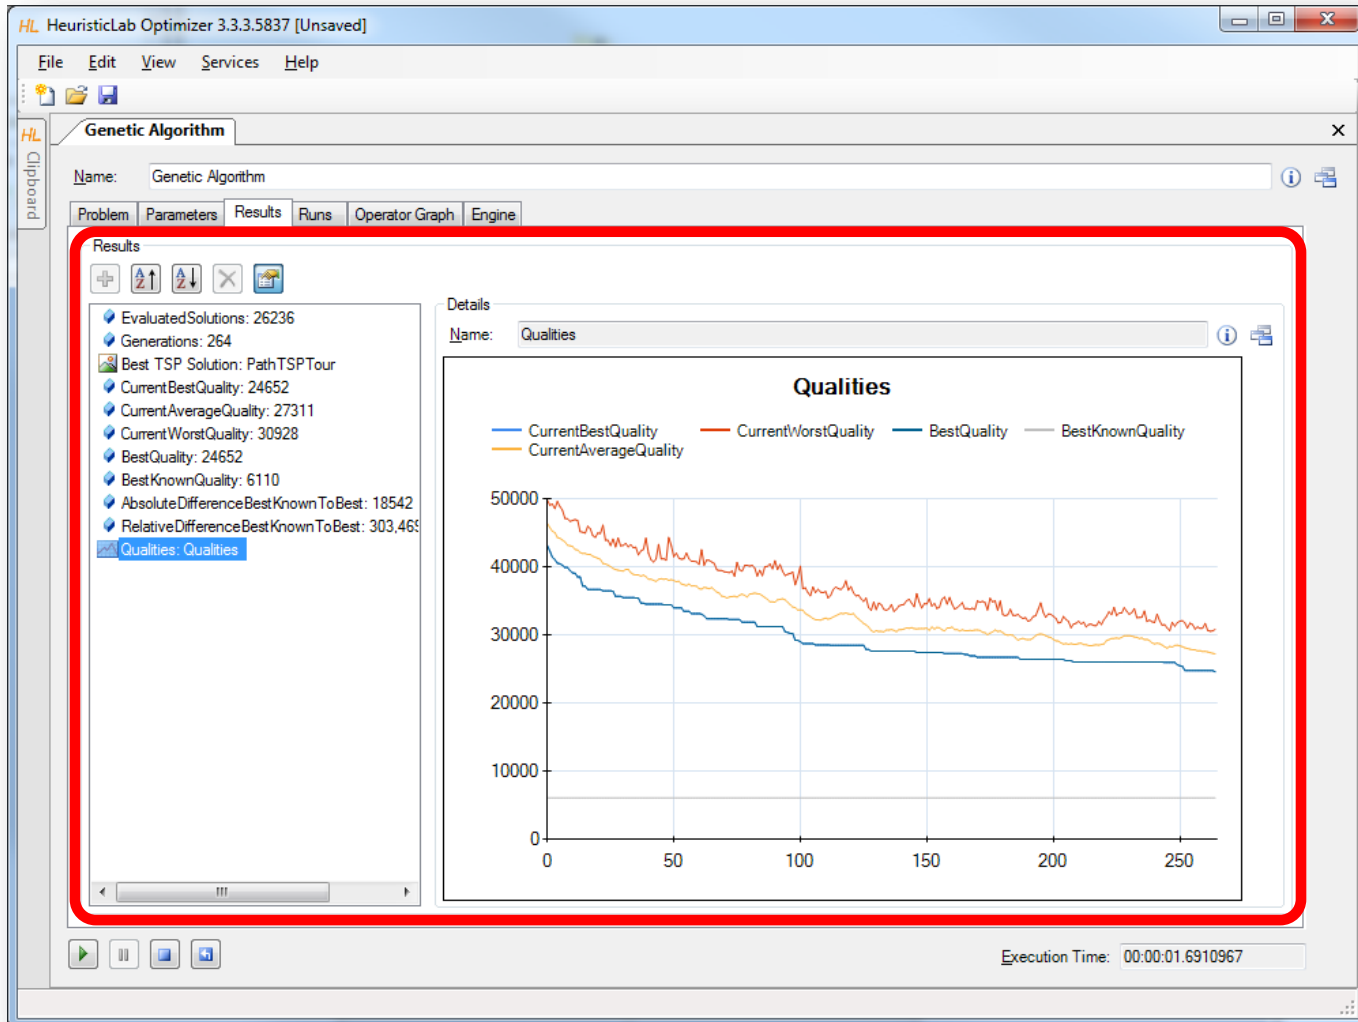

Parameterize Algorithm

Start, Pause, Resume, Stop and Reset

Inspect Results

Compare Runs

- A run is created each time when the algorithm is stopped
 - runs contain all results and parameter settings
 - previous results are not forgotten and can be compared

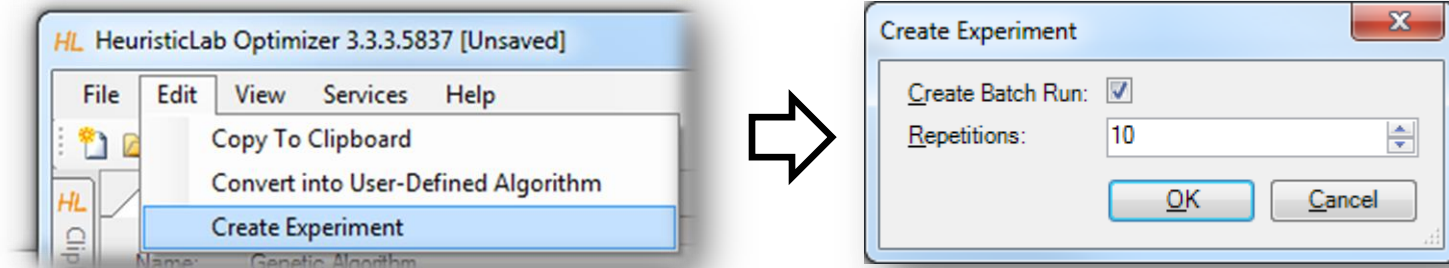

Save and Load

- Save to and load from disk
 - HeuristicLab items (i.e., algorithms, problems, experiments, ...) can be saved to and loaded from a file
 - algorithms can be paused, saved, loaded and resumed
 - data format is custom compressed XML
 - saving and loading files might take several minutes
 - saving and loading large experiments requires some memory

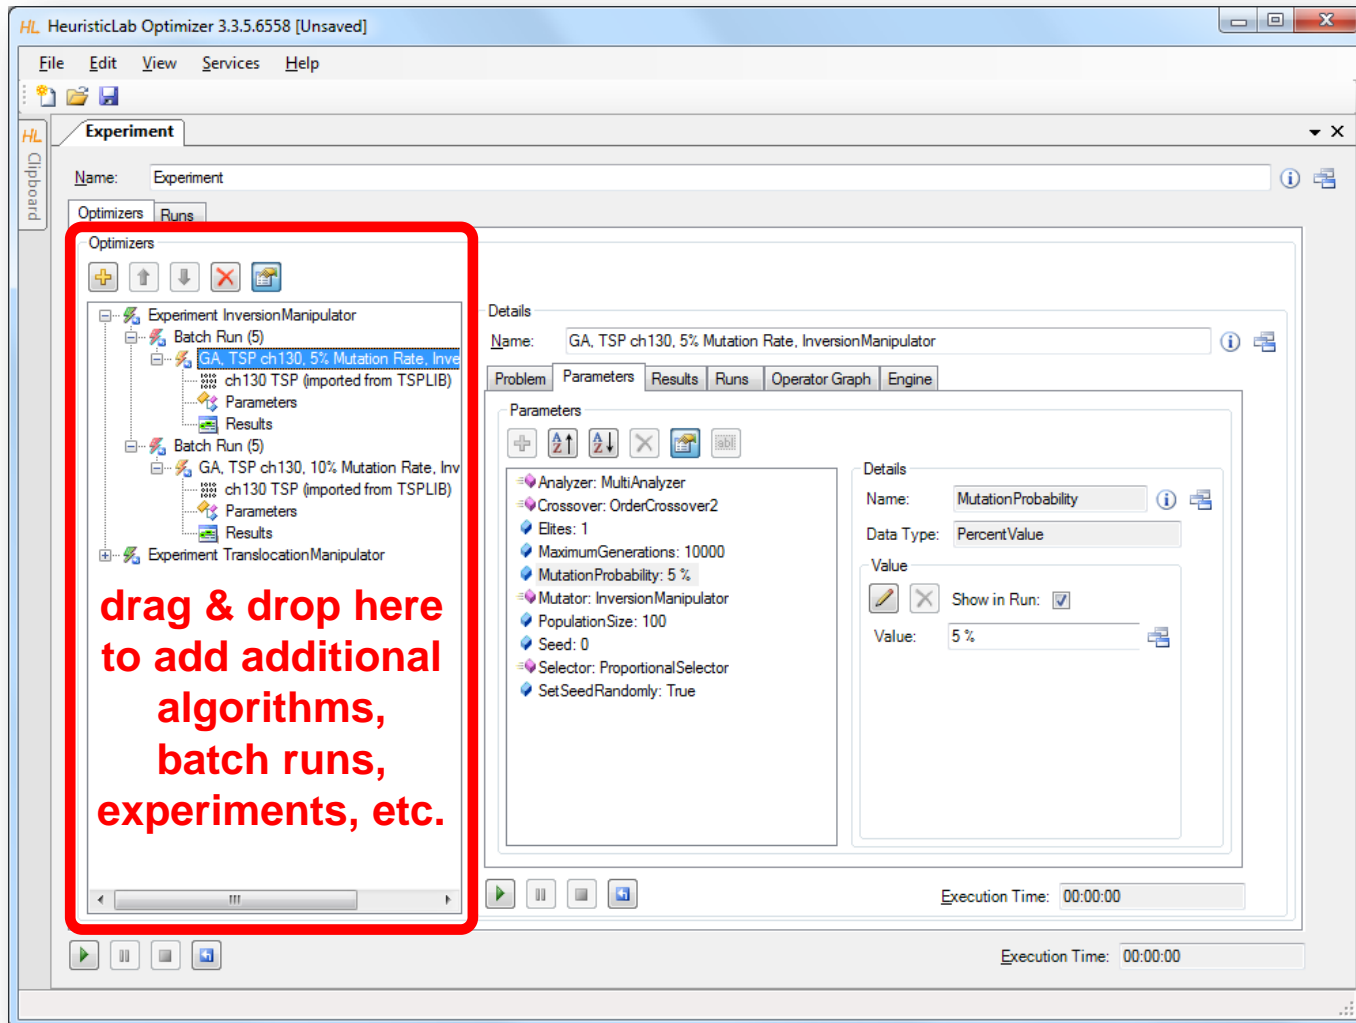

Create Batch Runs and Experiments

- Batch runs
 - execute the same optimizer (e.g. algorithm, batch run, experiment) several times
- Experiments
 - execute different optimizers
 - suitable for large scale algorithm comparison and analysis
- Experiments and batch runs can be nested
- Generated runs can be compared afterwards

Create Batch Runs and Experiments

Clipboard

The screenshot shows the HeuristicLab Optimizer interface. A red box highlights the Clipboard window on the left, which contains a list of items: ch130 TSP (imported from TSPLIB), Experiment, Genetic Algorithm, Genetic Algorithm Run 1, and kroA200 TSP (imported from TSPLIB). A red text overlay on the clipboard window reads: **drag & drop here to add algorithms, problems, batch runs, experiments, etc.**

The main window displays the configuration for a Genetic Algorithm. The Name is "Genetic Algorithm". The Problem is "ch130 TSP (imported from TSPLIB)". The Parameters tab is active, showing the following details:

- BestKnownQuality: 6110
- BestKnownSolution: [0;40;38;116;111;114;27;
- Coordinates: [[334,5909245845;161,7809319;
- DistanceMatrix
- Evaluator: TSPRoundedEuclideanPathEvalua
- Maximization: False
- SolutionCreator: RandomPemutationCreator
- UseDistanceMatrix: True

The Execution Time is 00:01:02.2315595.

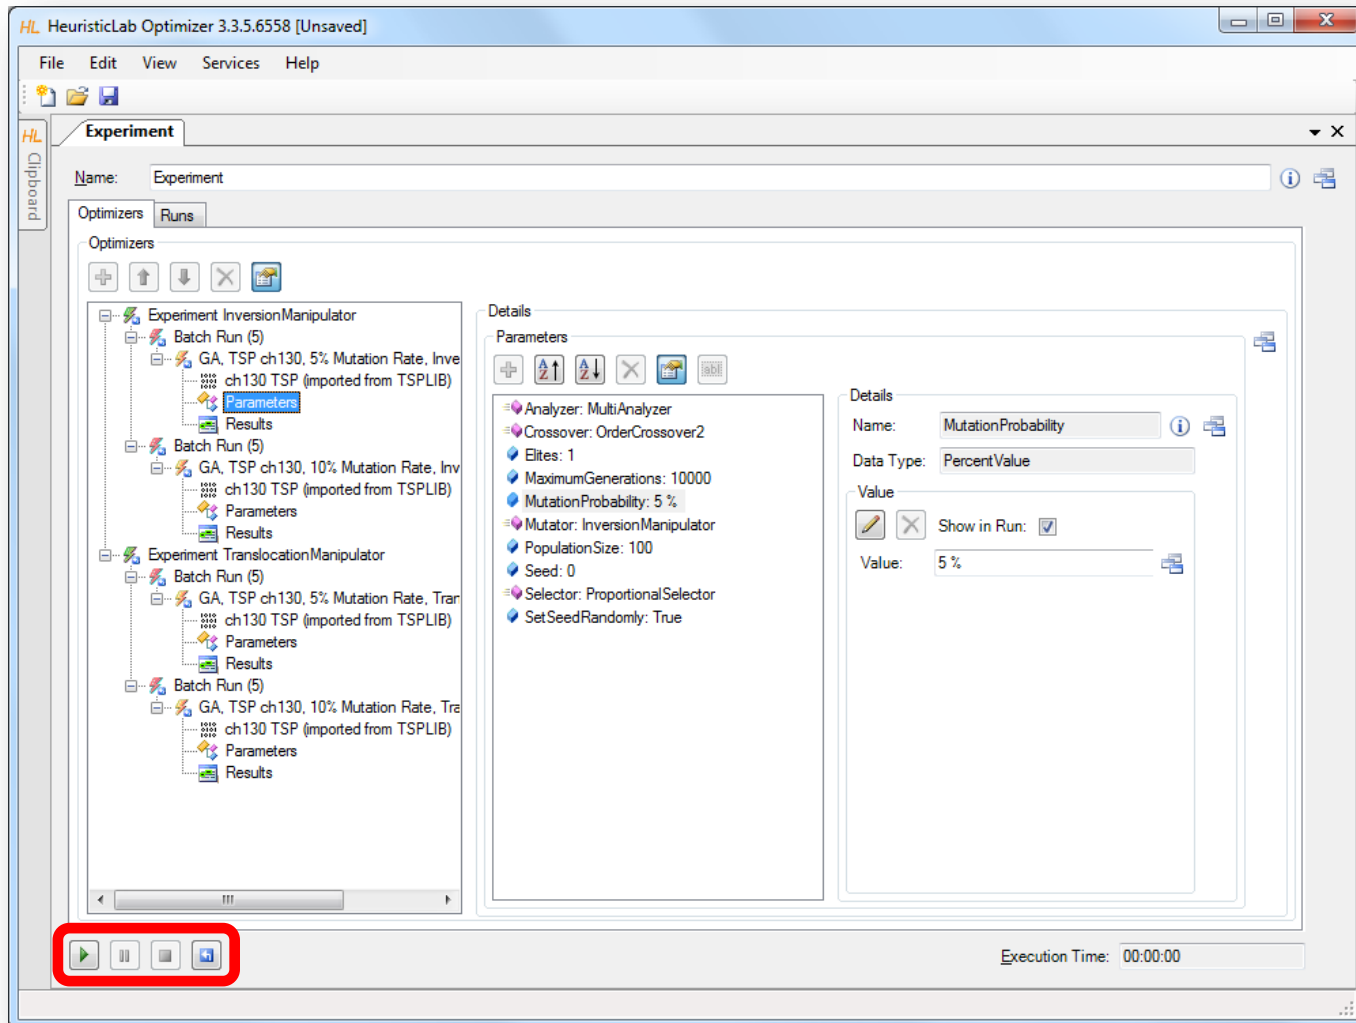

Clipboard

- Store items
 - click on the buttons to add or remove items
 - drag & drop items on the clipboard
 - use the menu to add a copy of a shown item to the clipboard

- Show items
 - double-click on an item in the clipboard to show its view
- Save and restore clipboard content
 - click on the save button to write the clipboard content to disk
 - clipboard is automatically restored when HeuristicLab is started the next time

Start, Pause, Resume, Stop, Reset

Compare Runs

The screenshot displays the HeuristicLab Optimizer interface. The main window is titled "HL HeuristicLab Optimizer 3.3.5.6558 [C:\Users\p21298\Documents\Demo Experiment (Results).hl]". The interface is divided into several sections:

- Runs List:** A list of runs is shown, each with a small icon and a description. The runs are filtered to show only those with a 5% mutation rate. The list includes runs with parameters like "GA, TSP ch130, 5% Mutation Rate, InversionManipulator Run 1".
- Details Panel:** The details for the selected run are shown. The name is "GA, TSP ch130, 5% Mutation Rate, InversionManipulator Run 1". The color is set to black.
- Parameters & Results:** A list of results is shown, including "Best TSP Solution", "BestKnownQuality", "BestQuality", "CurrentAverageQuality", "CurrentBestQuality", "CurrentWorstQuality", "EvaluatedSolutions", "Execution Time", "Generations", and "Qualities".
- Qualities Graph:** A line graph titled "Qualities" shows the performance of the run over 10,000 generations. The y-axis represents quality, ranging from 0 to 60,000. The x-axis represents generations, ranging from 0 to 10,000. The graph shows four data series: CurrentBestQuality (blue), CurrentAverageQuality (orange), CurrentWorstQuality (red), and BestKnownQuality (grey). The CurrentBestQuality and CurrentAverageQuality lines show a sharp initial drop from approximately 60,000 to around 10,000 within the first 1,000 generations, followed by a period of relative stability with minor fluctuations.

At the bottom of the window, the execution time is displayed as "03:55:16.2570011".

Analyze Runs

- HeuristicLab provides interactive views to analyze and compare all runs of a run collection
 - textual analysis
 - RunCollection Tabular View
 - graphical analysis
 - RunCollection BubbleChart
 - RunCollection BoxPlots
- Filtering is automatically applied to all open run collection views

RunCollection Tabular View

- Sort columns
 - click on column header to sort column
 - Ctrl-click on column header to sort multiple columns
- Show or hide columns
 - right-click on table to open dialog to show or hide columns
- Compute statistical values
 - select multiple numerical values to see count, sum, minimum, maximum, average and standard deviation
- Select, copy and paste into other applications

RunCollection BubbleChart

RunCollection BubbleChart

- Choose values to plot
 - choose which values to show on the x-axis, the y-axis and as bubble size
 - possible values are all parameter settings and results
- Add jitter
 - add jitter to separate overlapping bubbles
- Zoom in and out
 - click on Zoom and click and drag in the chart area to zoom in
 - double click on the chart area background or on the circle buttons beside the scroll bars to zoom out
- Color bubbles
 - click on Select, choose a color and click and drag in the chart area to select and color bubbles
 - apply coloring automatically by clicking on the axis coloring buttons
- Show runs
 - double click on a bubble to open its run
- Export image
 - right-click to open context menu to copy or save image
 - save image as pixel (BMP, JPG, PNG, GIF, TIF) or vector graphics (EMF)
- Show box plots
 - right-click to open context menu to show box plots view

RunCollection BoxPlots

RunCollection BoxPlots

- Choose values to plot
 - choose which values to show on the x-axis and y-axis
 - possible values are all parameter settings and results
- Zoom in and out
 - click on Zoom and click and drag in the chart area to zoom in
 - double click on the chart area background or on the circle buttons beside the scroll bars to zoom out
- Show or hide statistical values
 - click on the lower left button to show or hide statistical values
- Export image
 - right-click to open context menu to copy or save image
 - save image as pixel (BMP, JPG, PNG, GIF, TIF) or vector graphics (EMF)

Filter Runs

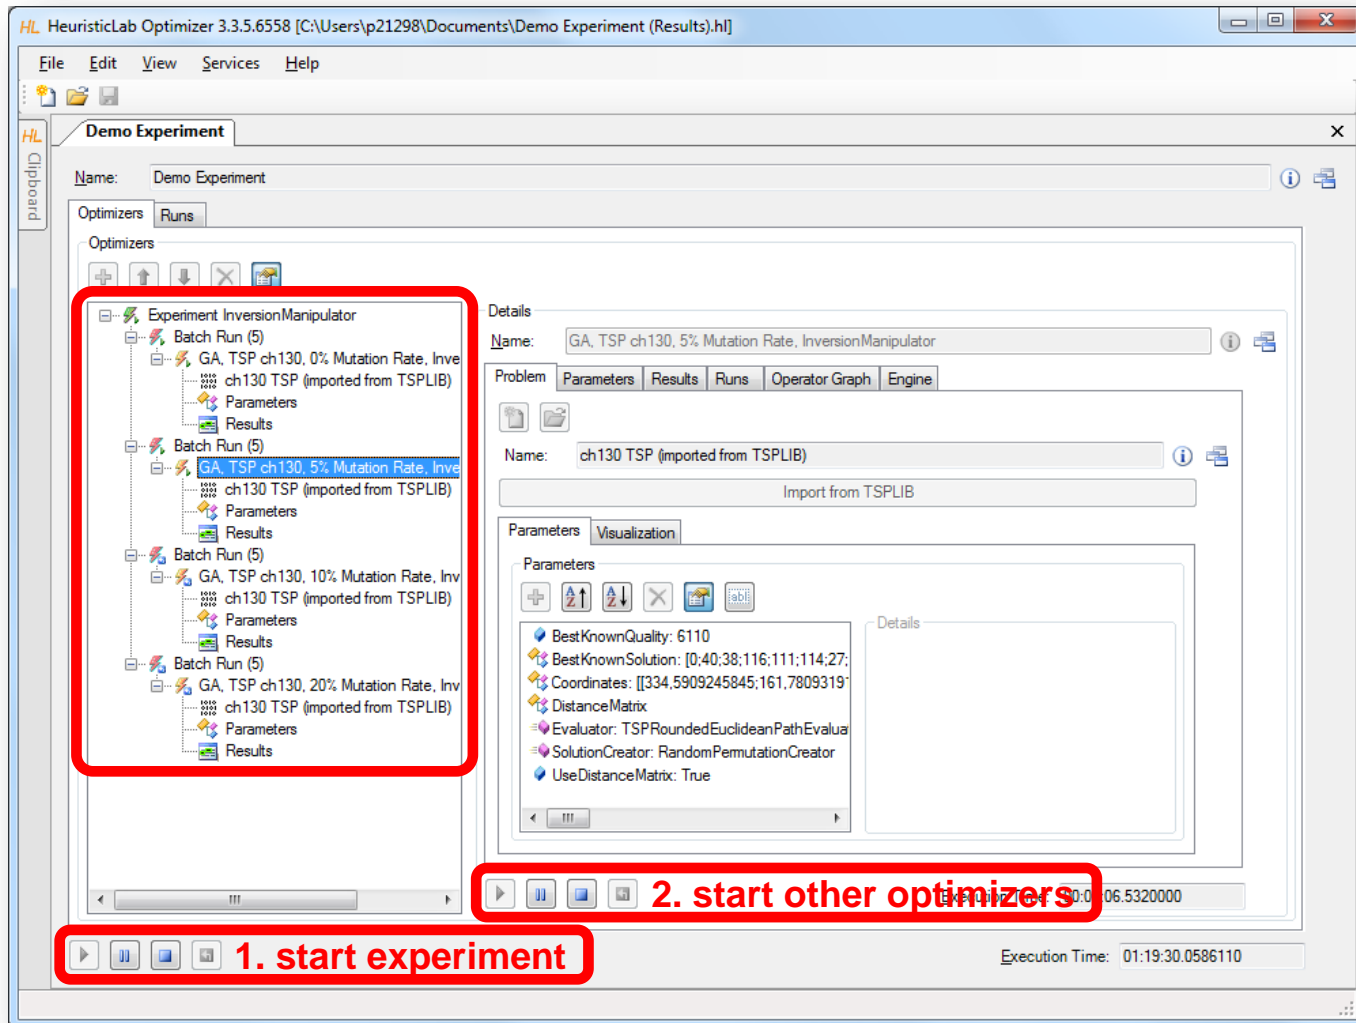

Multi-core CPUs and Parallelization

- Parallel execution of optimizers in experiments
 - optimizers in an experiment are executed sequentially from top to bottom per default
 - experiments support parallel execution of their optimizers
 - select a not yet executed optimizer and start it manually to utilize another core
 - execution of one of the next optimizers is started automatically after an optimizer is finished
- Parallel execution of algorithms
 - HeuristicLab provides special operators for parallelization
 - engines decide how to execute parallel operations
 - sequential engine executes everything sequentially
 - parallel engine executes parallel operations on multiple cores
 - Hive engine (under development) executes parallel operations on multiple computers
 - all implemented algorithms support parallel solution evaluation

Parallel Execution of Experiments

Parallel Execution of Algorithms

Analyzers

- Special operators for analysis purposes
 - are executed after each iteration
 - serve as general purpose extension points of algorithms
 - can be selected and parameterized in the algorithm
 - perform algorithm-specific and/or problem-specific tasks
 - some analyzers are quite costly regarding runtime and memory
 - implementing and adding custom analyzers is easy
- Examples
 - TSPAlleleFrequencyAnalyzer
 - TSPPopulationDiversityAnalyzer
 - SuccessfulOffspringAnalyzer
 - SymbolicDataAnalysisVariableFrequencyAnalyzer
 - SymbolicRegressionSingleObjectiveTrainingBestSolutionAnalyzer
 - ...

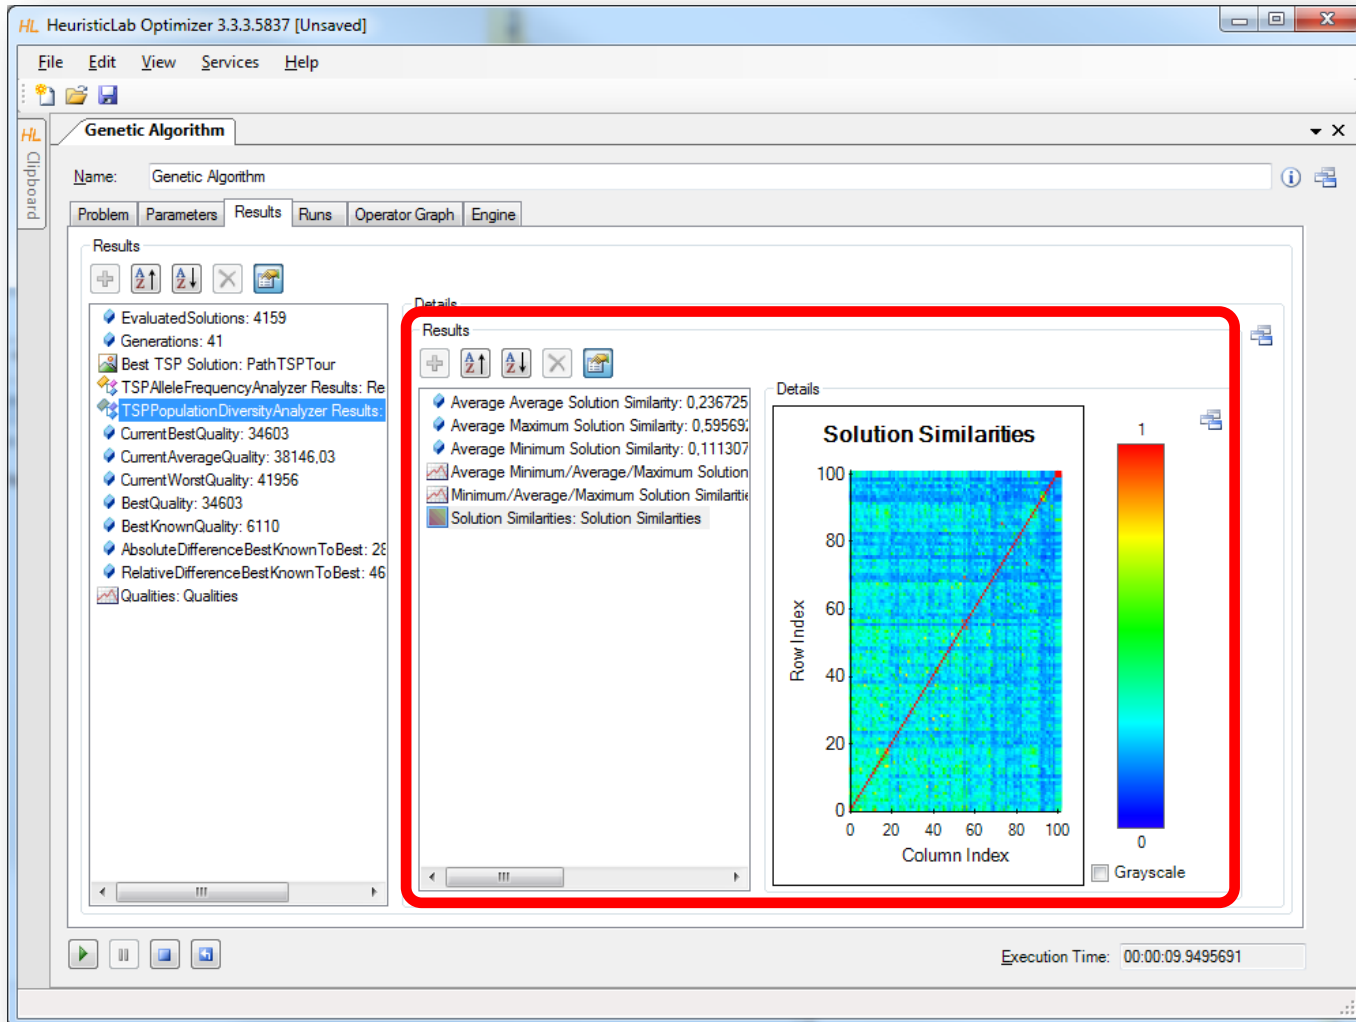

Analyzers

TSPAlleleFrequencyAnalyzer

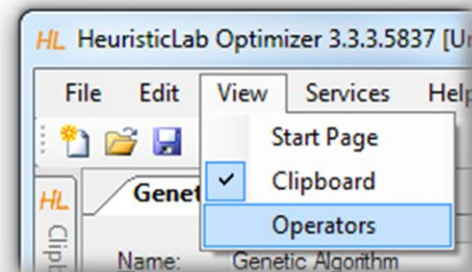

TSP Population Diversity Analyzer

Building User-Defined Algorithms

- Operator graphs
 - algorithms are represented as operator graphs
 - operator graphs of user-defined algorithms can be changed
 - algorithms can be defined in the graphical algorithm designer
 - use the menu to convert a standard algorithm into a user-defined algorithm

- Operators sidebar
 - drag & drop operators into an operator graph
- Programmable operators
 - add programmable operators in order to implement custom logic in an algorithm
 - no additional development environment needed
- Debug algorithms
 - use the debug engine to obtain detailed information during algorithm execution

Building User-Defined Algorithms

The screenshot displays the HeuristicLab Optimizer 3.3.3.5837 interface. The main window is titled "Genetic Algorithm" and shows a configuration for a genetic algorithm. The "Operator Graph" tab is active, showing a flow from a "ResultsCollector" operator to a "GeneticAlgorithmMainLoop" operator. The "Available Operators" list on the left includes various selection and replacement operators, with "ProportionalSelector" highlighted. The "Details" section at the bottom is empty. The execution time is shown as 00:00:03.5182012.

- Questions & Answers

Demonstration Part II: Data-based Modeling

- Introduction
- Regression with HeuristicLab
- Model simplification and export
- Variable relevance analysis
- Classification with HeuristicLab

Introduction to Data-based Modeling

- Dataset: Matrix $(x_{i,j})_{i=1..N, j=1..K}$
 - N observations of K input variables
 - $x_{i,j}$ = i-th observation of j-th variable
 - Additionally: Vector of labels $(y_1 \dots y_N)^T$
- Goal: learn association of input variable values to labels
- Common tasks
 - Regression (real-valued labels)
 - Classification (discrete labels)
 - Clustering (no labels, group similar observations)

Data-based Modeling Algorithms in HeuristicLab

- Symbolic regression and classification based on genetic programming
- External Libraries:
 - Support Vector Machines for Regression and Classification
 - Linear Regression
 - Linear Discriminate Analysis
 - K-Means clustering

Case Studies

- Demonstration
 - problem configuration
 - data import
 - target variable
 - input variables
 - data partitions (training and test)
 - analysis of results
 - accuracy metrics
 - visualization of model output

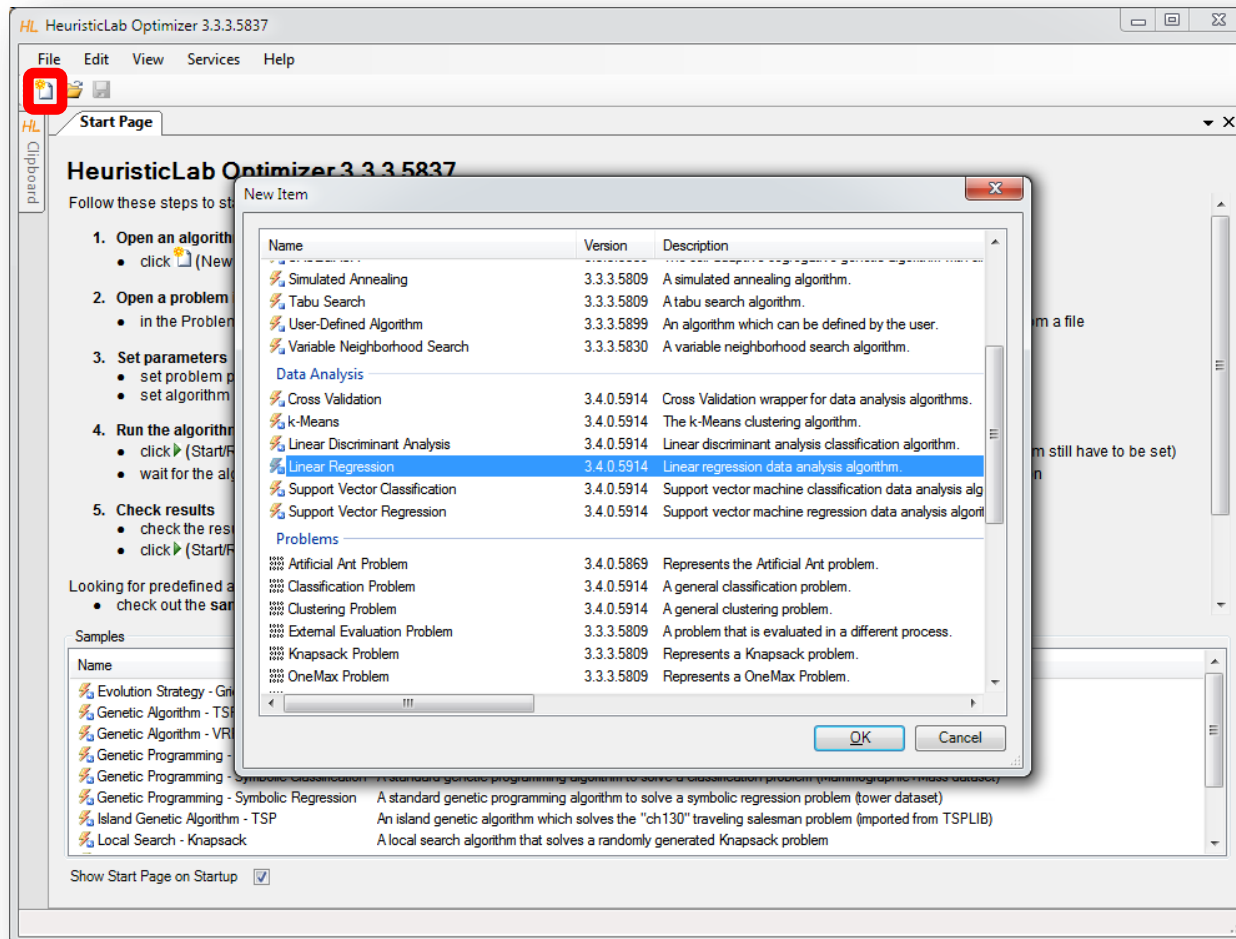

Case Study: Regression

- Poly-10 benchmark problem dataset
 - 10 input variables $x_1 \dots x_{10}$
 - $y = x_1 \cdot x_2 + x_3 \cdot x_4 + x_5 \cdot x_6 + x_1 \cdot x_7 \cdot x_9 + x_3 \cdot x_6 \cdot x_{10}$
 - non-linear modeling approach necessary
 - frequently used in GP literature
 - download
<http://dev.heuristiclab.com/AdditionalMaterial#GECCO2012>

Symbolic Regression with HeuristicLab

- Linear regression produced an inaccurate model.
- Next: produce a nonlinear symbolic regression model using genetic programming
- Genetic programming
 - evolve variable-length models
 - model representation: symbolic expression tree
 - structure and model parameters are evolved side-by-side
 - white-box models

Symbolic Regression with HeuristicLab

- Demonstration
 - problem configuration
 - function set and terminal set
 - model size constraints
 - Evaluation
- Algorithm configuration
 - selection
 - Mutation
- Analysis of results
 - model accuracy
 - model structure and parameters

Simplify

Manual Simplification

The screenshot displays the HeuristicLab Optimizer interface. The main window shows a tree diagram of a regression solution. The tree starts with an 'Addition' node at the top, which branches into 'Multiplication' and 'Subtraction'. The 'Subtraction' node further branches into 'Multiplication' and 'Subtraction'. The 'Multiplication' nodes lead to 'Division' and 'Addition' nodes, which eventually lead to leaf nodes containing numerical values and variables (e.g., $1.5602E+000 \times 4$, $4.3743E-001 \times 5$, etc.). A red box highlights a node with the value -9.14 . Another red box highlights a node with the value $2.6397E+0$ and the text 'double-click nodes' is written next to it. The right panel shows the 'Regression Solution' details, including metrics like Average relative error (test: 497.347029771583 %, training: 210.827113981827 %) and Mean squared error (test: 0.16222671796286908, training: 0.1407763050506841 %).

Automatic Symbolic Simplification

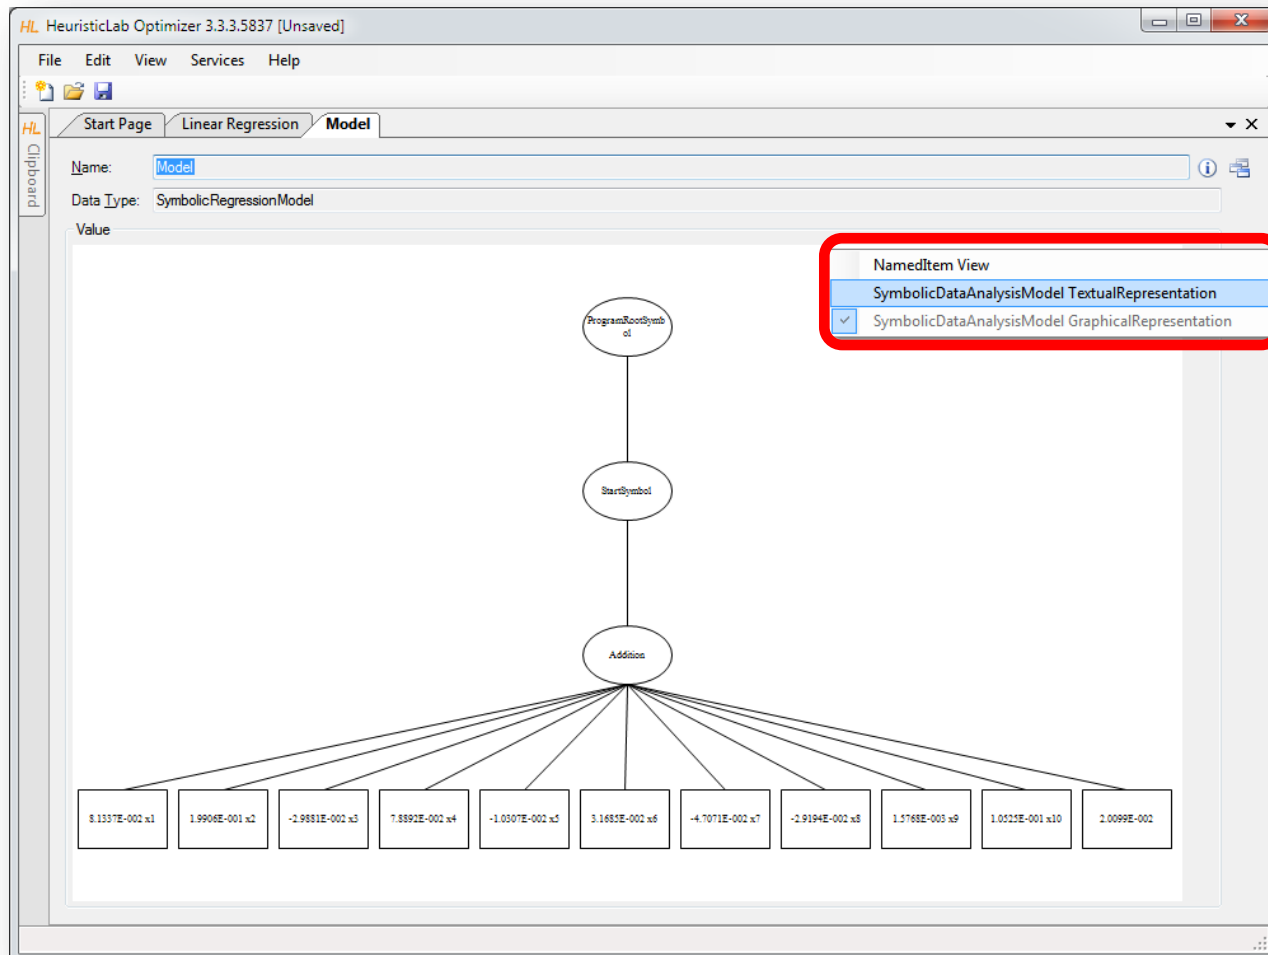

The screenshot displays the HeuristicLab Optimizer interface. The main window shows an "Interactive Regression Solution" with a symbolic regression tree. The tree consists of several nodes: an "Addition" node at the top, followed by a "Multiplication" node, another "Addition" node, and a "Division" node. The leaf nodes include mathematical expressions such as x^6 , x^5 , $1.5730E+$, x^4 , x^3 , $8.6714E-0$, x^4 , x^3 , $8.6714E-0$, $1.2752E$, x^4 , x^3 , $8.6714E-0$, $1.7065E-00$, $5.1438E-003$, $1.0000E+000$, $3.0083E+000$, and x^2 . A red box highlights the "Simplify" button at the bottom of the tree view.

The "Details" panel on the right provides the following information:

- Regression Solution
- Average relative error (test): 497.347029771588 %
- Average relative error (training): 210.827113981827 %
- Mean squared error (test): 0.16222671796286908
- Mean squared error (training): 0.1407763050506841
- Model: SymbolicRegressionModel
- ModelDepth: 10
- ModelLength: 34
- Pearson's R² (test): 0.50720401737421206
- Pearson's R² (training): 0.66645660997240852
- ProblemData: Data imported from multivariate poly-10
- RegressionSolution ScatterPlot
- RegressionSolution LineChart
- RegressionSolution EstimatedValues

Textual Representations Are Also Available

- Use *ViewHost* to switch to textual representation view.

Default Textual Representation for Model Export

Textual Representation for Export to LaTeX

The screenshot shows the HeuristicLab Optimizer interface. The 'Model' tab is active, and the 'Formatter' dropdown menu is highlighted with a red box, showing 'LaTeX String Formatter' selected. Below the dropdown, the LaTeX code for the model is displayed. A callout box highlights the resulting LaTeX output, which includes the equation for the result and a list of coefficients c_0 through c_{10} .

```
% needs \usepackage{amsmath}
\begin{align}
Result &= \text{left}(c_{(0)}x1(t) + c_{(1)}x2(t) + c_{(2)}x3(t) + c_{(3)}x4(t) + c_{(4)}x5(t) + c_{(5)}x6(t) + c_{(6)}x7(t) + c_{(7)}x8(t) + c_{(8)}x9(t) + c_{(9)}x10(t) + c_{(10)} \text{right} \\
c_{(0)} &= 0.0813371220642195 \\
c_{(1)} &= 0.199055016563887 \\
c_{(2)} &= -0.0298811744629839 \\
c_{(3)} &= 0.078891883541302 \\
c_{(4)} &= -0.0103065273366223 \\

Classification with HeuristicLab

- Symbolic classification
 - evolve discriminating function using GP
 - find thresholds to assign classes
- Demonstration
 - real world medical application
 - model accuracy
 - visualization of model output
 - discriminating function output
 - ROC-curve
 - confusion matrix

	Actual Class 0	Actual Class 1
Predicted Class 0	197	29
Predicted Class 1	64	190

Case Study: Classification

- Real world medical dataset (*Mammographic Mass*) from UCI Machine Learning Repository
 - data from non-invasive mammography screening
 - variables:
 - patient age
 - visual features of inspected mass lesions: shape, margin, density
 - target variable: severity (malignant, benign)
 - download
<http://dev.heuristiclab.com/AdditionalMaterial#GECCO2012>

Open Sample

The screenshot shows the 'Start Page' of the HeuristicLab Optimizer 3.3.3.5837. The page contains a list of five numbered steps for starting work with the optimizer, followed by a section for predefined algorithms. The 'Genetic Programming - Symbolic Classification' algorithm is highlighted in blue in the table below.

HeuristicLab Optimizer 3.3.3.5837

Follow these steps to start working with HeuristicLab Optimizer:

- 1. Open an algorithm**
 - click  (New Item) in the toolbar and select an algorithm or click  (Open File) in the toolbar and load an algorithm from a file
- 2. Open a problem in the algorithm**
 - in the Problem tab of the algorithm click  (New Problem) and select a problem or click  (Open Problem) and load a problem from a file
- 3. Set parameters**
 - set problem parameters in the Problem tab of the algorithm
 - set algorithm parameters in the Parameters tab of the algorithm
- 4. Run the algorithm**
 - click  (Start/Resume Algorithm) to execute the algorithm (if the button is grayed out some parameters of the algorithm or the problem still have to be set)
 - wait for the algorithm to terminate or click  (Pause Algorithm) to interrupt its execution or click  (Stop Algorithm) to stop its execution
- 5. Check results**
 - check the results on the Results tab of the algorithm
 - click  (Start/Resume Algorithm) to continue the algorithm or click  (Reset Algorithm) to prepare a new run

Looking for predefined algorithms which can be executed immediately?

- check out the **sample algorithms** below

Samples

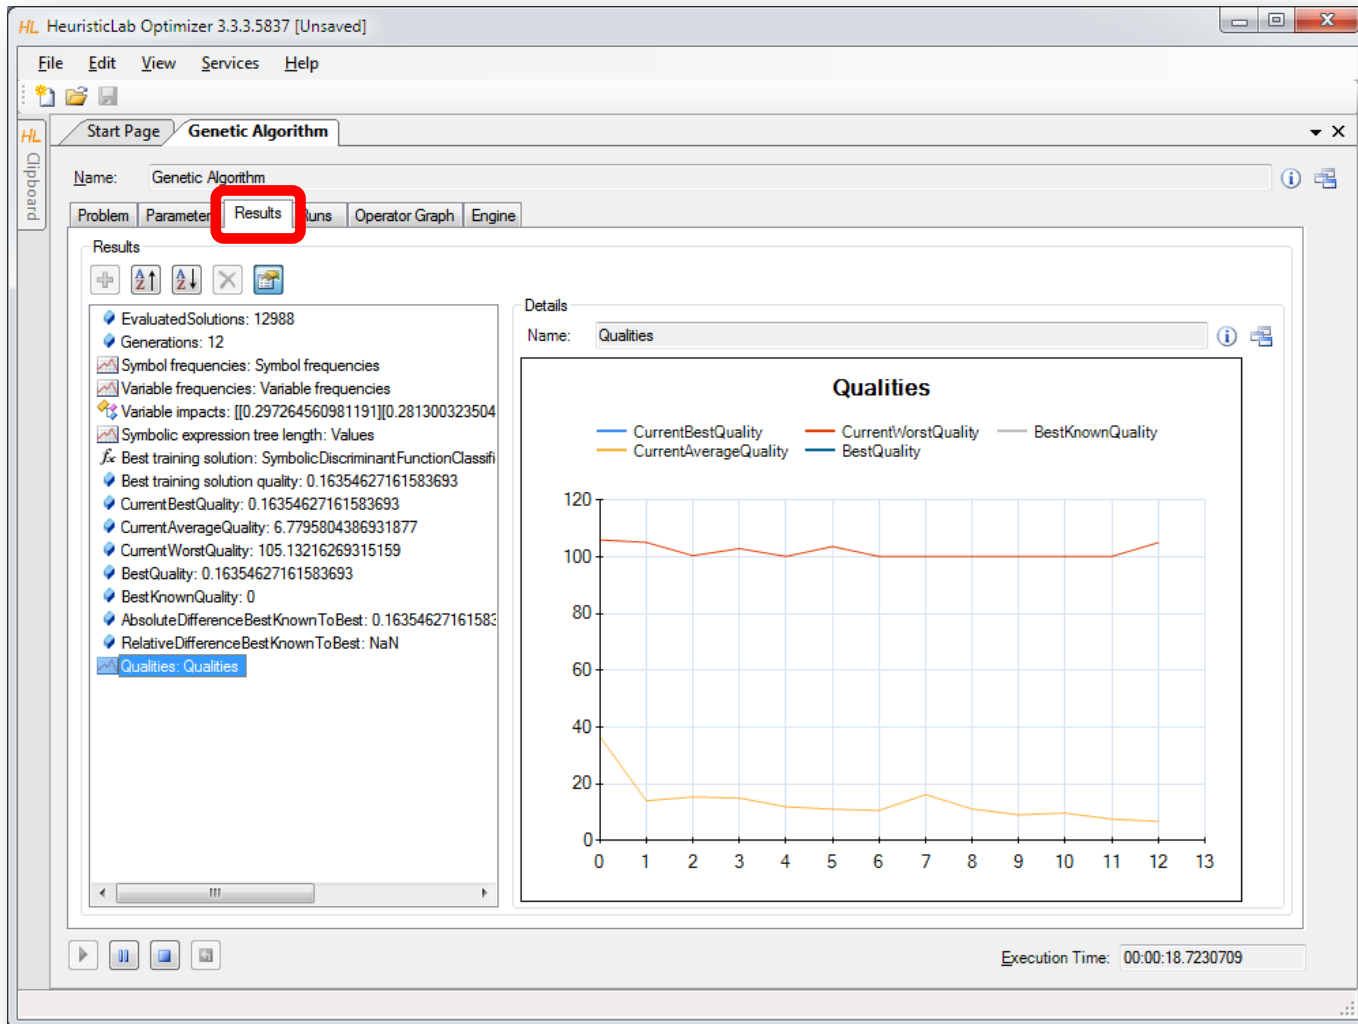

Name	Description
 Evolution Strategy - Griewank	An evolution strategy which solves the 10-dimensional Griewank test function
 Genetic Algorithm - TSP	A genetic algorithm which solves the "ch130" traveling salesman problem (imported from TSPLIB)
 Genetic Algorithm - VRP	A genetic algorithm which solves the "C101" vehicle routing problem (imported from Solomon)
 Genetic Programming - Artificial Ant	A standard genetic programming algorithm to solve the artificial ant problem (Santa-Fe trail)
 Genetic Programming - Symbolic Classification	A standard genetic programming algorithm to solve a classification problem (Mammographic+Mass dataset)
 Genetic Programming - Symbolic Regression	A standard genetic programming algorithm to solve a symbolic regression problem (tower dataset)
 Island Genetic Algorithm - TSP	An island genetic algorithm which solves the "ch130" traveling salesman problem (imported from TSPLIB)
 Local Search - Knapsack	A local search algorithm that solves a randomly generated Knapsack problem

Agenda

- Objectives of the Tutorial
- Introduction
- Where to get HeuristicLab?
- Plugin Infrastructure
- Graphical User Interface
- Available Algorithms & Problems
- **Demonstration Part I: Working with HeuristicLab**
- **Demonstration Part II: Data-based Modeling**
- Some Additional Features
- Planned Features
- Team
- Suggested Readings
- Bibliography
- Questions & Answers

Some Additional Features

- HeuristicLab Hive
 - parallel and distributed execution of algorithms and experiments on many computers in a network
- Optimization Knowledge Base (OKB)
 - database to store algorithms, problems, parameters and results
 - open to the public
 - open for other frameworks
 - analyze and store characteristics of problem instances and problem classes
- External solution evaluation and simulation-based optimization
 - interface to couple HeuristicLab with other applications (MATLAB, AnyLogic, ...)
 - supports different protocols (command line parameters, TCP, ...)
- Parameter grid tests and meta-optimization
 - automatically create experiments to test large ranges of parameters
 - apply heuristic optimization algorithms to find optimal parameter settings for heuristic optimization algorithms

Planned Features

- Algorithms & Problems
 - steady-state genetic algorithm
 - unified tabu search for vehicle routing
 - estimation of distribution algorithms
 - evolution of Robocode bots
 - ...
- Cloud Computing
 - port HeuristicLab Hive to Windows Azure
- Statistics
 - implement statistical tests and automated statistical analysis
- Have a look at the HeuristicLab roadmap
 - <http://dev.heuristiclab.com/trac/hl/core/roadmap>
- Any other ideas, requests or recommendations?
 - join our HeuristicLab Google group heuristiclab@googlegroups.com
 - write an e-mail to support@heuristiclab.com
